

### High-performance Clock Generator Series

# Compact 1ch Clock Generators for Digital Cameras

## BU3071HFV, BU3072HFV, BU3073HFV, BU3076HFV BU7322HFV, BU7325HFV

#### ●Description

These Clock Generators incorporates compact package compared to oscillators, which provides the generation of high-frequency CCD, USB, VIDEO clocks necessary for digital still cameras and digital video cameras.

#### ●Features

- 1) SEL pin allowing for the selection of frequencies
- 2) Selection of OE pin enabling Power-down function
- 3) Crystal-oscillator-level clock precision with high C/N characteristics and low jitter
- 4) Microminiature HVSO6 Package incorporated
- 5) Single power supply of 3.3 V

#### ●Applications

Digital Still Camera, Digital Video Camera, and others

#### ●Lineup

	BU3071HFV	BU3072HFV	BU3073HFV	BU3076HFV	BU7322HFV	BU7325HFV
Supply voltage	3.0 V~3.6V	3.0 V~3.6V	3.0 V~3.6V	2.85 V~3.6V	2.85 V~3.6V	2.85 V~3.6V
Operating temperature range	-5°C~70°C	-5°C~70°C	-5°C~70°C	-5°C~75°C	-5°C~75°C	-30°C~85°C
Reference input clock	28.6363MHz	48.0000MHz	48.0000MHz	27.0000MHz	27.0000MHz	27.0000MHz
Output clock	54.0000MHz	27.0000MHz	24.3750MHz	54.0000MHz	49.5000MHz	48.0000MHz
	-	36.0000MHz	24.5454MHz	67.5000MHz	36.0000MHz	78.0000MHz
Power-down function	Provided	Provided	Provided	Provided	Provided	Provided
Operating current (TYP)	10mA	11mA	11mA	12mA	10mA	12mA
Package	HVSO6	HVSO6	HVSO6	HVSO6	HVSO6	HVSO6

#### ●Absolute Maximum Ratings (Ta=25°C)

	Symbol	Limit	Unit
Supply voltage	VDD	-0.3~4.0	V
Input voltage	VIN	-0.3~VDD+0.3	V
Storage temperature range	Tstg	-30~125	°C
Power dissipation	Pd	410	mW

\*1 Operating is not guaranteed.

\*2 In the case of exceeding Ta = 25°C, 4.1mW should be reduced per 1°C.

\*3 The radiation-resistance design is not carried out.

\*4 Power dissipation is measured when the IC is mounted to the printed circuit board.

●Recommended Operating Range

Parameter	Symbol	Limit	Unit
Supply voltage	VDD	3.0~3.6	V
Input H voltage	VINH	0.8VDD~VDD	V
Input L voltage	VINL	0.0~0.2VDD	V
Operating temperature	Topr	-5~70	°C
Output load	CL	15(MAX)	pF

●Electrical characteristics

BU3071HFV (Ta=25°C, VDD=3.3V, Crystal frequency=28.6363MHz, unless otherwise specified.)

Parameter	Symbol	Min.	Typ.	Max.	Unit	Conditions
Output H voltage	VOH	2.8	-	-	V	IOH=-4.0mA
Output L voltage	VOL	-	-	0.5	V	IOL=4.0mA
Consumption current 1	IDD1	-	10	15	mA	OE=H, at no load
Consumption current 2	IDD2	-	1	1.3	mA	OE=L
Output frequency		-	54.0000	-	MHz	IN*264/35/4
The following parameters represent design guaranteed performance.						
Duty	Duty	45	50	55	%	Measured at a voltage of 1/2 of VDD
Period-Jitter 1 $\sigma$	PJsSD	-	50	-	psec	※1
Period-Jitter MIN-MAX	PJsABS	-	300	-	psec	※2
Rise time	tr	-	2.5	-	nsec	Period of transition time required for the output to reach 80% from 20% of VDD. Provided with 15pF output load.
Fall time	tf	-	2.5	-	nsec	Period of transition time required for the output to reach 20% from 80% of VDD. Provided with 15pF output load.
Output Lock time	tLOCK	-	-	1	msec	※3

Note) The output frequency is determined by the arithmetic (frequency division) expression of a frequency input to IN. If the input frequency is set to 28.6363MHz, the output frequency will be as listed above.

BU3072HFV (Ta=25°C, VDD=3.3V, Crystal frequency=48.0000MHz, unless otherwise specified.)

