## HS1E Series Full Size Interlock Switch with Locking Solenoid

## HS1E

Key features include:

- Basic unit and solenoid unit in one housing
- Plastic Housing: Light weight
- Ease of Wiring: All the terminal screws are M3.5.
- Available with a red or green indicator
- Choose from 4 circuit configurations
- When mounting the key on a movable door, and the switch on a machine body, the door can be mechanically locked when closed.
- Greater Safety: The door is unlocked by a solenoid lock-release signal from a PLC or other source after the machine has stopped.
- In the event of power failure or for machine maintenance, the door can be unlocked using a special tool.
- Flexible Installation: The key can be accessed from two directions.

- Also available is a manual unlock key type.

HS1E Series Functionality

Specifications

|  | Conforming to Standards |  | EN1088, IEC60947-5-1, EN60947-5-1(TUV), IIS014119, GS-ET-19 (BG), UL508, CSA C22. 2 No. 14 (c-UL) |  |  |  |  |  |

## Dimensions

HS1E with indicator - using the straight key (HS9Z-A1)

## HS1E with indicator - using the L-shaped key (HS9Z-A2)

## Accessories

## Straight Key (mainly for sliding doors)

## HS9Z-A1

## Adjustable Key

- The key angle is adjustable ( $0^{\circ}$ to $20^{\circ}$ ) for hinged doors.
- The minimum radius of the door opening can be as small as 100 mm .

For HS1/HS2 Series (HS9Z-A3)

## Accessories con't

## Key Angle Adjustment

- Using the screw (M3 hex socket head screw), the actuator angle can be adjusted (refer to the dimensional drawing). Adjustable angle: ( $0^{\circ}$ ) to $20^{\circ}$
- The larger the adjusted angle of the actuator, the smaller the applicable radius of the door opening.
- After installing the actuator, open the door. Then adjust the actuator so that its edge can be inserted properly into the entry slot of the safety switch.
- Recommended tightening torque: $0.8 \mathrm{~N}-\mathrm{m}$ (approx. $8.0 \mathrm{kgf-cm}$ )
- After adjusting the actuator angle, apply loctite or the like to the adjustment screw so as to prevent its loosening.

## Comparison between Adjustable and Non-adjustable Keys

Non-adjustable Key HS9Z-A1

Non-adjustable Key HS9Z-A2

## Interlock Switch Safety Precautions

- In order to avoid electric shock or a fire, turn the power off before installation, removal, wire connection, maintenance, or inspection of the switch.
- If relays are used in the circuit between the safety switch and the load, consider degrees of the danger and use safety relays, since welded or sticking contacts of standard relays may invalidate the functions of the safety switch.
- Do not place a PLC in the circuit between the safety switch and the load. The safety security can be endangered in the event of a malfunction of the PLC.
- Do not disassemble or modify the switch. It may cause a breakdown or an accident.

## Operation Precautions - for all series

- Regardless of door types, do not use the safety switch as a door stop. Install a mechanical door stop at the end of the door to protect the safety switch against excessive force.
- Do not apply an excessive shock to the switch when opening or closing the door.
- A shock to the door exceeding $1,000 \mathrm{~m} / \mathrm{sec}^{2}$ (approx. 100 G ) may cause the contacts of the switch to chatter, and a malfunction of the switch may occur.
- For connection of wires, unscrew the cover. Unnecessary loosening of other screws may cause a malfunction of the switch.
- Prevent foreign objects such as dust and liquids from entering the switch while connecting a conduit or wiring.
- If the operating atmosphere is contaminated, use a protective cover to prevent the entry of foreign objects into the switch through the actuator entry slots.
- Entry of a considerable amount of foreign objects into the switch may affect the mechanism of the switch and cause a breakdown.
- Do not store the switches in a dusty, humid, or organic-gas atmosphere.

## HS5B Precautions

## For Rotating Head Directions

- The head of the HS5B can be rotated in $90^{\circ}$ increments after removing the 4 screws on the corners of the head. Prevent entry of foreign objects into the switch during removal of the head. Tighten these screws with torque designated in the instruction sheet. Improper torque may cause errors.

## Minimum Radius of Hinged Doors

HS2B Precautions

## Wire Connection

- The HS2B has 3 conduit ports, which are closed as a part of the molded switch housing.
- Make an opening for wire connection by breaking one of the con-duit-port knockouts on the switch housing using a screwdriver.
- When breaking the conduit port, take care not to damage the contact block or other parts inside the switch.
- Cracks or burrs on the conduit entry may deteriorate the housing protection against water.
- When changing to another conduit port, close the unused opening with an optional plug (Type No. HS9Z-P1).

## HS1E Precautions

## Wire Connection

- Make an opening for wire connection by breaking one of the con-duit-port knockouts on the switch housing using a screwdriver.
- Before breaking the knockout, temporarily remove the connector-fixing lock nut from the switch.
- When breaking the knockout, take care not to damage the contact block or other parts inside the switch.
- Cracks or burrs on the conduit entry may deteriorate the housing protection.
- When changing to the other conduit port, close the unused opening with an optional plug (accessory).

