

## HTG3500 Series – Relative Humidity and Temperature Module

- Suitable for small bulk assembly
- Product free from Lead, Cr (6+), Cd and Hg. Compliant with RoHS
- Full interchangeability. Better than  $\pm 3\%RH$  and  $\pm 0.25^\circ C$
- Humidity calibrated within  $\pm 3\% RH @ 55\% RH$
- Temperature measurement through NTC direct output

### DESCRIPTION

Based on the rugged MEAS-France humidity sensor, the HTG3500 Series are dedicated humidity and temperature plug and play transducers designed for OEM applications where reliable and accurate measurements are needed. Direct interface with a micro-controller is made possible with the modules humidity linear voltage and direct NTC outputs. The HTG3500 Series are designed for high volume and demanding applications where power consumption is critical.

### FEATURES

- Demonstrated reliability and long term stability
- Reliability not affected by repeated condensation

### APPLICATIONS

- Automotive
- Home Appliance
- Printers

...

### PERFORMANCE SPECS

#### MAXIMUM RATINGS

Ratings	Symbol	Value	Unit
Storage Temperature	$T_{stg}$	-40 to +125	$^\circ C$
Supply Voltage (Peak)	$V_{cc}$	20	$V_{dc}$
Humidity Operating Range	RH	0 to 100	%RH
Temperature Operating Range	$T_a$	-40 to +110	$^\circ C$
Maximum Output Current (Peak)	$I_{peak}$	3	mA
Maximum Power	$P_d$	10	mW

**Peak conditions:** less than 10% of the operating time.

## HTG3500 Series - Relative Humidity and Temperature Module

### ELECTRICAL CHARACTERISTICS

(@T=23°C, R<sub>L</sub>>1MΩ unless otherwise noted)

Humidity Characteristics	Symbol	Min	Typ	Max	Unit
Humidity Measuring Range	RH	0		100	%RH
Relative Humidity Accuracy (10% to 95%RH)			±3	±5	%RH
Temperature coefficient (10°C to 50°C)	T <sub>cc</sub>		-0.05	-0.1	%RH/°C
Recovery time after 150 hours of condensation	t		10		s
Humidity hysteresis			+/-1		%RH
Output impedance	Z			50	Ω
Sink current capability (R <sub>L_Min</sub> = 8 kOhms) <sup>(1)</sup>	I			1	mA
Warm up time (90% of signal)	t <sub>w</sub>		150		ms
Time Constant (at 63% of signal) 33%RH to 75%RH <sup>(2)</sup>	τ		5	10	s

(1) Conditions of sink current: V<sub>out</sub> + 0.054V (3%RH) at V<sub>out</sub> = 0.600 V (V<sub>out</sub> min)

(2) At 1m/s air flow

Temperature Characteristics*	Symbol	Min	Typ	Max	Unit
Nominal resistance @ 25°C	R	9.9	10	10.1	kΩ
Beta value : B25/50	B	3346	3380	3414	K
Temperature measuring range	T <sub>a</sub>	-40		85	°C
Nominal Resistance Tolerance at 25°C	R <sub>n</sub>		1		%
B value tolerance	B		1		%
Time Constant	τ		10		s

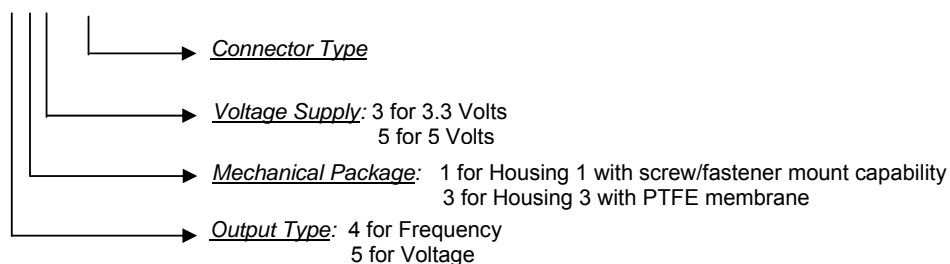

\* Except for low temperatures

### POWER SUPPLY OPTION OF HTG3500 SERIES AT 3.3V<sub>DC</sub> OR AT 5V<sub>DC</sub>

At 3.3V<sub>DC</sub> or at 5V<sub>DC</sub> power supply, there is no measurable impact of type of powering on temperature and RH accuracy.

