

MOTIONBEE™ family acceleration sensor

Features

- Ready-to-use IEEE 802.15.4 compliant wireless acceleration sensor
- Integrated three axis MEMS-based linear accelerometer
- Antenna on board
- No external components required excluding power supplier
- Possibility to be programmed via SIF connector with EMZNET ZigBee® protocol stack and custom applications
- Board fixing with screws or pads for SMD soldering
- Reset and commissioning push buttons externally available
- Power connector and power switch externally available
- Two LEDs externally available for connection check and debugging
- Board dimensions: 49 x 27 x 5 mm
- CE / FCC compliant

Description

SPMB250-A1 board is a ready-to-use wireless acceleration sensor based on an IEEE 802.15.4 compliant radio. It is designed to enable development of applications for remote motion monitoring in wireless sensor networks systems.

The board is based on the ZigBee® module SPZB250 which performs both the RF radio and controlling functions and the three axis linear accelerometer sensor LIS3LV02DL.

The ZigBee® module contains the SN250 SoC integrating a fully compliant 802.15.4 radio together with a microcontroller that can be used to elaborate sensor data and networking functionalities. SN250 can be programmed to run the EMZNET ZigBee® protocol stack from Ember Corporation. The module is programmable thanks to the SIF connector available on the SPZB250 module.

The LIS3LV02DL three axis accelerometer is a low power low voltage linear accelerometer with digital output that can operate in the user selectable range $\pm 2 g$ or $\pm 6 g$ and with programmable data rate.

The controller inside SPZB250 module handles all the networking functions and it can be used to implement custom procedures to elaborate and send data collected by the acceleration sensor.

The board is ready-to-use, requiring only an external power supplier to connect to the integrated standard two pole connector. A switch is present in series to the supply connection to power on / off the board.

1 RoHS compliance

ST modules are RoHS compliant and being based on ST devices comply with ECOPACK® norms implemented by ST.

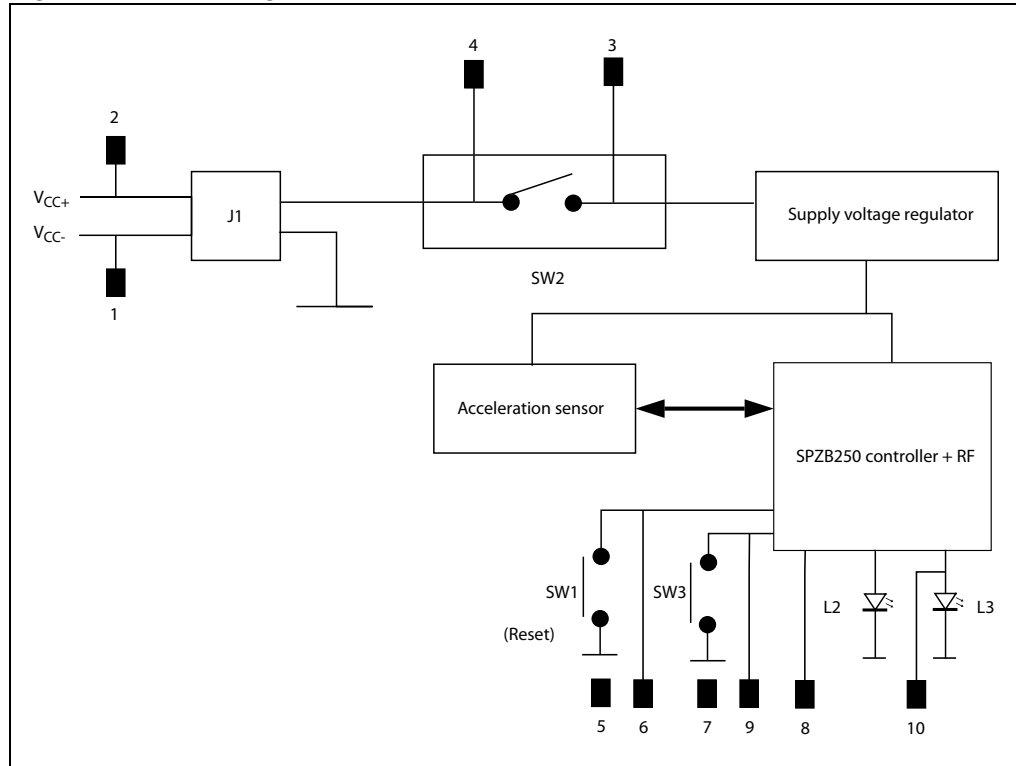

2 Connections - pad out

Figure 1. Connections

3 Block diagram

Figure 2. Block diagram

4 Maximum ratings

4.1 Absolute maximum ratings

Table 1. Absolute maximum ratings

Symbol	Parameter	Values		Unit
		Min	Max	
V _{CC}	Board supply voltage		7	V
T _{OPmax}	Operating ambient temperature	-40	+85	°C
T _{STG}	Storage temperature	-40	+85	°C

4.2 Operating ranges

Operating ranges define the limits for functional operation and parametric characteristics of the module.

