The information in this manual has been checked carefully and is believed to be accurate; however, Opto 22 assumes no responsibility for possible inaccuracies or omissions. Specifications are subject to change without notice.

Opto 22 warrants all of its products to be free from defects in material or workmanship for 30 months from the manufacturing date code. This warranty is limited to the original cost of the unit only and does not cover installation, labor, or any other contingent costs. Opto 22 I/O modules and solid-state relays with date codes of 1/96 or later are guaranteed for life. This lifetime warranty excludes reed relay, SNAP serial communication modules, SNAP PID modules, and modules that contain mechanical contacts or switches. Opto 22 does not warrant any product, components, or parts not manufactured by Opto 22; for these items, the warranty from the original manufacturer applies. These products include, but are not limited to, OptoTerminal-G70, OptoTerminal-G75, and Sony Ericsson GT-48; see the product data sheet for specific warranty information. Refer to Opto 22 form number 1042 for complete warranty information.

OPTO 22

Welcome to the G4 Digital I/O Family Data Book

Introduction

Generation 4 digital I/O, introduced by Opto 22 in 1989, provides increased density over older modules, while maintaining single-channel flexibility. LEDs and fuses are generally on the modules rather than the rack to make them visible and easy to service. The G4 digital I/O family includes a wide variety of modules, mounting racks, and accessories to meet the needs of your system.

What's In This Book

The G4 Digital I/O Family Data Book pulls together information on all Generation 4 digital I/O family products. This same information can also be found in individual product data sheets; it is brought together here for your convenience.

This book covers the following:

Chapter 2, "Generation 4 Digital I/O Mounting Racks"—Choose your mounting rack from the table on page 4, then see detailed drawings and specifications on the following pages.

Chapter 3, "Generation 4 Racks with Integral Digital I/O"—Detailed drawings and specifications for a special group of rack products with I/O circuitry permanently integrated.

Chapter 4, "Generation 4 Digital I/O Modules"—See the table on page 33 for an overview of all G4 modules. Detailed drawings and specifications follow.

Chapter 5, "Generation 4 Digital I/O Accessories"—Find details on G4 accessories, including an adapter card, cables and connectors, fuses, and a jumper strap.

Appendix A, "Designing Custom I/O Mounting Racks"—Includes helpful information for customers who are designing their own mounting systems for Generation 4 digital I/O modules.

Appendix B, "Wiring Diagrams"—Examples for mapping field wiring to mounting racks for each type of module that can be plugged into the rack.

For Help

If you have any questions about Generation 4 Digital I/O products, please contact Opto 22. Phone hours are Monday through Friday, 8 a.m. to 5 p.m. Pacific Time.

Phone: 800-TEK-OPTO (835-6786)

951-695-3080

(Hours are Monday through Friday, 7 a.m. to 5 p.m. Pacific Time)

Fax: 951-695-3017

Email: support@opto22.com

Opto 22 website: www.opto22.com

NOTE: Email messages and phone calls to Opto 22 Product Support are grouped together and answered in the order received.

When calling for technical support, be prepared to provide a complete description of your hardware and operating system to the Product Support engineer. This information should include:

- accessories installed
- type of power supply
- types of I/O modules and racks used
- third-party devices installed
- how the system is wired.

DPTO 22

Generation 4 Digital I/O Mounting Racks

Overview of Mounting Racks

This chapter includes information on mounting racks used with G4 digital I/O modules. For integral racks, which have permanent I/O circuitry built into the rack, see page 27.

Features

The following features apply to all mounting racks in this chapter:

- Minimum mounting space required
- Spare module fuse included
- UL recognized, CSA certified, and CE compliant
- Uses a single 5, 15, or 24 VDC power supply for control power
- You can insert and remove modules easily and guickly without disturbing field wiring.
- Modules are securely attached with a threaded captive hold-down screw.
- Operating temperature: 0° to 70° C
- Humidity: 95% relative humidity, non-condensing

Choose Your Rack

Choose a rack from the following table, and then see the referenced page in this chapter for detailed drawings and specifications.

| Model | Number of Channels | Input Modules | Output Modules | AC | DC | Built-in Fuse Tester | Field Connector | Control Connector | Special Features | See |
|-----------|-----------------------|------------------|-------------------|----|----|-------------------------|-----------------------------|-----------------------------|---|------------|
| G4PB4 | 4 | • | • | • | • | • | screw-type barrier strip | screw-type barrier strip | Good for compact locations where only a few I/O points are needed. | page 5 |
| G4PB4R | 4 | | • | • | • | | screw-type barrier strip | screw-type barrier strip | Channel-to-channel isolation between all field and control circuits. Outputs can be wired for either positive-true logic or standard negative-true logic. Cannot use dry contact output modules. | page 6 |
| G4PB8 | 8 | • | • | • | • | • | screw-type barrier strip | 50-pin header connector | G4AC5 compatible (See page 52.) | page 7 |
| G4PB8H | 8 | • | • | • | • | • | screw-type barrier strip | 50-pin header connector | For use with Optomux B1, Pamux B5, and mistic B100 brain boards. Works with Opto 22 PBSA/B/C power supply. Power indicator light. | page 8 |
| G4PB16 | 16 | • | • | • | • | • | screw-type barrier strip | 50-pin header connector | G4AC5 compatible (See page 52.) | page 10 |
| G4PB16H | 16 | • | • | • | • | • | screw-type barrier strip | 50-pin header connector | For use with Optomux B1, Pamux B5, and mistic B100 brain boards. Works with Opto 22 PBSA/B/C power supply. Power indicator light. | page 12 |
| G4PB16HC | 16 | • | • | • | • | • | screw-type barrier strip | 50-pin header connector | Extra row of terminals for field loop power connections. For use with Opto- mux B1, Pamux B5, and Mistic B100 brain boards. Works with Opto 22 PBSA/B/C power supply. Power indica- tor light. | page 14 |
| G4PB16I | 16 | • | • | • | • | | screw-type barrier strip | screw-type barrier strip | Channel-to-channel isolation between all field and control circuits. Outputs can be wired for either positive-true logic or standard negative-true logic; inputs can be wired for negative-true. | page 16 |
| G4PB16T | 16 | • | • | • | • | • | screw-type barrier strip | screw-type barrier strip | | page 19 |