### NOMENCLATURE

#### HTG3XYZ yyy

## HTG3500 Series - Relative Humidity and Temperature Module

### SPECIFIC ELECTRICAL AND METROLOGICAL CHARACTERISTICS

#### • HTG35Y3

Characteristics	Symbol	Min	Typ	Max	Unit
Voltage Supply <sup>(1) (2)</sup>	V <sub>cc</sub>	3	3.3	3.46	V <sub>dc</sub>
Nominal Output @55%RH	V <sub>out</sub>	1.462	1.515	1.568	V
Humidity Average Sensitivity	ΔmV/RH	-	+18	-	mV/%RH
Current consumption	I <sub>cc</sub>	-	1.0	1.2	mA dc

(1) Module is ratiometric to voltage supply

(2) Maximum power supply ramp up time to VCC should be less than 20ms

#### • HTG35Y5

Characteristics	Symbol	Min	Typ	Max	Unit
Voltage Supply <sup>(1) (2)</sup>	V <sub>cc</sub>	4.75	5	5.25	V <sub>dc</sub>
Nominal Output @55%RH	V <sub>out</sub>	2.401	2.480	2.559	V
Humidity Average Sensitivity	ΔmV/RH	-	+26	-	mV/%RH
Current consumption	I <sub>cc</sub>	-	1.2	1.5	mA dc

(1) Module is ratiometric to voltage supply

(2) Maximum power supply ramp up time to VCC should be less than 20ms

$$V_{out} = 8.43E^{-4} RH^3 - 0.1485 RH^2 + 34.16 RH + 909$$

$$RH = -1.564E^{-9} V_{out}^3 + 1.205E^{-5} V_{out}^2 + 8.22E^{-3} V_{out} - 15.6$$

with V<sub>out</sub> in mV and RH in %

#### LINEAR EQUATIONS

$$V_{out} = 26.23 RH + 1032$$

$$RH = 0.03812 V_{out} - 39.36$$

with V<sub>out</sub> in mV and RH in %

#### POLYNOMIAL EQUATIONS

$$V_{out} = 5.57E^{-4} RH^3 - 9.81E^{-2} RH^2 + 22.55 RH + 477.2$$

$$RH = -5.38E^{-9} V_{out}^3 + 2.55E^{-5} V_{out}^2 + 1.9E^{-2} V_{out} - 13.5$$

with V<sub>out</sub> in mV and RH in %

#### LINEAR EQUATIONS

$$V_{out} = 17.52 RH + 544.1$$

$$RH = 0.057 V_{out} - 31.0$$

with V<sub>out</sub> in mV and RH in %

## HTG3500 Series - Relative Humidity and Temperature Module

- Humidity error budget conditions at 23°C

HTG3500 series modules are specified for maximum accuracy measurements within 10 to 95 %RH.

Excursion out of this range (< 10% or > 95% RH, including condensation) does not affect the reliability of HTG3500 series characteristics.

### TEMPERATURE SENSOR

- Typical temperature output

Depending on the needed temperature measurement range and associated accuracy, we suggest two methods to access to the NTC resistance values.

$$R_T = R_N \times e^{\beta \left( \frac{1}{T} - \frac{1}{T_N} \right)}$$

$R_T$	NTC resistance in $\Omega$ at temperature T in K
$R_N$	NTC resistance in $\Omega$ at rated temperature T in K
T, $T_N$	Temperature in K
$\beta$	Beta value, material specific constant of NTC
e	Base of natural logarithm (e=2.71828)

① The exponential relation only roughly describes the actual characteristic of an NTC thermistor can, however, as the material parameter  $\beta$  in reality also depend on temperature. So this approach is suitable for describing a restricted range around the rated temperature or resistance with sufficient accuracy.

