Technical Data

Fluid: Compressed air

Maximum pressure:

Transparent bowl: 10 bar (145 psig)

Metal bowl: 17 bar (250 psig)

Operating temperature:*

Transparent bowl: -20° to +50°C (0° to +125°F)

Metal bowl: -20° to +80°C (0° to +175°F)

* Air supply must be dry enough to avoid ice formation at temperatures below +2°C (+35°F)

Particle removal: 5 µm or 40 µm filter element

Air quality: Within ISO 8573-1, Class 3 and Class 5 (particulates)

Typical flow at 6,3 bar (90 psig) inlet pressure at 0,3 bar (5 psig) pressure drop:

1/8" Ports, 5 µm element: 9 dm³/s (19 scfm)

1/4" Ports, 5 µm element: 11,5 dm³/s (24 scfm)

Nominal bowl size: 31 ml (1 oz)

Drain connection: 1/8" pipe

Automatic drain operation: Spitter type drain operates momentarily when a rapid change in air flow occurs or when the supply pressure is reduced.

Materials:

Body: Zinc

Bowl:

Transparent: Polycarbonate

Metal: Zinc

Element: Sintered polypropylene

Elastomers: Neoprene & nitrile

Warning

These products are intended for use in industrial compressed air systems only. Do not use these products where pressures and temperatures can exceed those listed under '**Technical Data**'.

Before using these products with fluids other than those specified, for non-industrial applications, life-support systems, or other applications not within published specifications, consult NORGREN.

Through misuse, age, or malfunction, components used in fluid power systems can fail in various modes. The system designer is warned to consider the failure modes of all component parts used in fluid power systems and to provide adequate safeguards to prevent personal injury or damage to equipment in the event of such failure.

System designers must provide a warning to end users in the system instructional manual if protection against a failure mode cannot be adequately provided.

System designers and end users are cautioned to review specific warnings found in instruction sheets packed and shipped with these products.

Water vapor will pass through these units and will condense into liquid if air temperature drops in the downstream system. Install an air dryer if water condensation could have a detrimental effect on the application.
