

LMS4684

0.5Ω Low-Voltage, Dual SPDT Analog Switch

General Description

The LMS4684 is a low on-resistance, low voltage dual SPDT (Single-Pole/Double-Throw) analog switch that operates from a 1.8V to 5.5V supply. The LMS4684 features a 0.5Ω R_{ON} for its NC switch and 0.8Ω R_{ON} for its NO switch at a 2.7V supply. The digital logic inputs are 1.8V logic-compatible with a 2.7V to 3.3V supply.

The LMS4684 is available in the 12 bump micro SMD and the 10 lead LLP miniature packages. These PCB real estate saving packages offer extreme performance while saving money with small footprints.

Features

- NC switch R_{ON} 0.5Ω max @ 2.7V
- NO switch R_{ON} 0.8Ω max @ 2.7V
- 50nA (max) supply current T_A = 25°C
- 1.8 to 5.5V single supply operation
- 12-Bump micro SMD package
- LLP-10 package, 3x4mm
- See AN-1112 for micro SMD package considerations
- See AN-1187 for LLP package considerations

Applications

- Power routing
- Battery-operated equipment
- Communications circuits
- Modems
- Cell phones

Electrical Characteristics (Continued)

Unless otherwise specified, $V^+ = 2.7$ to $3.3V$, $V_{IH} = 1.4V$, $V_{IL} = 0.5V$. Typical values are measured at $3V$, and $T_J = 25^\circ C$.

Boldface limits apply at temperature extremes.

Symbol	Parameter	Conditions	Min	Typ	Max	Units
Power Supply						
V^+	Power-Supply Range		1.8		5.5	V
I^+	Supply Current (Note 4)		-50	0.04	50	nA
			-200		200	

Note 1: Absolute Maximum Ratings indicate limits beyond which damage to the device may occur. Operating Ratings indicate conditions for which the device is intended to be functional, but specific performance is not guaranteed.

Note 2: Human body model: $1.5k\Omega$ in series with $100pF$. Machine model, 0Ω in series with $200pF$.

Note 3: The maximum power dissipation is a function of $T_{J(max)}$, θ_{JA} and T_A .

Note 4: Guaranteed by design.

Note 5: ΔR_{ON} is equal to the difference between NC1/NC2 R_{ON} or NO1/NO2 R_{ON} at a specified voltage.

Note 6: Flatness is defined as the difference between the maximum and minimum value of on-resistance as measured over the specified analog signal ranges.

Application Notes

PRODUCT DESCRIPTION

The LMS4684 is a low voltage dual analog switch with extremely low On-Resistance operating with a supply voltage range of 1.8V to 5.5V. National has fully characterized the LMS4684 to operate in applications with 3V nominal supply voltage. The LMS4684 also features fast switching times for Turn-Off (40ns max over temp) and Turn-On (65ns max over temp).

The switch operates asymmetrically, one terminal is normally closed (NC) and the other terminal normally open (NO).

Both NC and NO terminals are connected to a common terminal (COM). This configuration is ideal for applications with asymmetric loads such as speaker handsets and internal speakers.

ANALOG SIGNAL LEVELS

The Analog signal ranges from GND to V^+ and are passed through the switch with very little change. Each switch is bidirectional so any pin can be an input or output.

DIGITAL CONTROL INPUTS

The IN pin can be driven to 5.5V regardless of the voltage level of the supply pin V^+ . For example if you wanted to have a supply of 2V you could still drive the IN digital control input to 5V. Minimum power is lost when the IN pin, is driven rail-to-rail.

SUPPLY VOLTAGE SEQUENCING

It is good general practice to first apply the supply voltage to a CMOS device before any other supply on other pins. This is also true for the LMS4684 analog switch which is a CMOS device.

However if it is necessary to have an analog signal applied before the supply voltage is applied and the analog signal supply is not limited to 20mA max, a diode connected between the supply voltage and the V^+ pin as shown in the figure below will supply adequate input protection. This will limit the max analog voltage to a diode drop below V^+ . This diode D1 will also provide protection against some overvoltage situations.

FIGURE 1. Overvoltage Protection Circuitry

PCB LAYOUT

Both the LLP and micro SMD packages offer enhanced board real estate savings because of their tiny footprints. These tiny packages are capable of supporting up to an absolute maximum of 400mA of continuous current because of the advanced thermal handling capabilities.

The LLP package has the exposed die attach pad internally connected to the internal circuit GND. When this pad is soldered to copper on the PCB board according to Application Note AN-1187 the full thermal capability of the LLP package can be achieved without additional bulky heat sinks to dissipate the heat generated. The micro SMD package has a similar capability to help dissipate heat generated through Bumps B2 and C2 which are not electrically connected. To enhance heat dissipation of the micro SMD package B2 and C2 could be connected to the GND pin and through copper traces on the board.

Please see Application Note AN-1112 for micro SMD package considerations.

Notes

LIFE SUPPORT POLICY

NATIONAL'S PRODUCTS ARE NOT AUTHORIZED FOR USE AS CRITICAL COMPONENTS IN LIFE SUPPORT DEVICES OR SYSTEMS WITHOUT THE EXPRESS WRITTEN APPROVAL OF THE PRESIDENT AND GENERAL COUNSEL OF NATIONAL SEMICONDUCTOR CORPORATION. As used herein:

1. Life support devices or systems are devices or systems which, (a) are intended for surgical implant into the body, or (b) support or sustain life, and whose failure to perform when properly used in accordance with instructions for use provided in the labeling, can be reasonably expected to result in a significant injury to the user.
2. A critical component is any component of a life support device or system whose failure to perform can be reasonably expected to cause the failure of the life support device or system, or to affect its safety or effectiveness.

BANNED SUBSTANCE COMPLIANCE

National Semiconductor certifies that the products and packing materials meet the provisions of the Customer Products Stewardship Specification (CSP-9-111C2) and the Banned Substances and Materials of Interest Specification (CSP-9-111S2) and contain no "Banned Substances" as defined in CSP-9-111S2.