Parameter	Symbol	Min.	Typ.	Max.	Unit	Conditions
Output H voltage	VOH	2.8	-	-	V	IOH=-4.0mA
Output L voltage	VOL	-	-	0.5	V	IOL=4.0mA
Consumption current 1	IDD1	-	11	16	mA	PD=H, at no load
Consumption current 2	IDD2	-	-	5	$\mu$ A	PD=L
Output frequency	CLK_27	-	27.0000	-	MHz	SEL=L, IN*18/8/4
	CLK_36	-	36.0000	-	MHz	SEL=H, IN*24/8/4
The following parameters represent design guaranteed performance.						
Duty	Duty	45	50	55	%	Measured at a voltage of 1/2 of VDD
Period-Jitter 1 $\sigma$	PJsSD	-	35	-	psec	※1
Long-Term-Jitter MIN-MAX	LTJsABS	-	0.9	1.5	nsec	MIN-MAX of long-term jitter (100 $\mu$ sec from trigger)
Rise time	tr	-	2.5	-	nsec	Period of transition time required for the output to reach 80% from 20% of VDD. Provided with 15pF output load.
Fall time	tf	-	2.5	-	nsec	Period of transition time required for the output to reach 20% from 80% of VDD. Provided with 15pF output load.
Output Lock time	tLOCK	-	-	1	msec	※3

Note) The output frequency is determined by the arithmetic (frequency division) expression of a frequency input to IN. If the input frequency is set to 48.0000MHz, the output frequency will be as listed above.

BU3073HFV (Ta=25°C, VDD=3.3V, Crystal frequency=48.0000MHz, unless otherwise specified.)

Parameter	Symbol	Min.	Typ.	Max.	Unit	Conditions
Output H voltage	VOH	2.8	-	-	V	IOH=-4.0mA
Output L voltage	VOL	-	-	0.5	V	IOL=4.0mA
Consumption current 1	IDD1	-	11	16	mA	PD=H, at no load
Consumption current 2	IDD2	-	-	5	mA	PD=L
Output frequency	CLK_375	-	24.3750	-	MHz	SEL=L, IN*65/16/8
	CLK_545	-	24.5454	-	MHz	SEL=H, IN*45/11/8
The following parameters represent design guaranteed performance.						
Duty	Duty	45	50	55	%	Measured at a voltage of 1/2 of VDD
Period-Jitter 1 $\sigma$	PJsSD	-	45	-	psec	※1
Long-Term-Jitter MIN-MAX	LTJsABS	-	0.9	1.5	nsec	MIN-MAX of long-term jitter (100 $\mu$ sec from trigger)
Rise time	tr	-	2.5	-	nsec	Period of transition time required for the output to reach 80% from 20% of VDD. Provided with 15pF output load.
Fall time	tf	-	2.5	-	nsec	Period of transition time required for the output to reach 20% from 80% of VDD. Provided with 15pF output load.
Output Lock time	tLOCK	-	-	1	msec	※3

Note) The output frequency is determined by the arithmetic (frequency division) expression of a frequency input to IN.

If the input frequency is set to 48.0000MHz, the output frequency will be as listed above.

BU3076HFV (Ta=25°C, VDD=3.3V, Crystal frequency=27.0000MHz, unless otherwise specified.)

Parameter	Symbol	Min.	Typ.	Max.	Unit	Conditions
Output H voltage	VOH	2.8	-	-	V	IOH=-4.0mA
Output L voltage	VOL	-	-	0.5	V	IOL=4.0mA
Pull-down resistance	Rpd	25	50	100	K $\Omega$	Pull-down resistance on input pin
Consumption current 1	IDD1	-	10	15	mA	54MHz output, at no load
Consumption current 2	IDD2	-	12	18	mA	67.5MHz output, at no load
Standby current	IDDst	-	-	1	$\mu$ A	OE=L
Output frequency	CLK_54	-	54.0000	-	MHz	SEL=L, IN*48/6/4
	CLK_67.5	-	67.5000	-	MHz	SEL=H, IN*60/6/4
The following parameters represent design guaranteed performance.						
Duty	Duty	45	50	55	%	Measured at a voltage of 1/2 of VDD
Period-Jitter 1 $\sigma$	PJsSD	-	50	-	psec	※1
Period-Jitter MIN-MAX	PJsABS	-	300	-	psec	※2
Rise time	tr	-	1.5	-	nsec	Period of transition time required for the output to reach 80% from 20% of VDD. Provided with 15pF output load.
Fall time	tf	-	1.5	-	nsec	Period of transition time required for the output to reach 20% from 80% of VDD. Provided with 15pF output load.
Output Lock time	tLOCK	-	-	200	usec	※3

Note) The output frequency is determined by the arithmetic (frequency division) expression of a frequency input to IN.

