Type J Pilot Lights - Description and Selection

Pilot Lights, Push-To-Test and Remote Test Pilot Lights

JP1R29

Class 9001 Type J compact pilot lights are designed to be mounted in a 0.69" (11/16") diameter mounting hole. Each terminal will accept up to two #14 AWG wires (CU only). Type J compact pilot lights meet NEMA Type 4 (watertight) and NEMA Type 13 (oiltight) requirements. Type JT push-to-test pilot lights have contacts built into the encapsulated body. Type JTR remote test pilot lights have dual inputs for one push remote testing – all you need is a push button with a current rating equal to or greater than the total lamp draw. Type JTR remote test pilot lights can also be energized from two separate input signals of the same voltage and polarity. This is done by wiring the "test" terminal to the second input signal.

XVL Miniature LED Pilot Lights - Specifications

General

This new Telemecanique range of LED pilot lights meets the very latest requirements in signalling techniques.

Because of their small size, Ø8 and Ø12 mm fixing pilot lights are particularly suitable for the following applications:

- mounting on small control stations.
- shallow depth mounting.
- large number of signalling units on a control station (low power dissipation).

Small diameter LED pilot lights also have sealed front faces (IP 65 option available). An unsealed Ø8 mm fixing model with protruding LED and black bezel (aesthetic appearance) is also offered.

Advantages:

LED pilot lights have many advantages:

- very long life and so low maintenance costs (bulb test no longer required).
- highly resistant to shocks, vibrations and over-voltage.
- low power consumption which, for example, allows compatibility with programmable controller outputs by parallel connection with the load, to give a direct indication of output state.
- very high reliability.

Quick fixing by means of tags for soldered clips for Ø8 mm type, or threaded connectors Ø12 mm type. Safe connection due to integral ballast resistor and reverse polarity protection device.

Conforming to standards	IEC 60947-5-1, NF C 63-140, VDE 0660-200.
Protective treatment	Standard version: "TC" treatment.
Ambient temperature	Operation: -25 °C to + 70 °C (-13 °F to +158 °F). Storage: -40 °C to + 70 °C (-40 °F to +158 °F).

- ③ On neon Voltages use clear color caps only.
- ④ The color of the color cap must be the same color as the LED Voltage chosen (i.e., red LED uses red color cap) or use clear color cap.
- ⑤ Add the color code as chosen from the color cap table. **Example: K2L25⑤ with a blue 1 3/8 mushroom button = K2L25L20**
- ⑥ The only difference between a no guard (K2L②) operator and mushroom button operators is the color cap.

Push Buttons and Operator Interface - Type K and SK, 30 mm Voltage Assembly Codes

This page lists light module code numbers that are used in operators listed on pages 126-127.

- Neon type light modules – use CLEAR color caps only.
- LED light modules use a lamp with 7 element LED clusters that provide illumination similar to incandescent illumination.
- LED light modules require the color cap color and the LED color be the same or use a clear color cap.

Push Buttons and Operator Interface - Type K and SK, 30 mm Selector Switch Selection Guide

Shown below is a simplified method of selecting a selector switch to meet almost any combination of contact sequences.

Step No. 1

Determine the contact sequence(s) required. Set up a target table like the one shown for the example below.

Example:

Contact Sequence	↖	↑	↗
A	1	0	0
B	0	1	0
C	0	0	1

0 – contact open
1 – contact closed

Step No. 2

Look for a cam type common to all sequences in Table 1, 2 or 3. For the example above, Table 2 would be used. For the contact sequences A(1 0 0), B(0 1 0) and C(0 0 1) of the example above, cam types F and L are common to all 3 sequences.

