Product Description

3-Phase relay for detection of incorrect phase sequence, total and partial phase loss. Supply range from 208 to 480 VAC covered by three multi-voltage relay. For mounting on DIN-rail. Housing 17.5 mm wide for SPDT version and

35.5 mm for DPDT version, suitable both for back and front panel mounting. The device detects regenerated voltage up to 85% of the nominal voltage (phase-phase).

Mode of Operation

DPA51 and DPA71 monitor their own 3-phase power supply voltage. The relays operate when all the phases are present and the phase sequence is correct. The relays release when one phase-phase voltage drops

below 85% of the other phase-phase voltages or when the phase sequence is wrong.

Example 1

The relay monitors that the power supply has the correct phase sequence and that all phases are present.

Example 2

The relay releases in case of interruption of one or more phases, provided that the regenerated voltage does not exceed 85% of the phase-phase voltage.