② For practical applications, a more precise description of the real R/T curve may be required. Either more complicated approaches (e.g. the Steinhart-Hart equation) are used or the resistance/temperature relation as given in tabulation form. The below table has been experimentally determined with utmost accuracy for temperature increments of 1 degree.

Actual values may also be influenced by inherent self-heating properties of NTCs. Please refer to MEAS-France Application Note HPC106 "Low power NTC measurement".

## HTG3500 Series - Relative Humidity and Temperature Module

### Steinhart-Hart coefficients

According to the equation below, the Steinhart-Hart coefficients for the operating temperature range for HTG3500 products thermistor are:

$$\frac{1}{T} = a + b * \ln(R) + C * \ln(R) * \ln(R) * \ln(R)$$

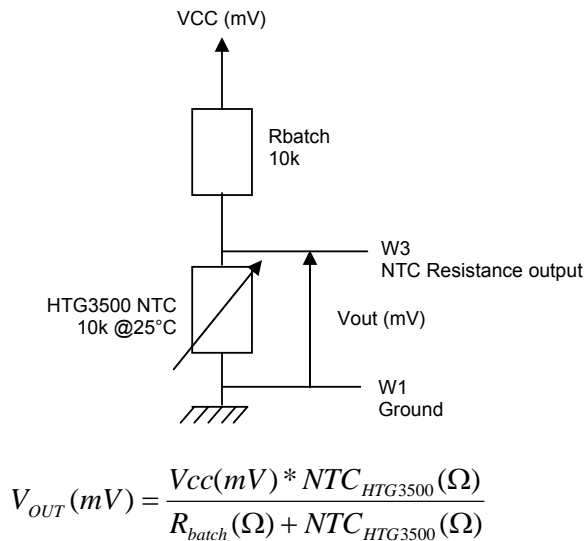

R	NTC resistance in $\Omega$ at temperature T in K
T	Temperature in K
a	Constant value (a= 8.61393E-04)
b	Constant value (b= 2.56377E-04)
c	Constant value (c= 1.68055E-07)

### Temperature Interface circuit

Concerning the temperature sensor of the HTG3500 Series products, the following measuring method described below is based on a voltage bridge divider circuit. It uses only one resistor component (Rbatch) at 1% to design HTM2500 temperature sensor interfacing circuit.

Rbatch is chosen to be equal to NTC @25°C to get:  $V_{out} = V_{cc}/2$  @25°C.

The proposal method connects Rbatch to Vcc (5Vdc) and NTC to Ground. It leads to a negative slope characteristic (Pull-Up Configuration).

Temperature (°C)	Resistance ( $\Omega$ )	Pull-Up Configuration Vout (mV)

Double coated adhesive tape could be used on potted area for housings 1 and 3 (ref: 3M – 5925F) to fix parts.

### RESISTANCE TO PHYSICAL AND CHEMICAL STRESSES

HTG3500 Series have passed through qualification processes of MEAS-France including vibration, shock, storage, high temperature and humidity, ESD.

HTG3500 Series contain circuits to protect its inputs and outputs against Electrostatic discharges (ESD) up to ±15kV, air discharge.

## HTG3500 Series - Relative Humidity and Temperature Module

HTG3500 Series are protected against EMC interferences.

HTG3500 Series are protected against reverse polarity.

Additional tests under harsh chemical conditions demonstrate good operation in presence of salt atmosphere, SO<sub>2</sub> (0.5%), H<sub>2</sub>S (0.5%), O<sub>3</sub>, NO<sub>x</sub>, NO, CO, CO<sub>2</sub>, Softener, Soap, Toluene, acids (H<sub>2</sub>SO<sub>4</sub>, HNO<sub>3</sub>, HCl), HMDS, Insecticide, Cigarette smoke, a non-exhaustive list.

HTG3500 Series are not light sensitive.
