

Smart Power High-Side-Switch for Industrial Applications Eight Channels: 8 x 200 mΩ

Features

- Output current 0,625 A per channel
- Short circuit protection
- Maximum current internally limited
- Overload protection
- Input protection
- Overvoltage protection (including load dump)
- Undervoltage shutdown with auto-restart and hysteresis
- Switching inductive loads
- Thermal shutdown with restart
- Thermal independence of separate channels
- ESD - Protection
- Loss of GND and loss of V_{bb} protection
- Very low standby current
- Reverse battery protection
- Programmable input for CMOS or $V_{bb}/2$
- Common diagnostic output (current output) for overtemperature

Product Summary

Overvoltage protection	$V_{bb(AZ)}$	47	V
Operating voltage	$V_{bb(on)}$	11...45	V
On-state resistance	R_{ON}	200	mΩ
Operating temperature	T_a	-30...+85	°C

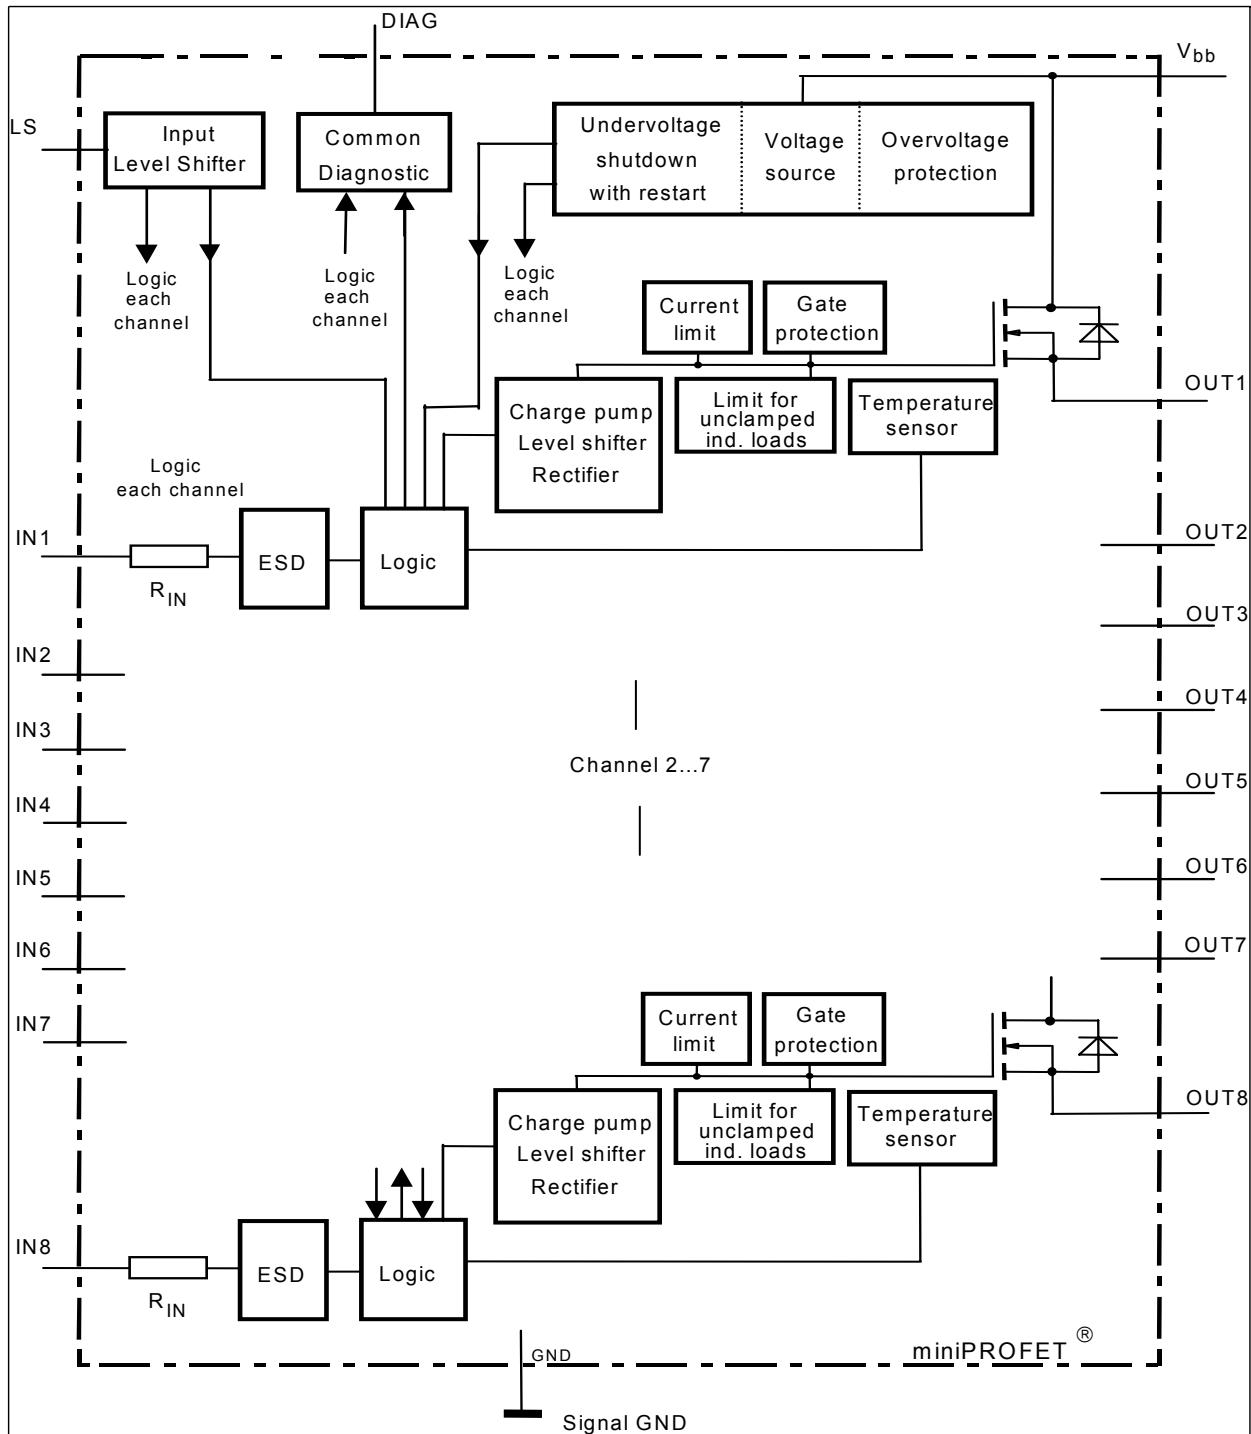

Application

- Output driver for industrial applications (PLC)
- All types of resistive, inductive and capacitive loads
- µC or optocoupler compatible power switch for 24 V DC industrial applications
- Replaces electromechanical relays and discrete circuits

General Description

N channel vertical power FET with charge pump, ground referenced CMOS or $V_{bb}/2$ compatible input and common diagnostic feedback, monolithically integrated in Smart SIPMOS® technology. Providing embedded protective functions.

Programmable input:

Functional description LS-Pin:

With using the LS-pin it is possible to change the input turn-on and -off threshold voltage between CMOS and half supply voltage level.

Therefore you have either to connect the LS-pin to GND (state 1) or to supply voltage (state 2). If the LS-pin is not connected the input threshold voltages are automatically at CMOS level, caused by an internal pull down to GND with typ. 800kΩ (see circuit).
