# Digital Panel Meters Modular Indicator and Controller for pulse signals Type UDM60

- Dual 6-DGT µP-based controller with analogue indicators
- Dual rate, speed, frequency and period measurement
- Dual counter
- 0.001% RDG basic accuracy
- Range from 0.001Hz to 50kHz/20µs to 1000s
- Scalable inputs and counters
- Linearization of the inputs up to 16 points
- Special calculation functions
- NPN, PNP, NAMUR, TTL, Pick-up, free of voltage contacts and AC signal inputs
- Up to 4 independent alarm set-points (optional)
- 20mA/10VDC analog output (optional)
- Serial port RS485 or RS232 (optional)
- MODBUS, JBUS communication protocol
- Front protection degree: IP67, NEMA12
- Backlighted LCD display

#### **Product Description**

µp-based digital panel meter, dual 6-DGT LCD indicator with analogue indicators, for rate, speed, frequency and period measurements. Measuring ranges, scaling and functions easily programmable from the keypad or from the PC by means of optional UdmSoft software. UDM60 includes storage min-max functions and double level protection password. Housing for panel mounting with front protection degree: IP67, NEMA12.

#### How to order UdmSoft-kit

**UdmSoft-kit:** software plus communication cable for programming UDM60 by means of PC.

**UdmSoft:** software for programming UDM60 by means of PC, downloadable from www.carlogavazzi.com.

### **Type Selection**

Slot A	(measuring inputs)	Slot B	(communication)	Slot C	(communication and alarm)	Slot E	) (power supply)
TF1:	0.001Hz to 50kHz for DC signals: PNP, NPN, NAMUR, TTL, free of voltage, con- tacts, voltages up to 14VDC 0.001Hz to 50kHz for AC signals: pick-up, voltages up to 500VAC	XX: SX: SY: AV(*): (*):	None Serial port RS485 Serial port RS232 Single analogue out- put, 0 to 20mA DC and 0 to 10V DC The two analogue outputs cannot be used at the same time. It is possible to plug in only one mod- ule by instrument.	XX: R1: R2: R4: R5: AV(*):	None Single relay output, (AC1-8AAC, 250VAC) Dual relay output, (AC1-8AAC, 250VAC) Dual relay output, (AC1-8AAC, 250VAC) + dual open collector output (NPN, 100mA) 4 relay outputs (AC1- 5AAC, 250VAC) Single analogue out- put, 0 to 20mA DC and 0 to 10V DC	H: L: 3:	90 to 260V AC/DC 18 to 60V AC/DC (24 to 48V AC/DC ± 25% according to UL) 10 to 28V DC (12 to 24V DC ± 15% according to UL)
						Optio	ns

- XX: None
- TX: Tropicalization

#### Input specifications

Analogue inputs BQ TF1 module BQ TF2 module	Channels and variables 2, 0.001Hz to 50kHz for DC signals: PNP, NPN, NAMUR, TTL, free of volt- age contacts, voltages up to 14VDC. 2, 0.001Hz to 50kHz for AC	Contact reading signal Close contact resistance Open contact resistance Insulation	- counter(s) reset - latch and counter reset BQ TF1: <6 mA, <7 VDC BQ TF2: <0.25 mA, <3 VDC Max $1k\Omega$ . Min 100k $\Omega$ . Non-insulated.
ON signal minimum time duration Rotation speed detection	signals: pick-up, voltages up to 500VAC. 0.001Hz to 50kHz, 10μs. Max 1kHz, duty cycle 50%.	Accuracy (display, RS485)	See table "Measuring accuracy", temperature drifts and minimum/maxi- mum indications"