Step No. 3

Next, the cam type common to all the sequences (If several cam types are common, choose one.) is used to find the operator type number. Go to the proper page number as indicated in the table below:

Number of Positions	Push Button Line	Page Number
2	Type K Type SK	130, 131, 142, 143
3	Type K Type SK	132, 133, 144, 145
4	Type K Type SK	134, 146

If for the example above:

- A manual return operator with a standard black knob is required and
- If the F cam type were chosen, the operator type number would be:
Type K Line – Class 9001 Type KS46B (From page 132)
Type SK Line – Class 9001 Type SKS46B (From page 144)
- If the L cam type were chosen, the operator type number would be:
Type K Line – Class 9001 Type KS401B (From page 132)
Type SK Line – Class 9001 Type SKS401B (From page 144)

Step No. 4:

Determine the contact blocks required by using the same table used for Step No. 2.

If for the example above:

- The F cam type were chosen:
A 9001KA3 mounted on side no. 2 would be used for sequence A(1 0 0).
A 9001KA3 mounted on side no. 1 would be used for sequence B(0 1 0).
A 9001KA2 mounted on side no. 1 or 2 would be used for sequence C(0 0 1).
- The L cam type were chosen:
A 9001KA2 mounted on side no. 2 would be used for sequence A(1 0 0).
A 9001KA2 mounted on side no. 1 or a 9001 KA3 mounted on side no. 2 would be used for sequence B(0 1 0).
A 9001KA3 mounted on side no. 1 would be used for sequence C(0 0 1).

One Type KA1 double circuit block can be used in place of one Type KA2 single circuit block and one Type KA3 single circuit block mounted on the same side.

 Pilot Light For Intrinsically Safe Circuits (NEMA Type 4X)	Intrinsically safe equipment must not release electrical or thermal energy capable of igniting certain explosive or combustible hazardous atmospheres, for which the equipment has been tested. These pilot lights are intrinsically safe when used with a suitable approved barrier or barrier relay (Class 8501 Type TO or NY2). These pilot lights are Factory Mutual (FM approved). Consult your local Square D Sales Office for further details. These pilot lights are fully encapsulated – there are no replaceable parts – except for the SK40 ring nut. Use KN100 series plastic legend plates as shown on pages 152 and 153.		KP44R	KP44G	KP44Y (Yellow Color Cap)	—

- ① Add the voltage assembly code as chosen from voltage assembly code table on page 134. **EXAMPLE: KT①R31 with a 60VAC red LED voltage=KT37LRR31**
- ② Add the color code as chosen from the color cap table. **EXAMPLE: KP1② with a blue fresnel cap = KP1L31**
- ③ The color cap must be the same color as the LED voltage chosen (i.e., green LED use a green color cap) or use clear cap.
- ④ On neon voltages use clear color caps only.
- ⑤ On remote test pilot lights use only full voltage or resistor voltage assembly codes. Do not choose LED, neon or transformer codes. For AC use only.

Push-To-Test Ground Detector Pilot Light (Contact Block Included — But NOT Legend Plate or Color Cap)

Used in pairs to indicate a grounded condition in a control circuit fed from a grounded center-tapped transformer. The Type KT50 is commonly used in press control circuits, and fulfills the requirements of the ground detector called for in ANSI B11.1 (1971), Par. E3.6.5. Consult local Square D Sales Office for proper application.

The joystick operator is ideal for applications where only one circuit is to be energized at one time. The three position joy stick closes one circuit each in Up-Down or Right-Left position with all circuits open in center position. The five position operator closes one circuit each in Up, Down, Left and Right positions with all circuits open in center position. Momentary contact operators are spring return to the center position. Maintained operators remain in each position and must be reset manually. Operators with latch cannot be operated until the latch button in center of handle is pressed.

① These operators can be ordered complete with contact blocks, for maximum block usage – see page 155. Add the "H" number chosen from page 151 to the end of the operator type number. Use Legend Plate 9001KN900

- ① These operators can be ordered complete with contact blocks, for maximum block usage – see page 155. Add the "H" number chosen from page 151 to the end of the operator type number. **EXAMPLE: SK2L36R20+H2 (2 KA1) =SK2L36R20H2.**
- ② Add the voltage assembly code as chosen from voltage assembly code table at right. **EXAMPLE: SK2L② with a 240 Vac-dc voltage=SK2L25.**
- ③ On neon voltages use clear color caps only.
- ④ The color of the color cap must be the same color as the LED voltage chosen (i.e., red LED uses red color cap) or use a clear cap.
- ⑤ Add the color code as chosen from the color cap table below. **EXAMPLE: SK2L25⑤ with a blue 1 3/8" mushroom button=SK2L25L20.**
- ⑥ The only difference between a no guard (SK2L) operator and mushroom button operators is the color cap.

