

## CM1402

### Features

- Functionally and pin compatible with CMD's CSPEMI400
- *OptiGuard* coated for improved reliability at assembly
- Three channels of EMI filtering, each with ESD protection
- Two additional channels of ESD-only protection
- $\pm 10\text{kV}$  ESD protection (IEC 61000-4-2, contact discharge) on all pins
- $\pm 25\text{kV}$  ESD protection (HBM)
- Greater than 30dB of attenuation at 1GHz
- 10-bump, 1.960mm x 1.330mm footprint Chip Scale Package (CSP)
- Chip Scale Package features extremely low lead inductance for optimum filter and ESD performance
- RoHS-compliant, lead-free packaging

### Applications

- SIM Card slot in mobile handsets
- I/O port protection for mobile handsets, notebook computers, PDAs, etc.
- EMI filtering for data ports in cell phones, PDAs or notebook computers

### Product Description

The CM1402 is an EMI filter array with ESD protection, which integrates three pi filters (C-R-C) and two additional channels of ESD protection. The CM1402 has component values of 20pF-47 $\Omega$ -20pF, and 20pF-100 $\Omega$ -20pF. The parts include avalanche-type ESD diodes on every pin, which provide a very high level of protection for sensitive electronic components that may be subjected to electrostatic discharge (ESD). The ESD diodes connected to the filter ports are designed and characterized to safely dissipate ESD strikes of  $\pm 10\text{kV}$ , beyond the maximum requirement of the IEC 61000-4-2 international standard. Using the MIL-STD-883 (Method 3015) specification for Human Body Model (HBM) ESD, the pins are protected for contact discharges at greater than  $\pm 25\text{kV}$ .

The ESD diodes on pins A4 and C4 ports are designed and characterized to safely dissipate ESD strikes of  $\pm 10\text{kV}$ , well beyond the maximum requirement of the IEC 61000-4-2 international standard.

This device is particularly well suited for portable electronics (e.g. mobile handsets, PDAs, notebook computers) because of its small package format and easy-to-use pin assignments. In particular, the CM1402 is ideal for EMI filtering and protecting data lines from ESD for the SIM card slot in mobile handsets.

The CM1402 incorporates *OptiGuard* coating which results in improved reliability at assembly. The CM1402 is available in a space-saving, low-profile Chip Scale Package.

Note 2: ESD applied to input and output pins with respect to GND, one at a time.

Note 3: Clamping voltage is measured at the opposite side of the EMI filter to the ESD pin. For example, if ESD is applied to Pin A1, then clamping voltage is measured at Pin C1.

Note 4: Unused pins are left open.

## Application Information

The CM1402 provides a bidirectional filter and protector for all the signals and the power line on the SIM (subscriber identity module) card connector. SIM cards are found in all GSM cellular phones and in some other handheld devices or card readers. The ESD diodes protect the controller against possible ESD strikes that may occur when the connector pins are exposed during direct contact, or during insertion of the SIM card into the card slot. The EMI filter suppresses all high-frequency noise, preventing the unwanted EMI signals from both entering and exiting the main board. The signals that interface with the SIM card are the Reset, the Clock and the bidirectional data I/O, as shown in Typical Application Diagram for the SIM Card Interface.

Note: One channel of the CM1402 with a zener diode is not shown on the diagram.

**Figure 5. Typical Application Diagram for the SIM Card Interface**

For best filter and ESD performance, both GND bumps (B1, B2) of the CM1402 should be directly connected to the Ground plane. A small capacitor of about 1 $\mu$ F is required next to the V<sub>cc</sub> pin of the SIM connector in order to improve stability of the SIM card supply rail.