Plug (For G1/2)
Type No. HS9Z-P1

## Manual Unlocking

- Remove the screw located on the unlocking entry at the side of the switch using the key wrench included with the switch. Then insert a small screwdriver into the switch to push the lever inside of the switch toward the indicator until the actuator is unlocked (refer to the diagram on the right).
- Insert a small screwdriver into the elliptical hole on the back of the switch, then push the lever inside of the switch toward the indicator until the key is unlocked (refer to the diagram on the right).

## HS1C Precautions

- Regardless of door type, do not use the safety switch as a locking device. Install a locking device independently, for example, using a metal latch (also applicable to Type HS1E).
- The safety switch cover can be only removed with the special key wrench supplied with the switch or with the optional screwdriver (applicable to HS1B and HS1E).
- Remove the screw located on the unlocking entry at the side of the switch using the key wrench included with the switch. Then insert a small screwdriver into the switch to push the lever inside of the switch toward the indicator until the actuator is unlocked (refer to the diagram on the right).

Caution: After the unlocking operation, put the screw back into the unlocking entry for safety.

1. This unlocking method is intended for an escape from a machine when a person is locked in. For access to the unlocking entry, an access hole should be opened on the mounting panel. When opening the hole, apply proper protection against water or other foreign objects.
2. Caution: After the unlocking operation, put the screw back into the unlocking entry for safety.

Operation Precautions

## Applicable Crimping Terminals

- (Refer to the Crimping Terminal 1 or 2 shown in the drawing below.)
- HS1C

Terminals No. 1 to 6: Use solid or stranded wires only (crimping terminals not applicable).
Terminals No. 7 and 8: Crimping Terminal 1
Ground Terminal: Crimping Terminal 2

- HS1B

Ground Terminal: Crimping Terminal 2
Other Terminals: Crimping Terminal 1
HS2B, HS5B, and HS1E
Crimping Terminal 1

Crimping Terminal 2

Use an insulation tube on the crimping terminal.

## Installation Examples (see the diagrams below)

Mounting on Hinged Doors

HS9Z-A1 Actuator

## Applicable Connectors (As shown below)

- Use connectors which maintain the IP67 protection.
- Applicable Connector Dimensions
- Flex Conduit: VF03 (Japan Flex) www.nipolex.co.jp
- Steel Connector (G1/2): ALC-103
(PF13.5): RBC-103PG13.5

## Recommended Screw Tightening Torque

- HS1C: $5.0 \pm 0.5 \mathrm{~N}-\mathrm{m}$ (approx. $50 \pm 5 \mathrm{kgf}-\mathrm{cm}$ ) (4 or 6 pcs of M5 hex socket head cap screws)
- HS1B: $5.0 \pm 0.5 \mathrm{~N}-\mathrm{m}$ (approx. $50 \pm 5 \mathrm{kgf-cm}$ ) (2 or 4 pcs. of M5 hex socket head cap screws)
- HS2B: $5.0 \pm 0.5 \mathrm{~N}-\mathrm{m}$ (approx. $50 \pm 5 \mathrm{kgf-cm}$ ) (2 pcs of M5 hex socket head cap screws)
- HS5B: $4.0 \pm 0.4 \mathrm{~N}-\mathrm{m}$ (approx. $40 \pm 4 \mathrm{kgf-cm}$ ) (2 pcs of M4 hex socket head cap screws)
- HS1E: $5.0 \pm 0.5 \mathrm{~N}$-m (approx. $50 \pm 5 \mathrm{kgf-cm}$ ) (4 or 6 pcs of M5 hex socket head cap screws)
- Key (HS9Z-A1/A2) $5.0 \pm 0.5 \mathrm{~N}-\mathrm{m}$ (approx. $50 \pm 5 \mathrm{kgf} \cdot \mathrm{cm}$ )
- (2 pcs. of M6 hex socket head cap screws) Key (HS9Z-A51/A52)
- $2.0 \pm 0.2 \mathrm{~N}-\mathrm{m}$ (approx. $20 \pm 2 \mathrm{kgf} \cdot \mathrm{cm}$ ) (2 pcs of M4 hex socket head cap screws)
- $1.0 \pm 0.2 \mathrm{~N}$-m (approx. $10 \pm 2 \mathrm{kgf} \cdot \mathrm{cm}$ ) (2 pcs of M4 Phillips screws)

The screws are supplied by the user.

## Applicable Wire Size

- HS1C: 0.5 to 0.75 mm 2 (Terminals No.1, 2, 5 to 8 ) 1.0 to 1.25 mm 2 (Terminals No.3, 4, and grounding terminal)
- HS5B: 0.5 to 1.25 mm 2
- HS1E: 0.5 to 1.25 mm 2
