

Digital Fiber Amplifier

E3X-DA-N

Truly ultimate fiber amplifier in pursuit of "user friendliness" and "high performance"

* UL-listed including UL991 tests/evaluations Applicable standard: UL3121-1 Standards for additional tests/evaluations for applications: UL991, SEMI S2-0200

Features

Reducing power line wiring meaning space is saved. New design for easier maintenance.

Industry First Patent pending

The connector type that uses the wire-saving connector supplies power to the single-conductor slave connectors via the three-conductor master connector. Hence, the following three has been made possible.

1. Wiring is much simpler.
2. Relay connectors are not required meaning that space is used more efficiently and costs are reduced.
3. Simple inventory control because of no differentiation between master and slave in the amplifier section.

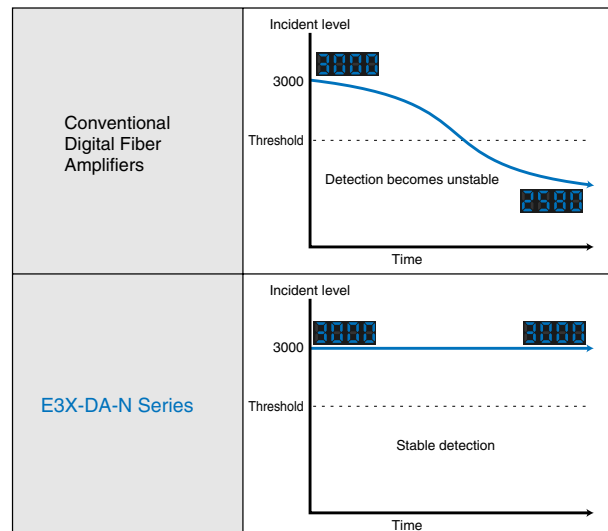

Super digital display by use of the Auto Power Control (APC) circuit

Industry First

The incident level of LEDs used in sensors is prone to deteriorate with time and as a result, detection becomes unstable.

Using the APC (auto power control) circuit for the first time as the fiber sensor, the E3X-DA-N series has no digital value variations, realizing severe detection.

This makes the E3X-DA-N ideal for applications where a high degree of sensitivity is required, such as detecting crystal glass.

Power consumption reduced by 70%.

Power consumption has been reduced up to about 70% from 1800 mW to 600 mW. (If the digital display is off)

The digital display can be changed to full-OFF or Dark-ON during RUN.

Eco mode

Power consumption can be reduced by setting the display to Full-OFF/Dark-ON in applications where the digital display is rarely looked at during RUN. (Can be set at the Mobile Console only)

Beeper-sized, new-generation Mobile Console unleashing the power of the ultimate fiber amplifier

Remote setting/adjustment function

Setting/teaching/fine adjustment can be made at the fiber front-end.

The Mobile Console has enabled setting and teaching at the fiber front-end, which could only be made at the amplifier. You can perform major adjustments while looking at the work position, etc.

Simultaneous turning possible using group teaching.

While teaching had to be performed for each Amplifier separately, it can now be performed for several Amplifiers at once using the Mobile Console.

Differences in incident light avoided by group zero-reset.

The incident levels of several amplifiers can be batch-reset to zero by the group zero-reset. This feature is useful for reducing differences between the amplifiers.

Incident level and threshold can be displayed simultaneously.

New Concept
Patent pending

Sensor head flashing during Amplifier operation
Alternatively, the amplifier channel can be displayed.

If the amplifier being operated is away from the sensor head, the sensor head can be flashed or the amplifier channel can be displayed.

Connection method		Connected via adapter
Weight (packed state)		Approx. 580 g (Console only: 120 g)

For details of the Mobile Console, refer to the instruction manual attached to the product.

Digital Fiber Amplifier

* Differential output digital fiber amplifier (E3X-DA11D/E3X-DA6D)

Applicable fiber unit characteristic

(Through-beam model)

E3X-DA-N

Sensitivity switching 11 steps can be set	Sensing distance (mm) (Values in parentheses: When using the E39-F1 lens unit)						Standard object (mm) *1 Minimum sensing object *2 (Opaque object) default
	HIGH			LOW			
	1	2	3-11	1	2	3-11	
Fiber type	Re- sponse time	270 or 570 s	0.5 or 1 ms	1 to 200 ms or 2 to 400 ms	270 or 570 s	0.5 or 1 ms	1 to 200 ms or 2 to 400 ms
E32-ET11R		240 (1680)	280 (1960)	370 (2590)	140(980)	180(1260)	240 (1680)
E32-ET21R		50	60	80	30	40	50
E32-T16WR		580	690	910	350	450	580
E32-T16PR		380	450	600	230	290	380

*1. The sensing object is operating.

