1. SAFETY REGULATIONS AND NOTES

Please read these operating instructions carefully before starting to work with the device. Observe the following warnings to prevent malfunctions or physical damage to both property and people.

These operating instructions are to be regarded as part of this device. If the device is sold or transferred, the operating instructions must accompany it.

These operating instructions may be duplicated and forwarded for information about potential dangers and their prevention.

1.1 Levels of hazard warnings

These operating instructions use the following hazard levels to indicate potentially hazardous situations and important safety regulations:

DANGER

Indicates an imminently hazardous situation which, if not avoided, will result in death or serious injury. Compliance with the measures is mandatory.

WARNING

Indicates a potentially hazardous situation which, if not avoided, could result in death or serious injury. Exercise extreme caution while working.

CAUTION

Indicates a potentially hazardous situation which, if not avoided, may result in minor or moderate injury or damage of property.

NOTE

A potentially harmful situation can occur and, if not avoided, can lead to property damage.

1.2 Staff qualification

Only specialised electrical personnel may install the device, perform the test run and work on the electrical system.

Only trained and authorised specialist personnel are permitted to

Only trained and authorised specialist personnel are permitted to transport, unpack, assemble, operate or maintain the device, or to use it in any other manner.

1.3 Basic safety rules

Any safety hazards stemming from the device must be re-evaluated once it is installed in the end device.

Observe the following when working on the unit:

⇒ Do not make any modifications, additions or conversions to the device without the approval of ebm-papst.

1.4 Electrical voltage

- \Rightarrow Check the electrical equipment of the device at regular intervals.
- ⇒ Remove loose connections and defective cables immediately.

WARNING

Terminals and connections have voltage even with a unit that is shut off

Electric shock

→ Wait for five minutes after disconnecting the voltage at all poles before touching the unit.

CAUTION

If control voltage is applied or a speed setpoint is stored, the motor automatically restarts, e.g. after a power failure. Danger of injury

- \rightarrow Keep out of the danger zone of the device.
- → When working on the device, switch off the mains

ebmpapst

supply voltage and secure the latter from being switched on again.

→ Wait until the device stops.

1.5 Safety and protective functions

DANGER

Missing safety device and non-functioning safety device If there is no safety device, you could be seriously injured, for example by reaching into the running device with your hands.

- → Operate the device only with a fixed and isolating safety protection and a fixed guard grille. The guard must withstand the kinetic energy of a fan blade detaching at maximum speed.
- → The device is a built-in component. You, the owner/ operator, are responsible for providing adequate protection for the device.
- → Instantly stop the device once you detect a missing or ineffective protective feature.

1.6 Electromagnetic radiation

Interference from electromagnetic radiation is possible, e.g. in conjunction with open and closed-loop control devices.

If unacceptable emission intensities occur when the fan is installed, appropriate shielding measures have to be taken by the user.

NOTE

Electrical or electromagnetic interferences after integrating the device in installations on the customer's side.

 \rightarrow Verify that the entire setup is EMC compliant.

1.7 Mechanical movement

DANGER

Rotating device

Body parts coming into contact with the rotor and impeller can be injured.

- → Secure the device against accidental contact.
- → Before working on the system/machine, wait until all parts have come to a standstill.

WARNING

Rotating device

Long hair, loose items of clothing and jewellery could become entangled and pulled into the device. You could be injured.

- → Do not wear any loose clothing or jewellery while working on rotating parts.
- → Protect long hair by wearing a cap.

WARNING

Flying parts

If safety devices are missing, this may cause fan blades to be ejected at high speeds, causing bodily harm.

→ Take appropriate safety measures. The safety devices must prevent contact with rotating and electrically live parts.

1.8 Emission

WARNING

Depending on the installation and operating conditions, a sound pressure level greater than 70 dB(A) may arise.

Danger of noise-induced hearing loss

- → Take appropriate technical safety measures.
- → Protect operating personnel with appropriate safety equipment, e.g. hearing protection.
- ightarrow Also observe the requirements of local agencies.

1.9 Hot surface

CAUTION

High temperature at the electronics enclosure

Danger of burn injuries

→ Ensure that sufficient protection against accidental contact is provided.

1.10 Transport

NOTE

Transport of device

- → Transport the device in its original packaging only.
- → Secure the device so that it does not slip, e.g. by using a clamping strap.

1.11 Storage

Store the device in a dry and weatherproof manner in the original packing in a clean environment.

Protect the device from environmental impacts and dirt until the final installation

We recommend storing the device for a maximum up to one year to guarantee proper operation and longest possible service life. Even devices explicitly suited for outdoor use are to be stored as described prior to being commissioned. Maintain the storage temperature, see

chapter 3.5 Transport and storage conditions.

1.12 Disposal

When disposing of the device, please comply with all relevant requirements and regulations applicable in your country.

W2G130-AA33-01

Operating instructions

2. PROPER USE

The device is exclusively designed as a built-in device for moving air according to its technical data.

Any other or secondary use is deemed improper and constitutes a misuse of the device.

Installations on the customer's side must meet the mechanical, thermal and service life-related stresses that can occur.

Proper use also includes:

- Moving air with a density of 1.2 kg/m³.
- Using the device in accordance with the permitted ambient temperature, see chapter 3.5 Transport and storage conditions and chapter 3.2 Nominal data.
- Operating the device with all protective features in place.
- Minding the operating instructions.

