

Storm 6000 Series Keypads

Numeric data entry in exposed public environments

- Rugged, reliable and responsive data entry
- Vandal resistant (20J BS EN 60068-2-75: 1997)
- Weather resistant (IP65)
- Large buttons for clarity and ease of use
- Permanent, high contrast, laser engraved keytop graphics
- Raised tactile symbols on coloured function keys
- Raised "home pip" on the "5" key
- 4 row x 4 column matrix circuit format
- Optional USB or PS2 encoded interface circuit (enclosed in water resistant pod)
- Optional PS2 or USB connection cable (supplied separately)
- Suitable for use by those with mobility or sensory impairment
- Overall dimensions: 124.0 mm x 118.5 mm x 17.5 mm (excluding interface pod on back face)

Storm Interface products include technology protected by international patents and design registration. All rights reserved.

Section 2. Product Overview

Key Features / Specifications

- *Rugged, reliable and responsive data entry*
- *Vandal Resistant (20J BS EN 60068-2-75: 1997)*
- *Weather Resistant (IP65)*
- *Large buttons for clarity and ease of use*
- *Permanent, high contrast, laser engraved keytop graphics*
- *Raised tactile symbols on coloured function keys*
- *Raised "home pip" on the "5" key*
- *4 Row x 4 Column matrix circuit format*
- *Optional USB or PS2 encoded interface circuit (enclosed in water resistant pod)*
- *Optional PS2 or USB connection cable (supplied separately)*
- *Optional RS232 plug in module (supplied separately)*
- *Suitable for use by those with mobility or sensory impairment*
- *Overall dimensions: 124.0 mm x 118.5 mm x 17.5 mm (excluding interface pod on back face)*
- *UL approved*

6000 Series keypad for public environments Application / Engineering Manual

The 6000 Series keypad range is designed to meet the requirements of existing and forthcoming Disability Access Requirements.

As international standards requirements are many and varied (although with some common themes for ATM Keypads), we have chosen the ADAAG requirements to illustrate compliance in the table below

	ADAAG Pt 707.4	6000 Series Keypad USA Layout
	Requirements for ATM Keypads	
Key Characteristics	<p>Key surfaces shall be raised above the surrounding surface by 1/25 inch (1 mm) minimum.</p> <p>The outer edge of key surfaces shall have a radius of 1/50 inch (0.5 mm) maximum.</p>	<p>Key surfaces are raised above the surrounding surface by 3mm</p> <p>Corner radii are 0.5mm</p>
Keypad Layout General	<p>707.4.4.1 Arrangement. Numeric keys shall be arranged in a 12-key telephone keypad layout with the number one key in the upper left hand corner.</p> <p>707.4.4.2 Marking. The number five key shall have a single raised dot.</p>	<p>Telephone Layout is used</p> <p>Number 5 key has a single raised feature.</p>
Key Separation	Any key surface shall be separated from other key surfaces by 1/8 inch (3.2 mm) minimum.	Minimum separation is 5mm
Separation from Function Keys	Function keys shall be separated from numeric keys by a distance that is not less than three times greater the distance between the numeric keys.	Separation to function keys is 15mm
Function Keys General	707.4.5.1 Arrangement. Function keys shall be arranged in the order of enter, clear, cancel, add value and decrease value horizontally from left to right or vertically from top to bottom. Where provided, add value and decrease value function keys shall be grouped with other function keys.	Order of function keys is Enter Clear Cancel
Function Keys Tactile Markings	707.4.5.2 Marking. Function keys shall be marked with tactile characters as follows: Enter or proceed key: raised circle; Clear or correct key: raised vertical line or bar; Cancel key: raised x; Add value key: raised plus sign; Decrease value key: raised minus sign.	Markings are Compliant (NB Add Value / Decrease Value not part of this layout)
Function Keys Colours	707.4.5.3 Colour Coding. Where function keys are colour coded, they shall be coloured as follows Cancel key: red; Clear or correct key: black; Enter or proceed key: green; Add value key: blue; Decrease value key: yellow.	All these colours are available. This layout has:- Cancel : Red Clear : Yellow Enter : Green (NB Canadian / European stds require Yellow for the Clear key, however layouts including Black key with raised Vertical bar is available to special order)

This document is provided for use and guidance of engineering personnel engaged in the installation or application of STORM data entry products manufactured by Keymat Technology Ltd. Please be advised that all information, data, and illustrations contained within this document remain the exclusive property of Keymat Technology Ltd. and are provided for the express and exclusive use as described above. Section 4. Connectors and Connections - Matrix Output

The 6000 Series matrix keypad is supplied without a cable so that the user can select the correct cable length. Switches provide a momentary contact between designated connector pins. Pins are to suit Molex KK Type 0.1" Pitch Headers. The Connector Details below shows the orientation and position of the connector.

If RS232 output is required then the Storm 420 Series Encoder may be purchased separately - this plugs in directly to the rear of the keypad.

KEYPAD FRONT VIEW

Please be advised that all information, data, and illustrations contained within this document remain the exclusive property of Keymat Technology Ltd. and are provided for the express and exclusive use as described above. This document is not supported by Keymat Technology's engineering change note, revision or reissue system. Data contained within this document is subject to periodic revision, reissue or withdrawal. Whilst every effort is made to ensure the information, data and illustrations are correct at the time of publication, Keymat Technology Ltd. are not responsible for any errors or omissions contained within this document.

