DATA SHEET

Form 442-100824

Description

The current output modules provide a single channel of opticallyisolated digital-to-current conversion. The "T" module is transformer isolated which eliminates any ground loop problems. Modules plug into any Standard Classic analog I/O rack and are secured by a captive screw.

ANALOG OUTPUT

page 1/4

| Part Numbers | Description | |
|-----------------|-------------------------|--|
| DA3 | 4-20 MA Output | |
| DA3T | 4-20 MA Output Isolated | |
| DA8 | 0-20 MA Output | |

Output Ranges by Module

| | DA3 | DA3T | DA8 |
|----------------------|--------------------------------------------------------|--------------------------------------------------------|--------------------------------------------------------|
| Output Current | 4–20 mA | 4–20 mA | 4–20 mA |
| Minimal Current Draw | 1.6 mA | 1.6 mA | 1.6 mA |
| Accuracy | 16 μΑ | 16 μΑ | 20 μΑ |
| Power Requirements | 20 mA at +15 VDC 10 mA at -15 VDC 24 mA at 5 VDC | 22 mA at +15 VDC 22 mA at -15 VDC 24 mA at 5 VDC | 20 mA at +15 VDC 10 mA at -15 VDC 24 mA at 5 VDC |

Specifications

Need table header

| Response Time | Full scale step change in 3 ms | |
|--------------------------------------------------------------|-----------------------------------|--|
| Resolution | 12 bits | |
| Isolation Input-to-Output Input-to-Analog Supply (T Modules) | 4,000 Vrms 4,000 Vrms | |
| Temperature Operating Storage | 0° C to 70° C - 25° C to 85° C | |

DA3T: All of the lower A terminals on the mounting rack are tied together. These provide a convenient tie point for shared loop source return. To use the DA3T with a common loop supply, connect any one lower A terminal to the shared loop source "-", then jumper upper A to lower A for each DA3T.

More About Opto 22

Products

Opto 22 develops and manufactures reliable, flexible, easy-to-use hardware and software products for industrial automation, remote monitoring, and data acquisition applications.

SNAP PAC System

Designed to simplify the typically complex process of understanding, selecting, buying, and applying an automation

system, the SNAP PAC System consists of four integrated components:

- SNAP PAC controllers
- PAC Project Software Suite
- SNAP PAC brains
- SNAP I/O[™]

SNAP PAC Controllers

Programmable automation controllers (PACs) are multifunctional, multidomain, modular controllers based on open standards and providing an integrated development environment.

Opto 22 has been manufacturing PACs for many years. The latest models include the standalone SNAP PAC S-series and the rack-mounted SNAP PAC R-series. Both handle a wide range of digital, analog, and serial functions and are equally suited to data collection, remote monitoring, process control, and discrete and hybrid manufacturing.

SNAP PACs are based on open Ethernet and Internet Protocol (IP) standards, so you can build or extend a system without the expense and limitations of proprietary networks and protocols.

PAC Project Software Suite

Opto 22's PAC Project Software Suite provides full-featured and cost-effective control programming, HMI (human machine interface) development and runtime, OPC server, and database connectivity software to power your SNAP PAC System.

These fully integrated software applications share a single tagname database, so the data points you configure in PAC ControlTM are immediately available for use in PAC DisplayTM, OptoOPCServerTM, and OptoDataLinkTM. Commands are in plain English; variables and I/O point names are fully descriptive.

PAC Project Basic offers control and HMI tools and is free for download on our website, www.opto22.com. PAC Project Professional, available for separate purchase, adds OptoOPCServer, OptoDataLink, options for Ethernet link redundancy or segmented networking, and support for legacy Opto 22 serial *mistic* M/O units.

SNAP PAC Brains

While SNAP PAC controllers provide central control and data distribution, SNAP PAC brains provide distributed intelligence for I/O processing and communications. Brains offer analog, digital, and serial functions, including thermocouple linearization; PID loop control; and optional high-speed digital counting (up to 20 kHz), quadrature counting, TPO, and pulse generation and measurement.

SNAPI/O

I/O provides the local connection to sensors and equipment.

Opto 22 SNAP I/O offers 1 to 32 points of reliable I/O per module,

depending on the type of module and your needs. Analog, digital, serial, and special-purpose modules are all mixed on the same mounting rack and controlled by the same processor (SNAP PAC brain or rack-mounted controller).

Quality

Founded in 1974 and with over 85 million devices sold,
Opto 22 has established a worldwide reputation for highquality products. All are made in the U.S.A. at our
manufacturing facility in Temecula, California. Because we
do no statistical testing and each part is tested twice before leaving
our factory, we can guarantee most solid-state relays and optically
isolated I/O modules for life.

Free Product Support

Opto 22's Product Support Group offers free, comprehensive technical support for Opto 22 products. Our staff of support engineers represents decades of training and experience. Product support is available in English and Spanish, by phone or email, Monday through Friday, 7 a.m. to 5 p.m. PST.

Free Customer Training

Hands-on training classes for the SNAP PAC System are offered at our headquarters in Temecula, California. Each student has his or her own learning station; classes are limited to nine students. Registration for the free training class is on a first-come, first-served basis. See our website, www.opto22.com, for more information or email training@opto22.com.

Purchasing Opto 22 Products

Opto 22 products are sold directly and through a worldwide network of distributors, partners, and system integrators. For more information, contact Opto 22 headquarters at 800-321-6786 or 951-695-3000, or visit our website at www.opto22.com.