Functionality outside these limits is not implied

Table 2. Operating ranges

Symbol	Parameter	Conditions	Values			Unit
			Min	Typ	Max	
V _{CC}	Module supply voltage	-40 °C < T < 85 °C	3.6		6	V
T _{STG}	Operating ambient temperature		-40		+85	°C
I _{OP}	Operation current ⁽¹⁾	V _{in} = 4 V stand by		16		μA
		V _{in} = 4 V TX mode		37		mA
		V _{in} = 4 V RX mode		36		mA
		V _{in} = 4 V CPU only		9		mA

1. Values indicated in the table are referred to the single states (Standby TX,RX,...); the overall current depends on the working strategy used by the application

5 Electrical characteristics

5.1 DC I/O specification

Table 3. DC input / output specification

Symbol	Parameter	Conditions	Values			Unit
			Min	Typ	Max	
VIL	Low level input voltage SW1 (Reset) and SW3	V _{in} = 4 V			0.6	V
VOL	Low level output voltage P8 (L1) and P10 (L2)	V _{in} = 4 V			0.2	V
VOH	High level output voltage P8 (L1) and P10 (L2)	V _{in} = 4 V	2.7		3.3	V
IOLed		V _{in} = 4 V			4	mA
RFin	Input frequency range		2405		2480	MHz
RX sens	Receiver sensitivity	@PER 1 %		-92		dBm
RFout	Output frequency range		2405		2480	MHz
TXpout	Nominal output power	@ 2402 – 2480 MHz		0		dBm
FS	Acceleration sensor Measurement Range		±1.7	±2.0		<i>g</i>
			±5.3	±6.0		<i>g</i>
Dres	Acceleration sensor Resolution	Full-scale = ±2 <i>g</i> Output data rate = 40 Hz		1.0		mg
So	Acceleration sensor Sensitivity	Full-scale = ±2 <i>g</i> 12 bit representation	920	1024	1126	LSb/ <i>g</i>
		Full-scale = ±6 <i>g</i> 12 bit representation	306	340	374	LSB/ <i>g</i>

6 Board description

6.1 Power supply connector (J1)

When used directly connected to the system to be monitored in terms of vibration / acceleration the only connection needed is the one related to the power source.

To have a standard and in the same time miniaturized connection a two pole connector has been chosen (i.e. Molex 53261-0271 or equivalent)

Figure 3. J1 connector

6.2 ON / OFF switch (SW2)

To power on / off the board a switch has been provided aboard.

Figure 4. SW2 switch

6.3 SIF connector (J2)

To allow the user to program the board, a SIF connector is available.

Signals available on this connector are:

Figure 5. SIF - pin description

Vdd	1	2	SIF_MISO
GND	3	4	SIF_MOSI
GND	5	6	SIF_CLK
SIF_LOADB	7	8	RSTB
PTI_EN	9	10	PTI_DATA

Figure 6. SIF connector

6.4 Pad description

When used on a motherboard the boundary pads on the SPMB250-A1 can be used to get the connections with the remaining part of the circuit present on the motherboard itself.

The meaning of the pads is listed in the following table:

Table 4. Pad description

N.	Pin name	I/O	Description
P1	J1 – Vcc- (GND)	Power	GND input voltage supply
P2	J1 – Vcc +	Power	Positive input voltage supply
P3	SW2-O	Power	Power switch pole connected to the circuit
P4	SW2-I	Power	Power switch pole connected to Vin +
P5	GND	Power	
P6	SW1 (RESET / RSTB)	I	Reset push button. Reset occurs when this pad is tied to GND
P7	GND	Power	
P8	GPIO8	I/O	GPIO8 of SPZB250 module
P9	SW3	I	General purpose push button / commissioning push button. It can used also as I/O pin
P10	L3 – GPIO13	O	Led 3 general purpose (connected to SPZB250 GPIUO13) A resistor is needed to limit the current

6.5 LED indicators

Two LED L2 (Led2) and L3 (Led3) are connected to the GPIO of SPZB250 module to be used to monitor the module activity. Driving pin of L3 is also available as pad out (P10).

7 Board layout

Figure 7. Board layout

8 Soldering

Soldering phase has to be carefully carried out: in order to avoid undesired melting phenomenon, particular attention has to be paid on the set up of the peak temperature.

Here following some suggestions for the temperature profile based on IPC/JEDEC J-STD-020C, July 2004 recommendations.

