

Mineral Insulated Thermocouples

The Mineral Insulated Thermocouples are fire resistant, resistant against high pressures and disruptions and have a long life time even in extreme conditions. With a bending radius of 5 x outer diameter of the Thermocouple they are very flexible. They are standardly insulated from the sheath. But they are also supplied with non insulation so that a quicker response time is provided.

Description	Accuracy	Temperature	Length	Dia-	Art.-No.
		Range [°C]	[mm]	meter [mm]	
Mineral insulated IEC 584 Thermocouples	Klasse 1	-200 ... +1100	150	1,0	K625 0150-10
				3,0	K625 0150-30
Type K with Miniature Plug Sheath Material