*2. Value applied when the response time is set to 3-11. The value can be detected if the temperature varies within the operating ambient temperature. (Value when the sensing object is operating)

*3. The digital value is 1000 and the value can be detected in each detection area.

Refer to the E3X-DA-N for the note of the fiber unit.

(Reflective model)

Sensitivity switching 11 steps can be set	Sensing distance (mm)*1						Standard object (mm) *2 Minimum sensing object *3 (Opaque object) default
	HIGH			LOW			
	1	2	3-11	1	2	3-11	
Fiber type	Re- sponse time	270 or 570 s	0.5 or 1 ms	1 to 200 ms or 2 to 400 ms	270 or 570 s	0.5 or 1 ms	1 to 200 ms or 2 to 400 ms
E32-ED11R		80	90	120	45	60	80
E32-ED21R		13	15	20	7	10	13

*1. Sensing distance indicates values for white paper.

*2. The sensing object is operating.

*3. Value applied when the response time is set to 3-11. The value can be detected if the temperature varies within the operating ambient temperature. (Value when the sensing object is operating)

Note: Refer to E3X-DA-N for the note of the fiber unit.

Differences from E3X-DA-N amplifier unit

Item		Differential output type (edge detection type)	
		Prewiring type	amplifier units with Connectors
NPN output		E3X-DA11D	E3X-DA6D
Power consumption		Power consumption 960 mW max. (at power supply voltage 24 V, power consumption 40 mA max.)	
Control output	ON/OFF output	Load current 50 mA (residual voltage NPN/PNP: 1 V max. each) Open collector output type L.ON (ON at edge detection)/D.ON (OFF at edge detection) switch selectable	
Detection mode		One-side edge detection mode/both-side edge detection mode	
Response time		One-side edge detection mode: 270/500 s/1/2/4/10/20/30/50/100/200 ms selectable Both-side edge detection mode: 570 s/1/2/4/10/20/30/50/100/200/400 ms selectable	
Functions	Timer function	OFF delay timer for L.ON ON delay timer for D.ON 0 to 5 s (1 to 20 ms: 1 ms increments, 20 to 20 ms: 5 ms increments, 200 ms to 1 s: 100 ms, 1 to 5 s: 1 s increments)	
	APC	Yes	
	Zero reset	Yes (negative indication)	
	Initial reset	Yes (setting conditions initialized)	
	Sensitivity switching	Yes (HIGH/LOW)	
	Teaching level	One-point teaching level 1 to 50% variable (1% increments)	
Indicator lamp		Operation indicator (orange), 7-segment incident level display (red), 7-segment digital edge detection level display (red)	

For the outline drawings and other details, refer to the instruction manuals attached to the products.

Connection

Connection with linear sensor controller K3NX-VD2

- * Use this service power supply for the Sensor with reference to the power consumption of each Sensor.
- Note: 1. Various I/O Units are available for the K3NX. Select an appropriate output type depending on the application.
- 2. For details about the K3NX, refer to the K3NX Datasheet (N084) or the K3NX Operation Manual (N90).
- 3. This wiring is for the K3NX, with DC power supply specifications and the Monitor (Analog) Sensor with DC power supply specifications. Check respective power supply specifications before wiring them.

Nomenclature:

amplifier units

Standard, monitor-output, mark-detecting, infrared, and water-resistant models

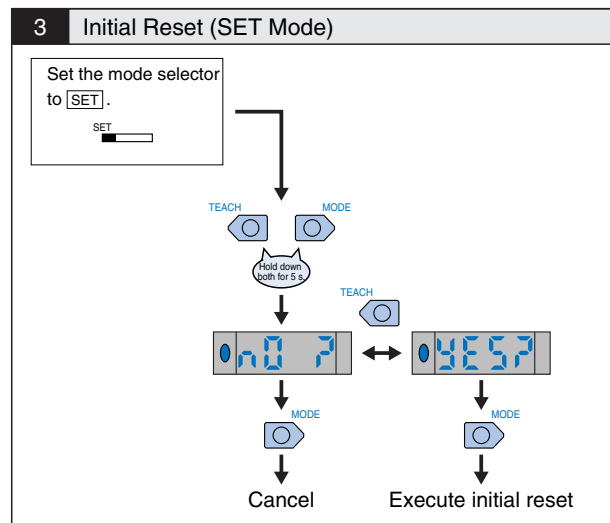

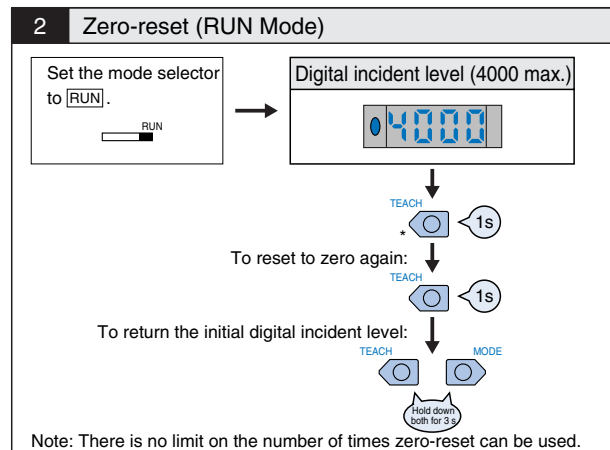

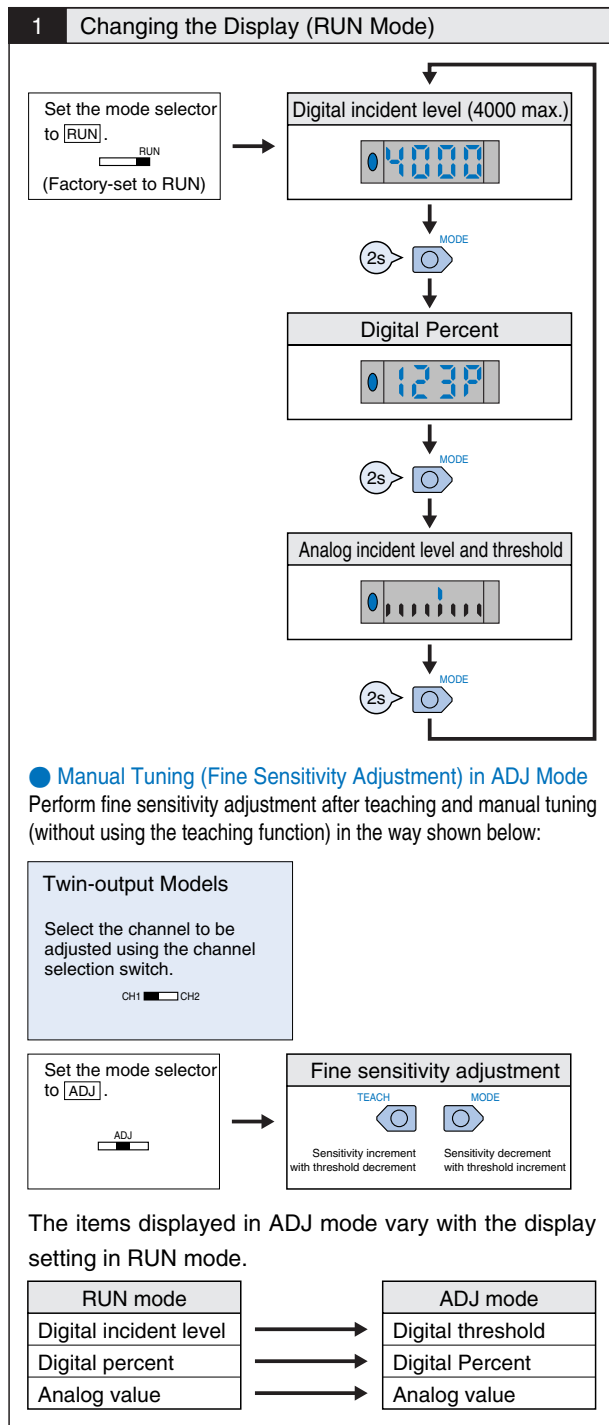

Twin-output models

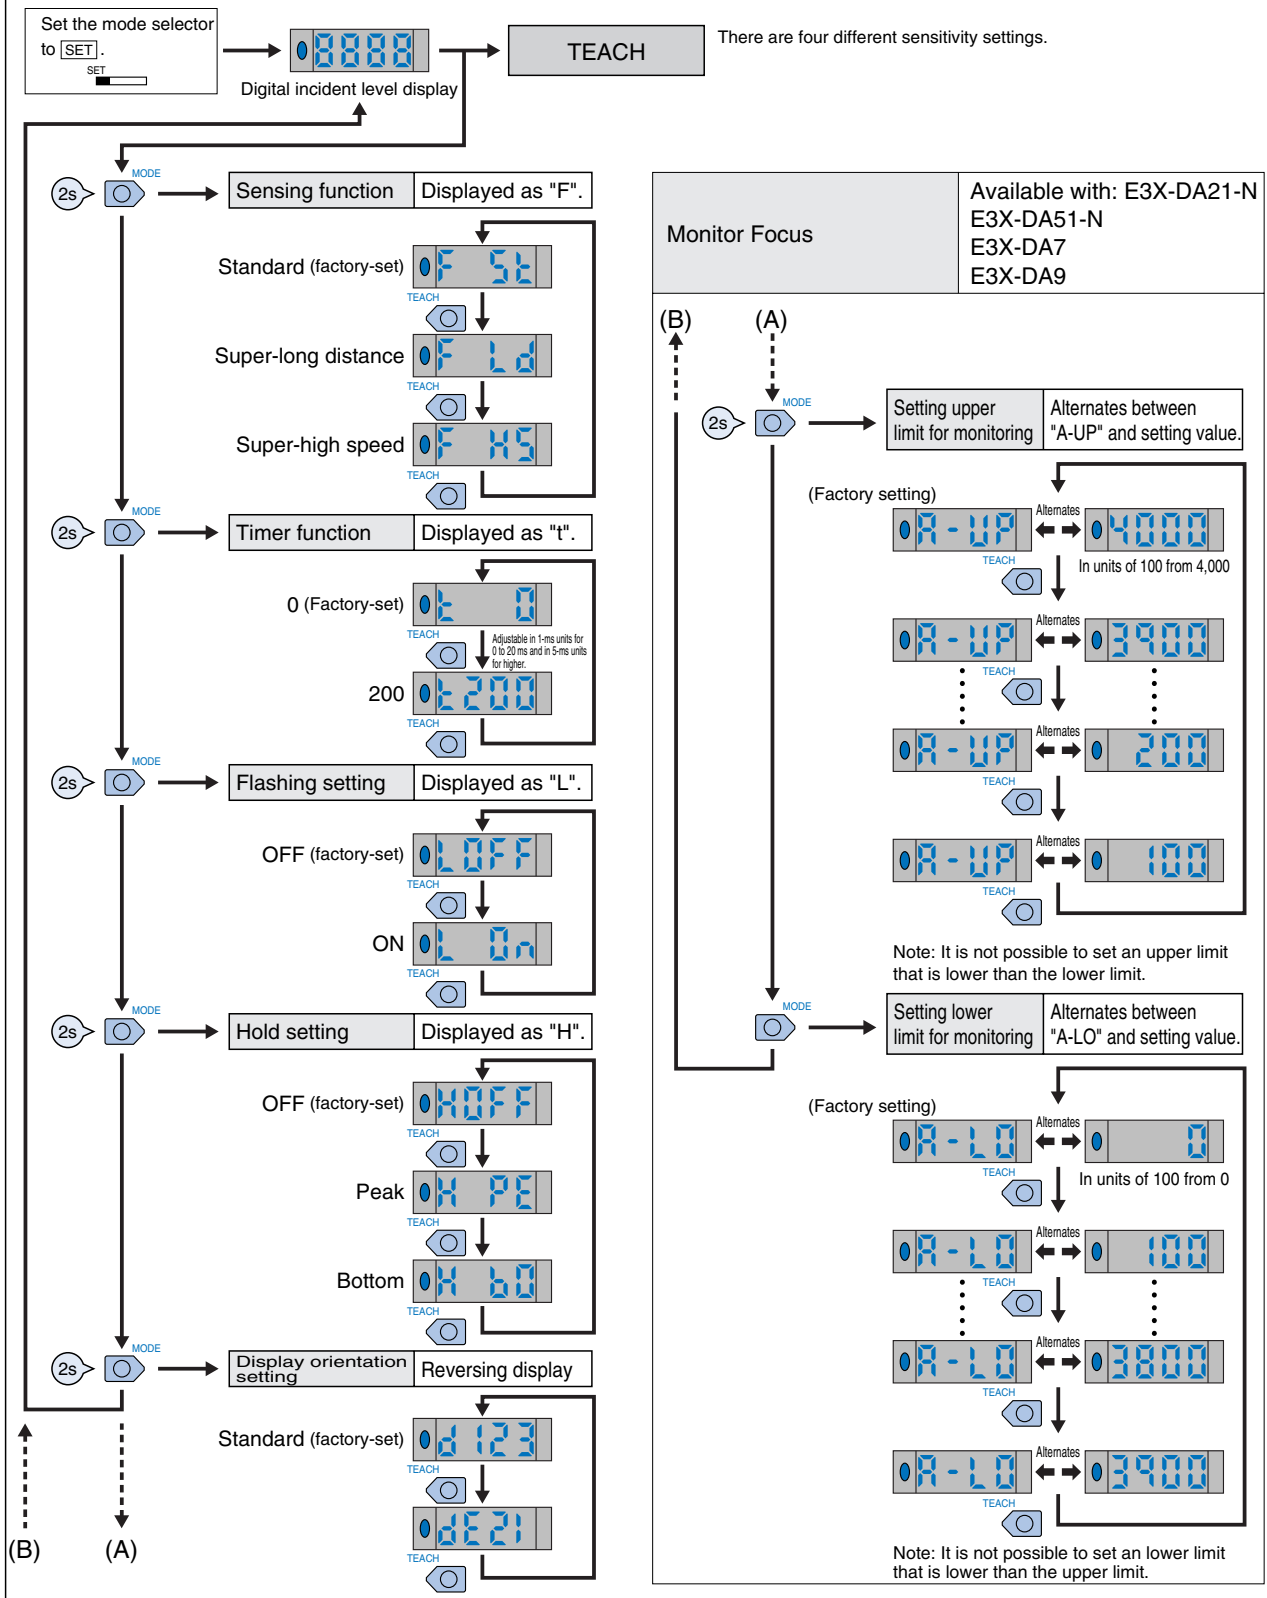

Operation

General

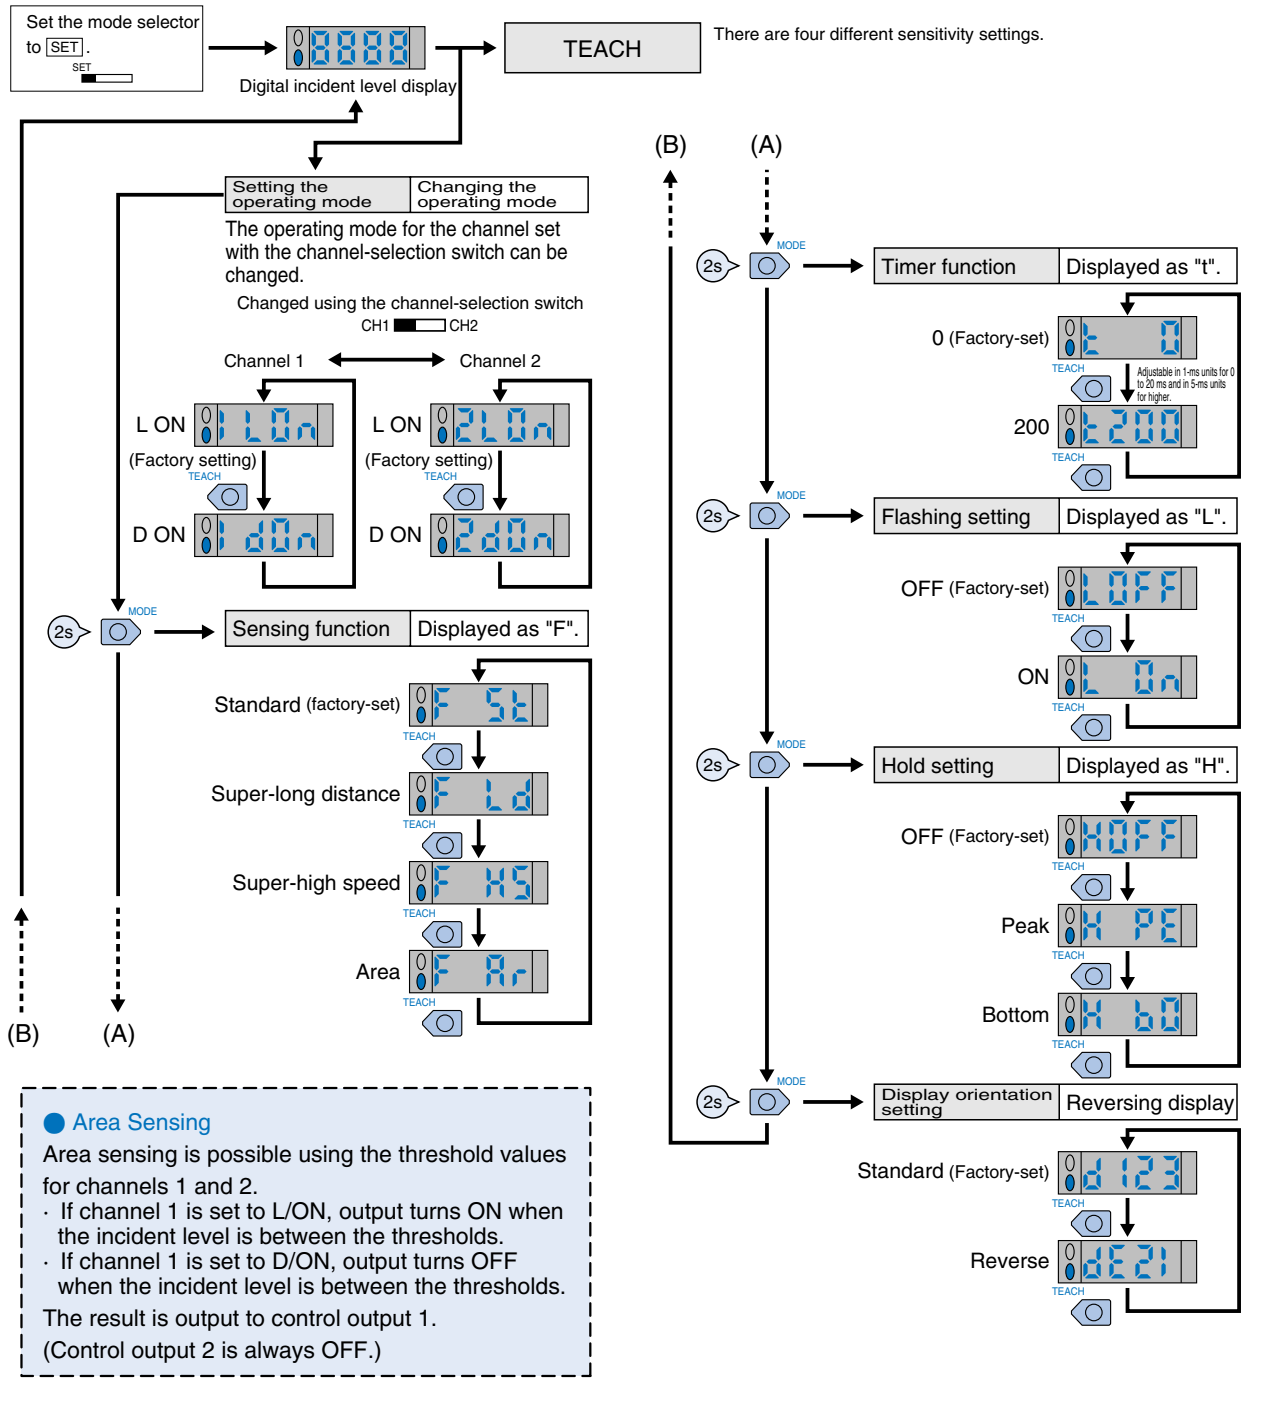

4 Setting Functions in SET Mode

Twin-output models

4 Setting Functions in SET Mode

General

When teaching is performed (SET mode)

- The four types of teaching given below are available.