 <p>Pilot Light For Intrinsically Safe Circuits (NEMA 4X)</p>	Intrinsically safe equipment must not release electrical or thermal energy capable of igniting certain explosive or combustible hazardous atmosphere, for which the equipment has been tested. These pilot lights are intrinsically safe when used with a suitable approved barrier or barrier relay (Class 8501 Type TO or NY2). These pilot lights are Factory Mutual (FM approved). Consult your local Square D Sales Office for further details. These pilot lights are fully encapsulated — there are no replaceable parts — except for the SK40 ring nut. - ① Add the voltage assembly code as chosen from voltage assembly code table, page 145.
EXAMPLE: SKT①R31 with a 60Vac red LED voltage = SKT37LRR31.
- ② Add the color code as chosen from the color cap table below.
EXAMPLE: SKP1② with a blue fresnel cap = SKP1L31.
- ③ The color cap must be the same color as the LED voltage chosen (i.e., green LED use a green color cap) or use a clear cap.
- ④ On neon voltages use clear color caps only.
- ⑤ Use only full voltage or resistor voltage assembly codes on remote test pilot lights. Do not choose LED, or neon transformer codes. For AC use only.

Push Buttons and Operator Interface - Type K and SK, 30 mm Contact Blocks - Type K, SK, KX, and T

The Class 9001 Type KA contact blocks have been improved. The most noticeable change is that the terminals are Fingersafe® contact blocks (meeting VDE 0106 Part 100). They also have one screw mounting and captive backed out plus/minus terminal screws. These contact blocks still use the same reliable double break direct acting contacts used since 1965. Because of the wiping action of these contacts, they are suitable for use with programmable controllers. All contact blocks listed below will accept up to 2 #12-#24 solid or stranded wires. Types KA1, KA3, KA31, and KA33 NC contacts are direct opening.

Reed Contact Blocks & Hazardous Location Information - Type K, SK, KX, and T

In hazardous locations, it is not always required to use explosion-proof equipment like the Class 9001 Type BR control stations. It can save money to know what type of hazardous location exists. If you're not sure what type of hazardous location exists, the "Summary of Classification" Chart may help. If not, contact your local electrical inspector. When you know what class, division, and group(s) exists, see the table in the lower left-hand corner of this page for what Square D has to offer.

Summary Of Classification Chart

- ① An intrinsically safe system requires either a Class 8501 Type TO or NY2 barrier relay or an intrinsically safe barrier to restrict the energy available in the area classified as a hazardous area to a level less than that required to cause an explosion. In an intrinsically safe system, any **non-illuminated** Class 9001 operator or control station with standard contacts can be used. No illuminated operators, except the Class 9001 Type KP44 intrinsically safe pilot light, may be used.
- ② Any Class 9001 Type K, SK or KX operator can be used in an area classified as Class I, Division 2 hazardous locations.
- Only logic (KA40 series) or power (KA50 series) reed contact blocks are used.
 - All Type K and SK illuminated operators are UL approved for use in Class I Division 2 areas. ♦
 - Type KX illuminated operators do not use 4 lamp light modules, or 2 lamp light modules other than the transformer type. ♦
 - The operators are mounted in Type KY, KYSS, KYAF, SKY enclosures.
- ③ Any Class 9001 Type K, SK, or KX operator mounted in a Class 9001 Type KY, KYSS, KYAF, SKY enclosure may be used, except potentiometer operators.
- For ② and ③: UL Listed: File E10054, CCN NOIV.
For ♦: Add Form Y243 to single lamp Push To Test pilot lights.