8

BO R1: 1 relay output

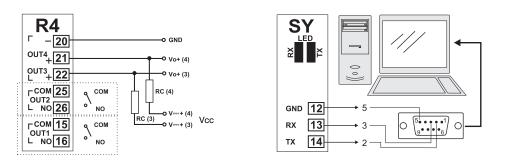

#### BO R2: 2 relay outputs

BO R5: 4 relay outputs

### Wiring diagrams of optional modules (cont.)

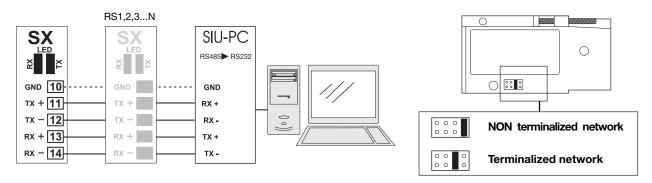

**BO SY:** RS232 direct connection to PC by means of COM port. RS232 has no terminalization.

**BO R4: dual relay output + dual open collector output:** the load resistances (Rc) must be designed so that the close contact current is lower than 100mA; the VDC voltage must be lower than or equal to 30VDC.

VDC: power supply output

Vo+: positive output (open collector transistor).

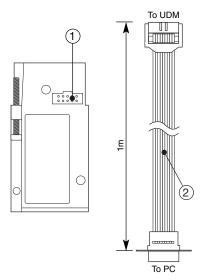

GND: ground (open collector transistor).

**BR SX: RS485 4-wire connection:** additional devices provided with RS485 port (indicated as RS1,2,3...N) are connected in parallel. The termination of the serial port is carried out only on the last instrument of the network. The serial module is provided with a jumper for the termination of the RS485 network as shown in the figure above.

**Note:** particular types of cables or plants may require an external termination. For the network connections use twisted cable type AWG26.

#### Programming UDM60 by means of PC

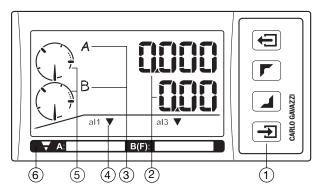

UDM60 is programmable by PC by means of the UdmSoft software (available on request). The user can program all parameters of UDM60 that will be subsequently uploaded and set in the instrument by the RS485 network (BR SX module) or by the RS232 connection (BR SY module). Should UDM60 be equipped without the RS485 or RS232 serial module, all programming parameters will be uploaded and set in the instrument by UdmSoft and the RS232 auxiliary serial connection (1) located on the side of the measuring input module using the special connection cable (2) available on request, as shown in the figures on the left. It is also possible to program the instrument using the dot connector (1) by means of the HyperTerminal Windows functions of a PC.

Note: the RS232 auxiliary port IS NOT insulated from the measuring inputs.

Specifications are subject to change without notice UDM60 DS ENG 261110

#### Front panel description

#### 1. Key-pad

The programming of the configuration parameters and the display may be easily controlled by means of the 4 function keys.

: to enter the programming phase and to confirm the password.

- to program values;
- to select functions;
- to scroll display pages.

E: for special functions.

#### 2. Display

Instantaneous measurements:

- 2 x 6 digit (max display 999999).
- Alphanumeric indications by means of LCD display for:
- display of configuration parameters;
- the measured variables.

#### 3. Variable type indicators

Display the type of the variables (A for channel A, B for channel B or F for function, min for valley value, max for peak value).

4. Alarm status indicators Display any alarm condition

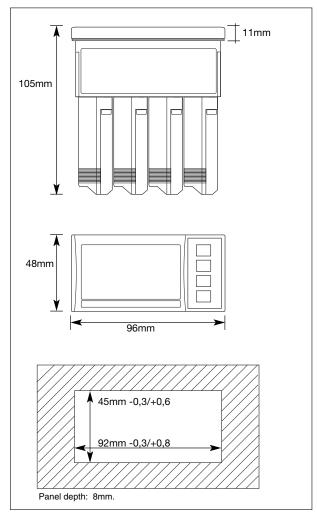

#### 5. Analogue indicators

Display graphically the amplitude of the variables with respect to their selected minimum and maximum limits; display overload or underload conditions; display of the rotation direction.

#### 6. Engineering unit

The instrument is supplied with a complete set of self-sticking labels with the main engineering units.