- Once setting is made, operation is performed in the preset status thereafter. When a teaching error occurs, the level indicators flash in red. Restart setting from the beginning.

Twin-output models only  Select the channel to be adjusted using the channel selection switch. CH1 CH2

Set the mode selector to SET. 

Maximum Sensitivity Setting

Procedure	Operation
1	Set the mode selector to SET. 
2	Press the TEACH button for 3 seconds min. 
3	Setting is completed when the red-lit level indicators turn to green. Then they return to the digital incident level display. 
4	Set to RUN mode. 

One-point without-object teaching

Procedure	Operation
1	Set the mode selector to SET. 
2	Press the SET button once (about 1 s). 
3	Setting is completed when the red level indicators are turned ON. They then return to the digital incident level display. 
4	Set to RUN mode. 
5	The threshold is automatically set with the object. 

Note: If one-point teaching is not available because the difference in level is too fine, try two-point teaching.

Operation Mode Selector

Operating mode		Operation
Light ON	L ON	(Factory-set)
Dark ON	D ON	

There is no operation mode selector for twin-output models.

Two-point With/Without-object Teaching

Procedure	Operation
1	Set the mode selector to SET. 
2	With the work present, press the SET button once (about 1 s). 
3	The level indicators are lit red. 
4	If no work is pending, press the SET button once (about 1 s). 
5	Setting is completed when the green indicators are turned ON. Then they return to the digital incident level display. 
6	Set to RUN mode. 