If the input frequency is set to 27.0000MHz, the output frequency will be as listed above.

BU7322HFV (Ta=25°C, VDD=3.3V, Crystal frequency=27.0000MHz, unless otherwise specified.)

Parameter	Symbol	Min.	Typ.	Max.	Unit	Conditions
Output H voltage	VOH	2.8	-	-	V	IOH=-4.0mA
Output L voltage	VOL	-	-	0.5	V	IOL=4.0mA
Pull-down resistance	Rpd	25	50	100	kΩ	Pull-down resistance on input pin
Consumption current 1	IDD	-	10	13.5	mA	49.5MHz output, at no load
Consumption current 2	IDD2	-	9.5	13.0	mA	36.0MHz output, at no load
Standby current	IDDst	-	-	1	μA	OE=L
Output frequency	CLK_49.5	-	49.5000	-	MHz	SEL=L, IN*66/6/6
	CLK_36	-	36.0000	-	MHz	SEL=H, IN*64/6/8

The following parameters represent design guaranteed performance.

Duty	Duty	45	50	55	%	Measured at a voltage of 1/2 of VDD
Period-Jitter 1 $\sigma$	PJsSD	-	50	-	psec	※1
Period-Jitter MIN-MAX	PJsABS	-	300	-	psec	※2
Rise time	tr	-	2.5	-	nsec	Period of transition time required for the output to reach 80% from 20% of VDD. Provided with 15pF output load.
Fall time	tf	-	2.5	-	nsec	Period of transition time required for the output to reach 20% from 80% of VDD. Provided with 15pF output load.
Output Lock time	tLOCK	-	-	200	usec	※3

Note) The output frequency is determined by the arithmetic (frequency division) expression of a frequency input to IN.

If the input frequency is set to 27.0000MHz, the output frequency will be as listed above.

BU7325HFV (Ta=25°C, VDD=3.3V, Crystal frequency=27.0000MHz, unless otherwise specified.)

Parameter	Symbol	Min.	Typ.	Max.	Unit	Conditions
Output H voltage	VOH	2.8	-	-	V	IOH=-4.0mA
Output L voltage	VOL	-	-	0.5	V	IOL=4.0mA
Pull-down resistance	Rpd	25	50	100	kΩ	Pull-down resistance on input pin
Consumption current 1	IDD1	-	11	15	mA	OE=H, SEL=L, at no load
Consumption current 2	IDD2	-	12	16.5	mA	OE=H, SEL=H, at no load
Standby current	IDDst	-	-	1	μA	OE=L
Output frequency	CLK_48	-	48.0000	-	MHz	SEL=L, IN*96/9/6
	CLK_78	-	78.0000	-	MHz	SEL=H, IN*104/9/4

The following parameters represent design guaranteed performance.

Duty	Duty	45	50	55	%	Measured at a voltage of 1/2 of VDD
Period-Jitter 1 $\sigma$	PJsSD	-	50	-	psec	※1
Period-Jitter MIN-MAX	PJsABS	-	300	-	psec	※2
Rise time	tr	-	1.5	-	nsec	Period of transition time required for the output to reach 80% from 20% of VDD. Provided with 15pF output load.
Fall time	tf	-	1.5	-	nsec	Period of transition time required for the output to reach 20% from 80% of VDD. Provided with 15pF output load.
Output Lock time	tLOCK	-	-	200	usec	※3

Note) The output frequency is determined by the arithmetic (frequency division) expression of a frequency input to IN.

If the input frequency is set to 27.0000MHz, the output frequency will be as listed above.

Common to BU3071HFV, BU3072HFV, BU3073HFV, BU3076HFV, BU7322HFV, BU7325HFV

\*1 Period-Jitter 1  $\sigma$

This parameter represents standard deviation ( $=1\sigma$ ) on cycle distribution data at the time when the output clock cycles are sampled 1000 times consecutively with the TDS7104 Digital Phosphor Oscilloscope of Tektronix Japan, Ltd.

\*2 Period-Jitter MIN-MAX

This parameter represents a maximum distribution width on cycle distribution data at the time when the output clock cycles are sampled 1000 times consecutively with the TDS7104 Digital Phosphor Oscilloscope of Tektronix Japan, Ltd.

\*3 Output Lock Time

This parameter represents elapsed time after power supply turns ON to reach a voltage of 3.0 V, after the system is switched from Power-Down state to normal operation state, or after the output frequency is switched, until it is stabilized at a specified frequency, respectively.