Improper use

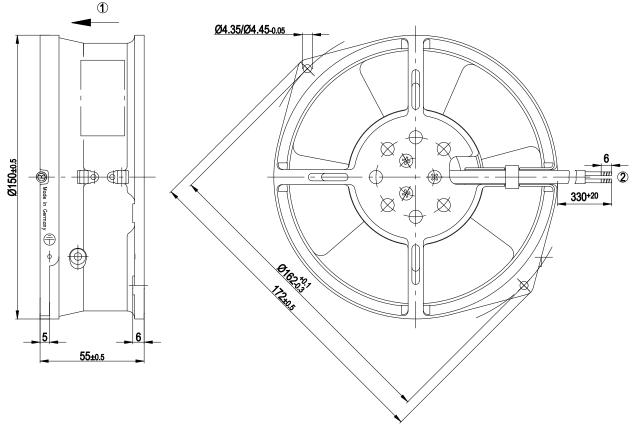

Using the device in the following ways is particularly prohibited and may cause hazards:

- · Moving air that contains abrasive particles.
- Moving highly corrosive air, e.g. salt spray mist. Exceptions are devices that are intended for salt spray mist and protected accordingly.
- · Moving air that contains dust pollution, e.g. suctioning off saw dust.
- Operating the device close to flammable materials or components.
- · Operating the device in an explosive atmosphere.
- Using the device as a safety component or for taking on safetyrelated functions.
- In addition, all application options that are not listed under proper use.

3.5 Transport and storage conditions

 \Rightarrow Use the device in accordance with its protection type.

Max. permissible ambient motor temp. (transp./ storage)	+ 80 °C
Min. permissible	- 40 °C
ambient motor temp. (transp./storage)	

4. CONNECTION AND START-UP

4.1 Connecting the mechanical system

CAUTION

Cutting and crushing hazard when removing the fan from the packaging

- → Carefully lift the fan out of its packaging, only touching the housing. Make sure to avoid any shock.
- → Wear safety shoes and cut-resistant safety gloves.
- ⇒ Check the device for transport damage. Damaged devices must no longer be installed.
- \Rightarrow Install the undamaged device according to your application.

4.2 Connecting the electrical system

CAUTION

Electrical voltage

The fan is a built-in component and features no electrically isolating switch.

- → Only connect the fan to circuits that can be switched off with an all-pole separating switch.
- → When working on the fan, you must switch off the installation/machine in which the fan is installed and secure it from being switched on again.

NOTE

Water penetration into leads or wires

Water enters at the cable end on the customers side and can damage the device.

→ Make sure that the cable end is connected in a dry environment

Operate the device with a safely isolated power pack.

4.2.1 Prerequisites

- ⇒ Check whether the data on the type plate agree with the connection
- ⇒ Before connecting the device, ensure that the supply voltage matches the operating voltage of the device.
- ⇒ Only use cables designed for current according to the type plate.

4.3 Connection of the cables

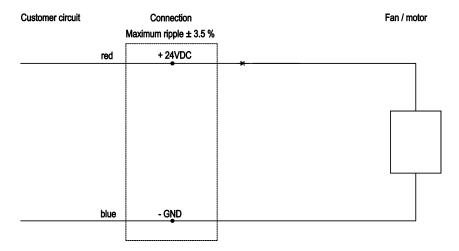

External leads are brought out of device.

⇒ Connect the lines according to your application. When doing so, observe chapter 4.4 Connection diagram.

Translation of the original operating instructi

4.4 Connection diagram

Direction of rotation is reversed by swapping two line phases.

4.5 Checking the connections

- ⇒ Make sure that the power is off (all phases).
- ⇒ Secure it from being switched on again.
- ⇒ Check the correct fit of the connection lines.

4.6 Switch on device

WARNING Hot motor housing

Fire hazard

- → Ensure that no combustible or flammable materials are located close to the fan.
- ⇒ Inspect the device for visible external damage and the proper function of the protective features before switching it on.
- ⇒ Check the air flow paths of the fan for foreign objects and remove any that are found.
- ⇒ Apply the nominal voltage to the voltage supply.
- ⇒ Start the device by changing the input signal.

4.7 Switching off the device

⇒ Disconnect the device from the supply voltage.

5. MAINTENANCE, MALFUNCTIONS, POSSIBLE CAUSES AND REMEDIES

Motor and electronics enclosure are sealed by ebm-papst. Changes or repairs may be carried out by ebm-papst only.

Do not perform any repairs on your device. Return the device to ebmpapst for repair or replacement.

WARNING

Terminals and connections have voltage even with a unit that is shut off

Electric shock

→ Wait for five minutes after disconnecting the voltage at all poles before touching the unit.

CAUTION

If control voltage is applied or a speed setpoint is stored, the motor automatically restarts, e.g. after a power failure. Danger of injury

- → Keep out of the danger zone of the device.
- → When working on the device, switch off the mains supply voltage and secure the latter from being switched on again.
- \rightarrow Wait until the device stops.

If the device remains out of use for some time, e.g. when in storage, we recommend switching the device on for at least 2 hours to allow any condensate to evaporate and to move the bearings.

Malfunction/error	Possible cause	Possible remedy
Motor does not turn	Mechanical blockage	Switch off, de-
		energise, and
		remove mechanical
		blockage
	Mains supply	Check mains supply
	voltage faulty	voltage, restore
		power supply
		apply control signal
	Faulty connection	Correct connection,
		see connection diagram
Impeller running	Imbalance in rotating	Clean the device; if
roughly	parts	imbalance is still
		evident after
		cleaning, replace
		device.
		If you have
		attached any weight
		clips during cleaning,
		make sure to
		remove them
		afterwards.
Overtemperature of	Insufficient cooling	Improve cooling if
electronics/motor		possible.
		Reset by switching
		off the mains supply
		voltage for at least
		20 s after motor
		standstill
	Ambient temperature	Lower ambient
	too high	temperature if
		possible.