All contact blocks listed below will accept #12-18 solid or stranded wire.

Pilot Light For Intrinsically Safe Circuits — NEMA / UL Type 4X

	Intrinsically safe equipment must not release electrical or thermal energy capable of igniting certain explosive or combustible hazardous atmosphere, for which the equipment has been tested. Listed below are pilot lights that are intrinsically safe when used with a suitable approved barrier or barrier relay (Class 8501 Type TO or NY2. These pilot lights are Factory Mutual FM# J.I. OH4A2, AX, 3610 (FM approved). Consult your local Square D Sales Office for further details. These pilot lights are fully encapsulated - there are no replaceable parts - except for the SK40 ring nut. Use KN100 series plastic legend plates as shown on pages 152 and 153.

Push Buttons and Operator Interface - Type K and SK, 30 mm "H" Numbers

The design of the Class 9001 Type KA contact blocks allows them to be mounted side by side and/or in tandem.

The system illustrated below has been set up to enable an operator and a particular arrangement of contact blocks to be specified by a single type number. Operators and contact blocks will be shipped completely assembled.

EXAMPLE: A Type KR1B push button with 2 Type KA1 contact blocks would be Class 9001 Type KR1BH2.

Interlock

For mechanically interlocking two push buttons so that only one button can be depressed at a time. A Type K3 attachment is furnished with the 9001 KR11, KR12, SKR11, SKR12, SKRU1 and SKRU11 operators. However, maintained operators are supplied here and the K3 interlock serves to release one of the buttons when the other is depressed. When used with momentary contact buttons, the K3 interlock **does not** hold the buttons in the depressed position. It simply prevents pushing both buttons at the same time. The Type K3 interlock can be mounted behind the operators. Operators and blocks not included.

Push Button and Operator Interface - Type KX 30 mm

Selector Switch Selection Guide

Shown below is a simplified method of selecting a selector switch to meet almost any combination of contact sequences.

Step No. 1

Determine the contact sequence(s) required. Set up a target table like the one shown for the example below.

Example:

Contact Sequence	↖	↑	↗
A	1	0	0
B	0	1	0
C	0	0	1

0 – contact open
1 – contact closed

Step No. 2

Look for a cam type common to all sequences in Table 1, 2 or 3. For the example above, Table 2 would be used. For the contact sequences A(1 0 0), B(0 1 0) and C(0 0 1) of the example above, cam types F and L are common to all 3 sequences.

Step No. 3

Next, the cam type common to all the sequences (If several cam types are common, choose one.) is used to find the operator type number. Go to the proper page number as indicated in the table below:

Number of Positions	Push Button Line	Page Number
2	Type KX	167
3	Type KX	167
4	Type KX	167

If for the example above:

- A manual return operator with a standard black knob is required and
 - If the F cam type were chosen, the operator type number would be: Type KX Line – Class 9001 Type KXSDFB (from page 167)
 - If the L cam type were chosen, the operator type number would be: Type KX Line – Class 9001 Type KXSDLB (from page 167)

Step No. 4:

Determine the contact blocks required by using the same table used for Step No. 2.

If for the example above:

- The F cam type were chosen:
 - A 9001KA3 mounted on side no. 2 would be used for sequence A(1 0 0).
 - A 9001KA3 mounted on side no. 1 would be used for sequence B(0 1 0).
 - A 9001KA2 mounted on side no. 1 or 2 would be used for sequence C(0 0 1).
- The L cam type were chosen:
 - A 9001KA2 mounted on side no. 2 would be used for sequence A(1 0 0).
 - A 9001KA2 mounted on side no. 1 or a 9001 KA3 mounted on side no. 2 would be used for sequence B(0 1 0).
 - A 9001KA3 mounted on side no. 1 would be used for sequence C(0 0 1).

One Type KA1 double circuit block can be used in place of one Type KA2 single circuit block and one Type KA3 single circuit block mounted on the same side.

Push Button and Operator Interface - Type KX 30 mm Square Multifunction Selector Switches

For use in hazardous locations – See page 173.