Note: With and without work may be in any order.

Pin-point teaching (for positioning)

Procedure	Operation
1	Set the mode selector to SET. 
2	If no work is pending, press the SET button once (about 1 s). 
3	The level indicators are lit red. 
4	Place the object in the desired position, and press the TEACH button for 3 seconds min. 
5	Setting is completed when the green indicators are turned ON. Then they return to the digital incident level display. (Red indicators start flashing if setting is not OK.) 
6	Set to RUN mode. 

Precautions

Correct Use

Amplifier units

Design

Power ON

The sensor is ready to sense an object within 200 ms after turning the power ON. If the load and sensor are connected to different power supplies, always turn on the sensor power first.

Mounting

Connection/removing of amplifier units

(Connection)

1. Install the units one by one to the DIN rail.

2. Slide one unit toward the other, match the clips at the front ends, and then bring them together until they "click".

(Removing)

Slide one unit away from the other and remove them one by one. (Do not remove the connected units together from the DIN rail.)

Note: 1. When the amplifier units are connected to each other, the operable ambient temperature changes depending on the number of connected amplifier units. Check "Ratings/Performance".
 2. Before connecting or removing the units, always switch power off.

Adjustment

Mutual interference prevention function

The digital display value may vary due to the light from the other sensor. In that case, low the sensitivity (raise the threshold) to stabilize detection.

EEPROM Write Error

If a write error occurs (operation indicator starts flashing) due to power-off, static electricity or other noise in the teaching mode, perform teaching again.

Optical communication

When connecting the amplifier units, assemble them in close contact. During operation, do not slide or dismantle the amplifier units.

Hysteresis adjustment

The Mobile Console allows hysteresis adjustment, but note that the unit may not operate properly if the hysteresis setting is lower than the factory value.

Fitting of Mobile Console head

When fitting the Mobile Console head, a 20 mm or more clearance is needed on the left side.

Use of Mobile Console

For the twin output type (E3X-DA□□TW), up to 16 channels (eight E3X-DA□□TW units) can be set from the Mobile Console E3X-MC11. (Note that the operation mode and area detection cannot be set.)

Amplifier Unit Connectors

Installation

Connector installation

1. Insert the Master or Slave Connector into the amplifier unit until it clicks into place.

2. Link amplifier units to each other after the master and slave Connectors have been inserted.
3. Apply the supplied seal to the non-connecting surface of the master/slave connector.

Note: Apply seal to the grooved side.

Removing Connectors

1. Slide the slave amplifier unit (s) on which the connector must be removed from the rest of the group.
2. After the amplifier unit (s) has been separated, press down the lever on the connector and remove it. (Do not attempt to remove connectors without separating them from other amplifier units first.)

Mounting End Plate (PFP-M)

Depending on the installation, an amplifier unit may move during operation. In this case, use an end plate.

Before installing an end plate, remove the clip from the master amplifier unit using a nipper or similar tool.

The sensor bottom is also equipped with a clip removing mechanism.

1. Insert the clip to be removed into the slit underneath the clip on another amplifier unit.

2. Remove the clip by rotating the amplifier unit.

When fitting the Mobile Console, set the end plate in the guide as shown in the following figure.

Tensile stress for connectors (including cables)

Amplifier Unit Connectors

Master connector

E3X-CN11
E3X-CN21

* E3X-CN11: A 4-dia., 3-conductor, vinyl-insulated round cable (conductor cross-sectional area: 0.2 mm²; insulation diameter: 1.1 mm) is used.
E3X-CN21: A 4-dia., 4-conductor, vinyl-insulated round cable (conductor cross-sectional area: 0.2 mm²; insulation diameter: 1.1 mm) is used.

Slave connector

E3X-CN12
E3X-CN22

* E3X-CN12: A 2.6-dia., single-conductor, vinyl-insulated round cable (conductor cross-sectional area: 0.2 mm²; insulation diameter: 1.1 mm) is used.
E3X-CN22: A 4-dia., 2-conductor, vinyl-insulated round cable (conductor cross-sectional area: 0.2 mm²; insulation diameter: 1.1 mm) is used.

Read and Understand This Catalog

Please read and understand this catalog before purchasing the products. Please consult your OMRON representative if you have any questions or comments.

Warranty and Limitations of Liability

WARRANTY

OMRON's exclusive warranty is that the products are free from defects in materials and workmanship for a period of one year (or other period if specified) from date of sale by OMRON.

