Bourns® Model PEC16 Update

In line with our commitment to bring increasing value to our customers, Bourns® Sensors and Controls Product Line is pleased to announce an update to our [Model PEC16](#) 16 mm Contacting Rotary Encoder.

The factory is changing the color of the plastic used to mold the base of the part from gray to green. The formulation of the base material will not change. This change will help us keep our costs in line and preclude price increases. The photos below show the change in color.

Old gray base

New green base

This color change does not affect form, fit or function of the product. The product remains RoHS compliant* with the color change. There are no changes to prices, minimums or multiples. Product with the color change will begin shipping with all current and new orders.

*RoHS Directive 2002/95/EC Jan 27, 2003 including Annex.