The selector switches listed below do not include a legend plate. **Legend plates are required to be assembled into the operators.** Maintained selector switches will accept up to two Type KA contact blocks mounted in tandem (a total of four blocks). Spring return selector switches will accept a maximum of two Type KA contact blocks mounted side by side. To order a selector switch with a knob other than black, substitute the proper color code from the selector switch knob table.

Example: To get a selector switch similar to a 9001KXSDCB except with a red knob, order a KXSDCR.

⑤ Each KXAC48 includes a clear cover and 1 each of all colors. Only 1-KXAC48 should be required per KXPC operator — unless the same color is required for more than 1 position. If 2 of the same colors are required — order 2-KXAC48, etc.

⑥ When specifying color codes — the first will be installed in #1, the second in #2, the third in #3 and the fourth in #4.

All Type KX push buttons and pilot lights have a blank insert as standard. These blank inserts can be custom marked using a marking pen, a mechanical lettering set, press letters, or a tape lettering machine that marks a tape which can then be transferred to the blank insert.

To have legend inserts installed into the operators, order the operator as normal and then tell where to install the legend inserts using the numbered positions shown on the operator ordered.

Contact Blocks - Type K, SK, KX, and T

The Class 9001 Type KA contact blocks have been improved. The most noticeable change is that the terminals are Fingersafe® contact blocks (meeting VDE 0106 Part 100). They also have one screw mounting and captive backed out plus/minus terminal screws. These contact blocks still use the same reliable double break direct acting contacts used since 1965. Because of the wiping action of these contacts, they are suitable for use with programmable controllers. All contact blocks listed below will accept up to 2 #12-#24 solid or stranded wires. Types KA1, KA3, KA31, and KA33 NC contacts are direct opening.

Push Button and Operator Interface - Type KX 30 mm Reed Contact Blocks & Hazardous Location Information - Type K, SK, KX, and T

In hazardous locations, it is not always required to use explosion-proof equipment like the Class 9001 Type BR control stations. It can save money to know what type of hazardous location exists. If you're not sure what type of hazardous location exists, the "Summary of Classification" Chart may help. If not, contact your local electrical inspector. When you know what class, division, and group(s) exists, see the table in the lower left hand corner of this page for what Square D has to offer.

Summary Of Classification Chart

Class	Division	Group
I. Gas 	1. Hazard May Exist May Exist In Atmosphere Under Normal Operating Conditions.	A. Acetylene
		B. Hydrogen and Manufactured Gases containing Hydrogen
		C. Petrochemicals (e.g. ethylene)
		D. Petrochemicals (e.g. alcohol)
	2. Potential Hazard A. May be present in atmosphere only under abnormal circumstances. B. Location adjacent to Division 1 location.	A. Acetylene
		B. Hydrogen and Manufactured Gases Containing Hydrogen
		C. Petrochemicals (e.g. ethylene)
		D. Petrochemicals (e.g. alcohol)
II. Dust 	1. Hazard May Exist May Exist In Atmosphere Under Normal Operating Conditions.	E. Conductive and Combustible Dust (Resistivity <math><10^5</math> ohms/cm)
		F. Carbonaceous Dusts (Resistivity >math>>10^2</math> ohm/cm but $\le 10^5$ ohm/cm)
		G. Non-Conductive Combustible Dust (Resistivity >math>> 10^5</math> ohms/cm)
III. Fibers 	1. Production Areas	Easily Ignitable Fibers or Flyings

*: An intrinsically safe system requires either a Class 8501 Type TO or NY2 barrier relay or an intrinsically safe barrier to restrict the energy available in the area classified as a hazardous area to a level less than that required to cause an explosion. In an intrinsically safe system, any **non-illuminated** Class 9001 operator or control station with standard contacts can be used. No illuminated operators, except the Class 9001 Type KP44 intrinsically safe pilot light, may be used.

◆ Any Class 9001 Type K, SK or KX operator can be used in an area classified as Class I, Division 2 hazardous locations.