OMRON MAKES NO WARRANTY OR REPRESENTATION, EXPRESS OR IMPLIED, REGARDING NON-INFRINGEMENT, MERCHANTABILITY, OR FITNESS FOR PARTICULAR PURPOSE OF THE PRODUCTS. ANY BUYER OR USER ACKNOWLEDGES THAT THE BUYER OR USER ALONE HAS DETERMINED THAT THE PRODUCTS WILL SUITABLY MEET THE REQUIREMENTS OF THEIR INTENDED USE. OMRON DISCLAIMS ALL OTHER WARRANTIES, EXPRESS OR IMPLIED.

LIMITATIONS OF LIABILITY

OMRON SHALL NOT BE RESPONSIBLE FOR SPECIAL, INDIRECT, OR CONSEQUENTIAL DAMAGES, LOSS OF PROFITS, OR COMMERCIAL LOSS IN ANY WAY CONNECTED WITH THE PRODUCTS, WHETHER SUCH CLAIM IS BASED ON CONTRACT, WARRANTY, NEGLIGENCE, OR STRICT LIABILITY.

In no event shall responsibility of OMRON for any act exceed the individual price of the product on which liability is asserted.

IN NO EVENT SHALL OMRON BE RESPONSIBLE FOR WARRANTY, REPAIR, OR OTHER CLAIMS REGARDING THE PRODUCTS UNLESS OMRON'S ANALYSIS CONFIRMS THAT THE PRODUCTS WERE PROPERLY HANDLED, STORED, INSTALLED, AND MAINTAINED AND NOT SUBJECT TO CONTAMINATION, ABUSE, MISUSE, OR INAPPROPRIATE MODIFICATION OR REPAIR.

Application Considerations

SUITABILITY FOR USE

OMRON shall not be responsible for conformity with any standards, codes, or regulations that apply to the combination of products in the customer's application or use of the product.

At the customer's request, OMRON will provide applicable third party certification documents identifying ratings and limitations of use that apply to the products. This information by itself is not sufficient for a complete determination of the suitability of the products in combination with the end product, machine, system, or other application or use.

The following are some examples of applications for which particular attention must be given. This is not intended to be an exhaustive list of all possible uses of the products, nor is it intended to imply that the uses listed may be suitable for the products:

- Outdoor use, uses involving potential chemical contamination or electrical interference, or conditions or uses not described in this catalog.
- Nuclear energy control systems, combustion systems, railroad systems, aviation systems, medical equipment, amusement machines, vehicles, safety equipment, and installations subject to separate industry or government regulations.
- Systems, machines, and equipment that could present a risk to life or property.

Please know and observe all prohibitions of use applicable to the products.

NEVER USE THE PRODUCTS FOR AN APPLICATION INVOLVING SERIOUS RISK TO LIFE OR PROPERTY WITHOUT ENSURING THAT THE SYSTEM AS A WHOLE HAS BEEN DESIGNED TO ADDRESS THE RISKS, AND THAT THE OMRON PRODUCT IS PROPERLY RATED AND INSTALLED FOR THE INTENDED USE WITHIN THE OVERALL EQUIPMENT OR SYSTEM.

Disclaimers

CHANGE IN SPECIFICATIONS

Product specifications and accessories may be changed at any time based on improvements and other reasons.

It is our practice to change model numbers when published ratings or features are changed, or when significant construction changes are made. However, some specifications of the product may be changed without any notice. When in doubt, special model numbers may be assigned to fix or establish key specifications for your application on your request. Please consult with your OMRON representative at any time to confirm actual specifications of purchased product.

DIMENSIONS AND WEIGHTS

Dimensions and weights are nominal and are not to be used for manufacturing purposes, even when tolerances are shown.

ERRORS AND OMISSIONS

The information in this catalog has been carefully checked and is believed to be accurate; however, no responsibility is assumed for clerical, typographical, or proofreading errors, or omissions.

PERFORMANCE DATA

Performance data given in this catalog is provided as a guide for the user in determining suitability and does not constitute a warranty. It may represent the result of OMRON's test conditions, and the users must correlate it to actual application requirements. Actual performance is subject to the OMRON Warranty and Limitations of Liability.

PROGRAMMABLE PRODUCTS

OMRON shall not be responsible for the user's programming of a programmable product, or any consequence thereof.

COPYRIGHT AND COPY PERMISSION

This catalog shall not be copied for sales or promotions without permission.

This catalog is protected by copyright and is intended solely for use in conjunction with the product. Please notify us before copying or reproducing this catalog in any manner, for any other purpose. If copying or transmitting this catalog to another, please copy or transmit it in its entirety.
