

## 3-Terminal Fixed Negative Voltage Regulators

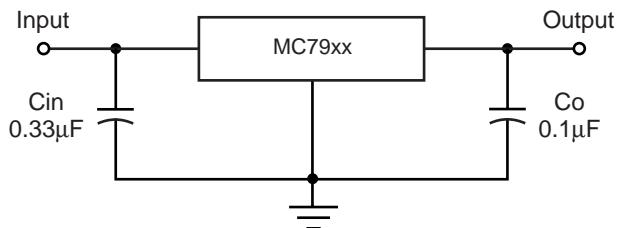

### Pin Arrangement

### Description

These voltage regulators are intended as complements to the popular MC78xx Series devices. These negative regulators are available in the same seven-voltage options as the MC78xx devices. In addition, one extra voltage option commonly employed in MECL systems is also available in the negative MC79xx Series.

Available in fixed output voltage options from -5.0 to -24 volts, these regulators employ current limiting, thermal shutdown, and safe-area compensation – making them remarkably rugged under most operating conditions. With adequate heatsinking they can deliver output currents in excess of 1.5 ampere.

### Standard Application

#### Notes:

A common ground is required between the input and the output voltages. The input voltage must remain typically 2.0V more negative even during the high point on the input ripple voltage.

xx = these two digits of the part number indicate output voltage.

Cin is required if regulator is located an appreciable distance from power supply filter.

Co improves stability and transient response.

### Features

- Output current in excess of 1.5 Ampere
- No external components required
- Internal thermal overload protection
- Internal short-circuit current limiting
- Output transistor safe-area compensation
- Output voltage offered in 2% tolerance

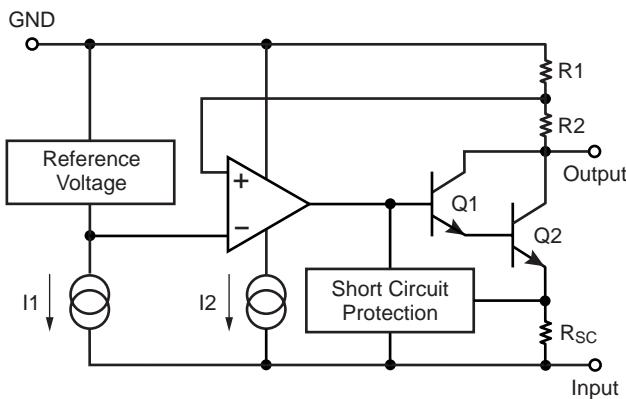

### Mechanical Data

**Case:** TO-220 Package

**Weight:** approx. 2.24g

Case outline is on the back page

### Internal Block Diagram

## Maximum Ratings

Ratings at 25°C ambient temperature unless otherwise specified.

| Parameter                            | Symbol           | Value       | Unit |
|--------------------------------------|------------------|-------------|------|
| Input Voltage <sup>(1)</sup>         | V <sub>in</sub>  | -30         | V    |
| Input Voltage <sup>(2)</sup>         | V <sub>in</sub>  | -40         | V    |
| Power Dissipation <sup>(3)</sup>     | P <sub>D</sub>   | 15          | W    |
| Operating Junction Temperature Range | T <sub>J</sub>   | -20 to +150 | °C   |
| Storage Junction Temperature Range   | T <sub>stg</sub> | -65 to +150 | °C   |

Notes: (1) MC7905 to MC7918

(2) MC7924

(3) Follow the derating curve. When T<sub>J</sub> exceeds 150°C, the internal circuit cuts off the output

## Electrical Characteristics – MC7905