Section 4. Connectors and Connections - PS2/USB Output

The 6000 Series encoded keypad is supplied without a cable so that the user can select the correct cable length and connector type to suit their application. Cables are offered as separately purchased options, or alternatively the user can source their own cable to suit the application. The pinout details for the connectors are shown on the following page.

Option 1 PS2 Minidin connector, straight cable, 2.5 metres long

Option 2 USB connector, straight cable, 2.5 metres long

Fitting Cables

WARNING : THE FOLLOWING MUST BE DONE IN AN ESSD SAFE HANDLING AREA

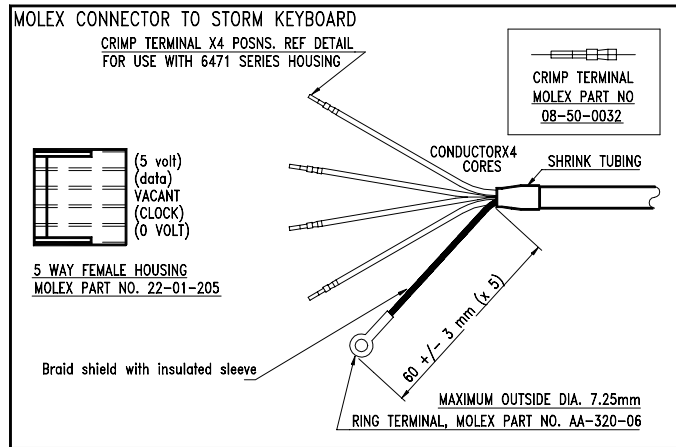

In order to fit the cable, the pod cover on the back of the keypad must be removed. Plug the molex connector into the connector designated JP1 on the encoder pcb. Connect the earth tag to the securing nut and tighten. Set the positions of the USB / PS2 selector switches (see table below). Note that SW2 toggles the function key output codes between USA layout and UK layout. Ensure the grommet is correctly located into the slot in the pod; this provides strain relief and sealing. Close the pod cover.

SWITCH SETTINGS	SW1	SW2	SW3
ON	USB	FUNCTION KEYS UK	USB
OFF	PS/2	FUNCTION KEYS USA	PS/2

This document is provided for use and guidance of engineering personnel engaged in the installation or application of STORM data entry products manufactured by Keymat Technology Ltd. Please be advised that all information, data, and illustrations contained within this document remain the exclusive property of Keymat Technology Ltd. and are provided for the express and exclusive use as described above. Whilst every effort is made to ensure the information, data and illustrations are correct at the time of publication, Keymat Technology Ltd. are not responsible for any errors or omissions contained within this document.

Section 4. Connectors and Connections -PS2/USB Cable

This document is provided for use and guidance of engineering personnel engaged in the installation or application of STORM data entry products manufactured by Keymat Technology Ltd. Please be advised that all information, data, and illustrations contained within this document remain the exclusive property of Keymat Technology Ltd. and are provided for the express and exclusive use as described above. This document is not supported by Keymat Technology's engineering change note, revision or reissue system. Data contained within this document is subject to periodic revision, reissue or withdrawal. Whilst every effort is made to ensure the information, data and illustrations are correct at the time of publication, Keymat Technology Ltd. are not responsible for any errors or omissions contained within this document.

Section 5. Fitting Encryption Device (PCB) to “Encryption Ready” Keypad

“Encryption Ready” Keypads are supplied with a separate kit comprising a pod housing (base and lid), fixings, and the elastomeric connector. The customer supplies the encryption device (pcb) and cable. Assembly stages are as follows :-

1. Fit pod base assembly over the studs and secure with 2-off M3 nyloc nuts - Torque setting 70Ncm then fit 4-off M3 x 10mm plastite screws - Torque setting: 70 Ncm.
2. Place Zebra Strip into pod base.

3. Fit (customer supplied) encoder assembly to pod base using the Jig to snap it into place. Take care not to bend the pcb retaining clips.
4. Fit (customer supplied) cable and test.
5. If specified, fit 4 off anti-tamper boot to the pod lid.
6. Clip pod lid onto the base.

This document is provided for use and guidance of engineering personnel engaged in the installation or application of STORM data entry products manufactured by Keymat Technology Ltd. Please be advised that all information, data, and illustrations contained within this document remain the exclusive property of Keymat Technology Ltd. and are provided for the express and exclusive use as described above. This document is not supported by Keymat Technology's engineering change note, revision or reissue system. Data contained within this document is subject to periodic revision, reissue or withdrawal. Whilst every effort is made to ensure the information, data and illustrations are correct at the time of publication, Keymat Technology Ltd. are not responsible for any errors or omissions contained within this document.

Section 5. Installation

The 6000 Series keypad is designed to be secured with 6 panel mount clips and locknuts. The gasket is to be positioned between keypad and fixing panel prior to installation. Ensure that a suitable panel material is used to support the keypad. This must provide sufficient rigidity where sealing is required. (e.g. 1.6mm to 2.0mm steel). To optimise sealing the under side of the panel should be flat, clean & free of debris .

1)) Prepare a panel with 2mm weld studs and the appropriate cutout (see below)

2) Fit the sealing gasket over the weld studs.

3) Offer up the keypad to the rear of the panel, and fit a mounting clip over each stud. Secure in place with locknuts. The torque applied to the locknuts should not exceed 25cN.m

This document is provided for use and guidance of engineering personnel engaged in the installation or application of STORM data entry products manufactured by Keymat Technology Ltd. Please be advised that all information, data, and illustrations contained within this document remain the exclusive property of Keymat Technology Ltd. and are provided for the express and exclusive use as described above.