- \* For VDD and VSS, insert a bypass capacitor of approx. 0.1  $\mu$ F as close as possible to the pin.
- \* Bypass capacitors with good high-frequency characteristics are recommended.
- \* Even though we believe that the typical application circuit is worth of a recommendation, please be sure to thoroughly recheck the characteristics before use.

## ●Cautions on use

### (1) Absolute Maximum Ratings

An excess in the absolute maximum ratings, such as applied voltage (VDD or VIN), operating temperature range (Topr), etc., can break down devices, thus making impossible to identify breaking mode such as a short circuit or an open circuit. If any special mode exceeding the absolute maximum ratings is assumed, consideration should be given to take physical safety measures including the use of fuses, etc.

### (2) Recommended operating conditions

These conditions represent a range within which characteristics can be provided approximately as expected. The electrical characteristics are guaranteed under the conditions of each parameter.

### (3) Reverse connection of power supply connector

The reverse connection of power supply connector can break down ICs. Take protective measures against the breakdown due to the reverse connection, such as mounting an external diode between the power supply and the IC's power supply terminal.

### (4) Power supply line

Design PCB pattern to provide low impedance for the wiring between the power supply and the GND lines.

In this regard, for the digital block power supply and the analog block power supply, even though these power supplies has the same level of potential, separate the power supply pattern for the digital block from that for the analog block, thus suppressing the diffraction of digital noises to the analog block power supply resulting from impedance common to the wiring patterns. For the GND line, give consideration to design the patterns in a similar manner.

Furthermore, for all power supply terminals to ICs, mount a capacitor between the power supply and the GND terminal. At the same time, in order to use an electrolytic capacitor, thoroughly check to be sure the characteristics of the capacitor to be used present no problem including the occurrence of capacity dropout at a low temperature, thus determining the constant.

### (5) GND voltage

Make setting of the potential of the GND terminal so that it will be maintained at the minimum in any operating state. Furthermore, check to be sure no terminals are at a potential lower than the GND voltage including an actual electric transient.

### (6) Short circuit between terminals and erroneous mounting

In order to mount ICs on a set PCB, pay thorough attention to the direction and offset of the ICs. Erroneous mounting can break down the ICs. Furthermore, if a short circuit occurs due to foreign matters entering between terminals or between the terminal and the power supply or the GND terminal, the ICs can break down.

### (7) Operation in strong electromagnetic field

Be noted that using ICs in the strong electromagnetic field can malfunction them.

### (8) Inspection with set PCB

On the inspection with the set PCB, if a capacitor is connected to a low-impedance IC terminal, the IC can suffer stress. Therefore, be sure to discharge from the set PCB by each process. Furthermore, in order to mount or dismount the set PCB to/from the jig for the inspection process, be sure to turn OFF the power supply and then mount the set PCB to the jig. After the completion of the inspection, be sure to turn OFF the power supply and then dismount it from the jig. In addition, for protection against static electricity, establish a ground for the assembly process and pay thorough attention to the transportation and the storage of the set PCB.

### (9) Input terminals

In terms of the construction of IC, parasitic elements are inevitably formed in relation to potential. The operation of the parasitic element can cause interference with circuit operation, thus resulting in a malfunction and then breakdown of the input terminal. Therefore, pay thorough attention not to handle the input terminals, such as to apply to the input terminals a voltage lower than the GND respectively, so that any parasitic element will operate. Furthermore, do not apply a voltage to the input terminals when no power supply voltage is applied to the IC. In addition, even if the power supply voltage is applied, apply to the input terminals a voltage lower than the power supply voltage or within the guaranteed value of electrical characteristics.

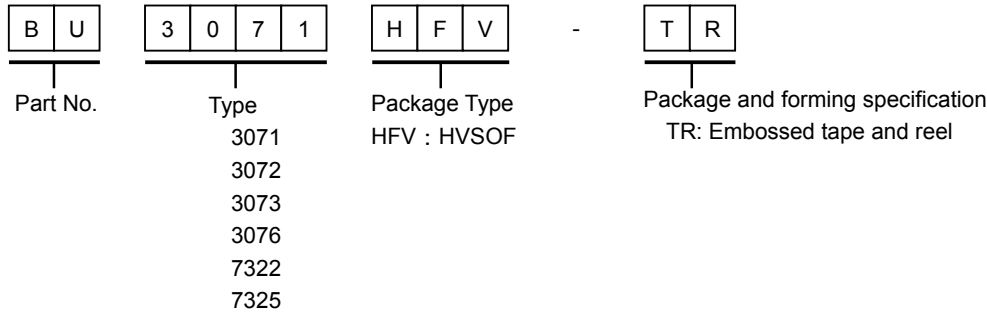

### (10) Ground wiring pattern

If small-signal GND and large-current GND are provided, It will be recommended to separate the large-current GND pattern from the small-signal GND pattern and establish a single ground at the reference point of the set PCB so that resistance to the wiring pattern and voltage fluctuations due to a large current will cause no fluctuations in voltages of the small-signal GND. Pay attention not to cause fluctuations in the GND wiring pattern of external parts as well.