- Only logic (KA40 series) or power (KA50 series) reed contact blocks are used.
- All Type K and SK illuminated operators are UL approved for use in Class I Division 2 areas. ■
- Type KX illuminated operators do not use 4 lamp light modules, or 2 lamp light modules other than the transformer type. ■
- The operators are mounted in Type KY, KYSS, KYAF, SKY enclosures.

▲ Any Class 9001 Type K, SK, or KX operator mounted in a Class 9001 Type KY, KYSS, KYAF, SKY enclosure may be used, except potentiometer operators.

For ◆ and ▲: UL Listed: File E10054, CCN NOIV.
For ■: Add Form Y243 to single lamp Push To Test pilot lights.

All contact blocks listed below will accept #12-18 solid or stranded wire.

The design of the Class 9001 Type KA contact blocks allows them to be mounted side by side and/or in tandem.

The system illustrated below has been set up to enable an operator and a particular arrangement of contact blocks to be specified by a single type number. Operators and contact blocks will be shipped completely assembled.

EXAMPLE: A Type KXRCGR push button with 2 Type KA1 contact blocks would be Class 9001 Type KXRCGRH2.

Custom Built Control Stations

The catalog numbers shown include the enclosure only. A complete assembled control station is the enclosure plus all control units to be installed. **Orders must be accompanied with a key sheet (M-7687) or sketch showing all control units in their desired locations. Specify the marking on the nameplates for the enclosure.** The standard nameplate size is 1.69" (43 mm) by 0.5" (13 mm) inches. It has a black field with white letters. For nameplates other than our standard, contact your local Square D Sales Office. There is an additional charge to move or add an additional conduit hole or change the diameter of the conduit.

Example: Add a 1 inch conduit to the top (nonstandard location) of a KY6 enclosure and increase the bottom conduit from 3/4" to 1 inch (19 to 25 mm). There would be an additional charge for the top conduit and the bottom conduit. If 20 or more identical stations are ordered at one time, there is no additional charge.

Push Button and Operator Interface - Type B and 30 mm Control Stations Types K, SK, KX, and T — 30 mm Flush Plates

Stainless Steel NEMA Type 1 Flush Plates

These flush plates accept Type K, SK, KX and T operators and contact blocks and may be used with a standard 2 x 3 general purpose switch box. A 2 1/2" deep box should be used with two Type K contact blocks mounted side by side. If two Type K contact blocks mounted in tandem are needed, a 3 1/2" deep box should be used. Although oiltight/watertight operators are used, an assembled station using the flush plates is **not oiltight/watertight**. The kits include the stainless steel flush plate, cover screws and a set of liners. The liners must be used to maintain electrical clearance.

Push Button and Operator Interface - Type B and 30 mm Control Stations

Types K, SK, KX, and T — 30 mm Ordering Instructions

INSTRUCTIONS FOR ORDERING ASSEMBLED CONTROL STATIONS

- Use separate Key Sheet for each different control station arrangement on order.
- Select locations on sketch (reverse side) which illustrate manner in which station is to be mounted. Example: Selection of location A, B, C and D indicates a four unit station mounted with its long axis vertical and the legend plates mounted accordingly. Selection of locations A, G, N and U indicates mounting with long axis horizontal.
- Each interlock attachment Type K-3 must be specified at two adjacent locations. Type KR-11 or Type KR-12 must be specified at two adjacent locations. Type KRD Time Delay Units require space equal to two push button mounting holes. The unused hole must be covered with at Type K-51 or K-52 Closing Plate. The time delay unit must be positioned with the contacts adjacent to the unused hole. The unused hole may be located above, below, right or left of the unit.
- Types KN-3 and KN-4 legend plates will not fit upright on 2, 3 or 4 unit Type KY or Type KZ enclosures with long axis vertical. Type KYC enclosures must use Type KN-8 legend plates.
- Large (2 1/4" Dia.) mushroom button operators can not be mounted in adjacent locations.
- Enclosures have sufficient depth to accommodate two contact blocks side-by-side on illuminated operators (Types K, SK and T only).