Table 5. Soldering

Profile feature	PB free assembly
Average ramp up rate ($T_{S_{MAX}}$ to T_P)	3 °C / sec max
Preheat	
Temperature min (T_S min)	150 °C
Temperature max (T_S max)	200 °C
Time (t_S min to t_S max) (t_S)	60 – 100 sec
Time maintained above:	
Temperature T_L	217 °C
Time t_L	40 – 70 sec
Peak temperature (T_p)	240 + 0 °C
Time within 5 °C of actual peak temperature (t_p)	10 – 20 sec
Ramp down rate	6 °C / sec
Time from 25 °C to peak temperature	8 minutes max

Figure 8. Soldering

9 Recommendations

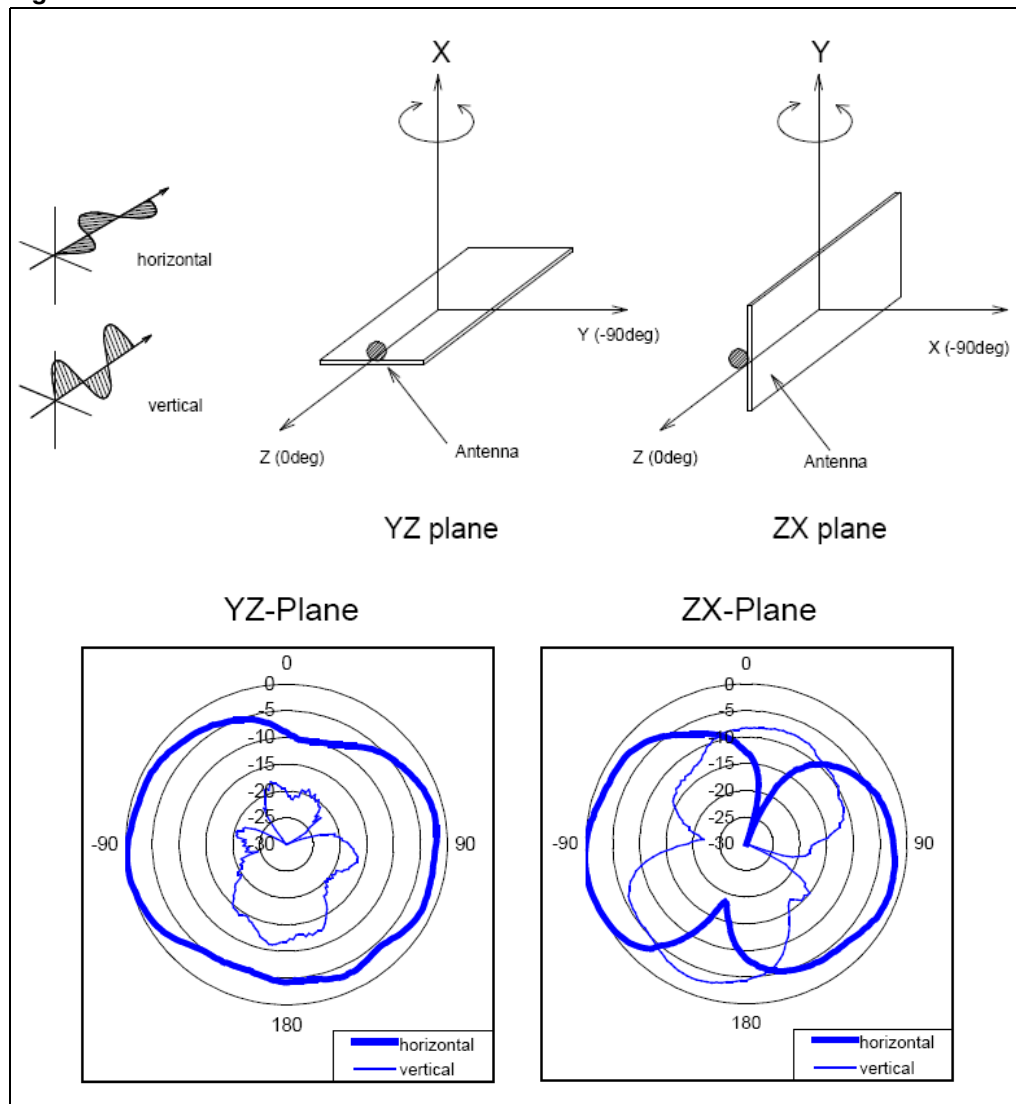

- An integrated antenna is present on the board:
 - Assembly the board in the application avoiding any shielding of the antenna
 - Avoid metallic parts close to the antenna
 - Do not use metallic case
- Board fixing can be done with 4 screws:
 - In case of fixing on metallic base insert an insulator foil between the board and the base in order to avoid any potential short circuit

10 Radiation pattern

SPMB250-A1 is based on the SPZB250 module which incorporates an RF section with an integrated antenna (Murata ANCV12G44SAA127).

The antenna radiation pattern (as measured on the SPZB250 module) follows.