### (11) External capacitor

In order to use a ceramic capacitor as the external capacitor, determine the constant with consideration given to a degradation in the nominal capacitance due to DC bias and changes in the capacitance due to temperature, etc.

● Product Designation

**HVSO6**

- The contents described herein are correct as of June, 2007
- The contents described herein are subject to change without notice. For updates of the latest information, please contact and confirm with ROHM CO.,LTD.
- Any part of this application note must not be duplicated or copied without our permission.
- Application circuit diagrams and circuit constants contained herein are shown as examples of standard use and operation. Please pay careful attention to the peripheral conditions when designing circuits and deciding upon circuit constants in the set.
- Any data, including, but not limited to application circuit diagrams and information, described herein are intended only as illustrations of such devices and not as the specifications for such devices. ROHM CO.,LTD. disclaims any warranty that any use of such devices shall be free from infringement of any third party's intellectual property rights or other proprietary rights, and further, assumes no liability of whatsoever nature in the event of any such infringement, or arising from or connected with or related to the use of such devices.
- Upon the sale of any such devices, other than for buyer's right to use such devices itself, resale or otherwise dispose of the same, implied right or license to practice or commercially exploit any intellectual property rights or other proprietary rights owned or controlled by ROHM CO., LTD. is granted to any such buyer.
- The products described herein utilize silicon as the main material.
- The products described herein are not designed to be X ray proof.

The products listed in this catalog are designed to be used with ordinary electronic equipment or devices (such as audio visual equipment, office-automation equipment,communications devices,electrical appliances and electronic toys). Should you intend to use these products with equipment or devices which require an extremely high level of reliability and the malfunction of which would directly endanger human life (such as medical instruments,transportation equipment,aerospace machinery,nuclear-reactor controllers,fuel controllers and other safety devices),please be sure to consult with our sales representative in advance.

### Notes

- No technical content pages of this document may be reproduced in any form or transmitted by any means without prior permission of ROHM CO.,LTD.
- The contents described herein are subject to change without notice. The specifications for the product described in this document are for reference only. Upon actual use, therefore, please request that specifications to be separately delivered.
- Application circuit diagrams and circuit constants contained herein are shown as examples of standard use and operation. Please pay careful attention to the peripheral conditions when designing circuits and deciding upon circuit constants in the set.
- Any data, including, but not limited to application circuit diagrams information, described herein are intended only as illustrations of such devices and not as the specifications for such devices. ROHM CO.,LTD. disclaims any warranty that any use of such devices shall be free from infringement of any third party's intellectual property rights or other proprietary rights, and further, assumes no liability of whatsoever nature in the event of any such infringement, or arising from or connected with or related to the use of such devices.
- Upon the sale of any such devices, other than for buyer's right to use such devices itself, resell or otherwise dispose of the same, no express or implied right or license to practice or commercially exploit any intellectual property rights or other proprietary rights owned or controlled by
- ROHM CO., LTD. is granted to any such buyer.
- Products listed in this document are no antiradiation design.

The products listed in this document are designed to be used with ordinary electronic equipment or devices (such as audio visual equipment, office-automation equipment, communications devices, electrical appliances and electronic toys).

Should you intend to use these products with equipment or devices which require an extremely high level of reliability and the malfunction of which would directly endanger human life (such as medical instruments, transportation equipment, aerospace machinery, nuclear-reactor controllers, fuel controllers and other safety devices), please be sure to consult with our sales representative in advance.

It is our top priority to supply products with the utmost quality and reliability. However, there is always a chance of failure due to unexpected factors. Therefore, please take into account the derating characteristics and allow for sufficient safety features, such as extra margin, anti-flammability, and fail-safe measures when designing in order to prevent possible accidents that may result in bodily harm or fire caused by component failure. ROHM cannot be held responsible for any damages arising from the use of the products under conditions out of the range of the specifications or due to non-compliance with the NOTES specified in this catalog.

Thank you for your accessing to ROHM product informations.

More detail product informations and catalogs are available, please contact your nearest sales office.