Push Button and Operator Interface - Type B and 30 mm Control Stations Types K, SK, KX, and T — 30 mm Contact Blocks

The Class 9001 Type KA contact blocks have been improved. The most noticeable change is that the terminals are FINGERSAFE® contact blocks (meeting VDE 0106 Part 100). They also have one screw mounting and captive backed out plus/minus terminal screws. These contact blocks still use the same reliable double break direct acting contacts used since 1965. Because of the wiping action of these contacts, they are suitable for use with programmable controllers. All contact blocks listed below will accept up to 2 #12-#24 solid or stranded wires. Types KA1, KA31, KA3, and KA33 N.C. contacts are direct opening. (→)

Push Button and Operator Interface - Type B and 30 mm Control Stations

Types K, SK, KX, and T — 30 mm Reed Contact Blocks & Hazardous Location Information

In hazardous locations, it is not always required to use explosion-proof equipment like the Class 9001 Type BR control stations. Knowing what type of hazardous location exists will permit you to select the most economical solution to your application. If you're not sure what type of hazardous location exists, the "Summary of Classification" chart may help. If not, contact your local electrical inspector. When you know what class, division, and group(s) exists, see the table in the lower lefthand corner of this page for what Square D has to offer.

Summary Of Classification Chart

- ① An intrinsically safe system requires either a Class 8501 Type TO or NY2 barrier relay or an intrinsically safe barrier to restrict the energy available in the area classified as a hazardous area to a level less than that required to cause an explosion. In an intrinsically safe system, any **non-illuminated** Class 9001 operator or control station with standard contacts can be used. No illuminated operators, except the Class 9001 Type KP44 intrinsically safe pilot light, may be used.
- ② Any Class 9001 Type K, SK or KX operator can be used in an area classified as Class I, Division 2 hazardous locations.
- Only logic (KA40 series) or power (KA50 series) reed contact blocks are used.
 - All Type K and SK illuminated operators are UL approved for use in Class I Division 2 areas. ♦
 - Type KX illuminated operators do not use 4 lamp light modules, or 2 lamp light modules other than the transformer type. ♦
 - The operators are mounted in Type KY, KYSS, KYAF, SKY enclosures.
- ③ Any Class 9001 Type K, SK, or KX operator mounted in a Class 9001 Type KY, KYSS, KYAF, SKY enclosure may be used, except potentiometer operators.
- For ♦: Add Form Y243 to single lamp Push To Test pilot lights.

All contact blocks listed below will accept #12-18 solid or stranded wire.

Push Button and Operator Interface - Type BW, SKYP & XACA Pendant Stations SERIPLEX Control Bus Version 2 — Material Pull Pendant Station

The **Material Pull Pendant Stations** provide an interface between the SERIPLEX® control bus and a single input push button operator enclosed in a pendant station. Single-bit bus interface circuitry is used in this unit. If multiplexed operation is used by the CPU interface card, the pendant is scanned every frame. This pendant is not capable of being multiplexed.

Features

- Durable enclosure rated NEMA Type 12.
- Bus powered lamp modules don't require an auxiliary power supply or additional power conductors.
- Bus powered lamp modules use high visibility, low current consumption LED lamps, providing long life and greater system flexibility.
- Mini-style quick-change connectors provide for easy pendant installation and change out.
- LED indicators provided on the SERIPLEX module show power-on status, input status and output status – a convenient installation and troubleshooting aid.

About Material Pull Systems

A SERIPLEX Material Pull Pendant is used to control the floor stock of parts being installed during a final assembly operation. Typically, as an assembly worker uses parts they monitor the stock of material being used. When stock falls to a predetermined level, the assembly worker pushes the button on the Material Pull Pendant and a signal is sent to the computer requesting parts for that specific assembly operation. The illuminated push button in the pendant flashes to indicate the location where the parts are needed and a lift truck driver is dispatched with the parts. The lift truck driver presses the pendant push button to indicate that the parts have been delivered and to reset the system.