| G4PB32DEC | 32 | • | • | • | • | • | screw-type barrier strip | 50-pin header connector | Interfaces to a DEC computer DRV-11J parallel card. | page 23 |

G4PB4 Mounting Rack

Description

The G4PB4 I/O mounting rack compactly accommodates up to four G4 digital I/O modules in applications where only a few I/O points are needed. Insert and remove modules easily and quickly without disturbing field wiring. Modules are secured to the mounting rack with a threaded captive hold-down screw.

Barrier strips with screw terminals provide the field, control, and mounting rack power connections.

Specifications

| Operating temperature | 0° to 70° C |
|---|---|
| Interface connector (field and control) | Screw-type barrier strip accommodates up to 10 AWG wire |

Dimensions

Connections

- 1. Even pins on control side are connected by etch to common.
- 2. +VCC and return are connected to control terminals 1 and 2.

G4PB4R Mounting Rack

Description

The G4PB4R output mounting rack compactly accommodates up to four G4 output modules and features channel-to-channel isolation between all field and control circuits. Positive-true and standard negative-true control signals from computer I/O ports may be connected to the racks.

Modules are inserted and removed easily and quickly without disturbing the field wiring. The threaded captive hold-down screw on each module securely attaches them to the rack. Barrier strips with screw terminals provide the field, control, and mounting rack power connections.

Specifications

| Operating temperature | 0° to 70° C |
|---|---|
| Interface connector (field and control) | Screw-type barrier strip accommodates up to 10 AWG wire |

Dimensions

Connections

NOTE: G40DC5R, G40DC5R5, G40AC5AMA, G40AC5MA, G40DC5MA
WILL NOT PLUG INTO THIS RACK.

G4PB8 Mounting Rack

Description

The G4PB8 I/O mounting rack accommodates up to eight G4 I/O modules. Insert and remove modules easily and quickly without disturbing field wiring. Modules are secured to the mounting rack with a threaded captive hold-down screw.

Barrier strips with screw terminals provide the field and mounting rack power connections. A header connector accepts a standard 50-pin cable for the logic connections (See page 51 for information about the G4AC5.)

Specifications

| Operating temperature | 0° to 70° C |
|--------------------------------------|---|
| Interface connectors Field: Control: | Screw-type barrier strip accommodates up to 10 AWG wire 50-pin header connector |

Dimensions

See the following page for connection information.

Connections—G4PB8

Notes:

- Even pins on control connector are connected by etch to common.
- +VCC and return connected to terminals marked LOGIC + and -.
- 3. At each module position on the field terminal strip, the lower number is always connected to pin 1 of the

| Module Position | Control (Header Connector) | Field (Terminal Strip) |

| 6 | 35 | 13 and 14 |
| 7 | 33 | 15 and 16 |

G4PB8H Mounting Rack

Description

The G4PB8H I/O mounting rack accommodates up to eight G4 I/O modules. A header connector accepts a standard 50-pin cable, the Optomux® B1, Pamux® B5, orB100 brain board for logic connections. Barrier strips with screw terminals provide the field and mounting rack power connections.

Insert and remove modules easily and quickly without disturbing field wiring. Modules are secured to the mounting rack with a threaded captive hold-down screw. The logic supply is fused with a 1A fuse

Specifications

| Operating temperature | 0° to 70° C |
|---|--|
| Interface connectors Field: Control: Power: | Screw-type barrier strip accommodates up to 10 AWG wire 50-pin header connector Two-position screw terminal or Opto 22 PBSA/B/C power supply |

Dimensions—G4PB8H

Connections—G4PB8H

- 1. Even pins on control connector are connected by etch to common.
- +VCC and return connected to terminals marked +5V and GND.
- At each module position on the field terminal strip, the lower number is always connected to pin 1 of the I/O module.
- 4. Use only 5 VDC logic modules when using the mounting rack with a brain board.

| Module Position | Control (Header Connector) | Field (Terminal Strip) |
|--------------------|----------------------------------|---------------------------|
| 0 | 47 | 1 and 2 |
| 1 | 45 | 3 and 4 |
| 2 | 43 | 5 and 6 |
| 3 | 41 | 7 and 8 |
| 4 | 39 | 9 and 10 |
| 5 | 37 | 11 and 12 |
| 6 | 35 | 13 and 14 |
| 7 | 33 | 15 and 16 |

G4PB16 Mounting Rack

Description

The G4PB16 I/O mounting rack accommodates up to 16 G4 I/O modules. Insert and remove modules easily and quickly without disturbing field wiring. Modules are secured to the mounting rack with a threaded captive hold-down screw.

Barrier strips with screw terminals provide the field and mounting rack power connections. A header connector accepts a standard 50-pin cable for the logic connections. (See page 51 for information on the G4AC5.)

Specifications

| Operating temperature | 0° to 70° C |
|--------------------------------------|---|
| Interface connectors Field: Control: | Screw-type barrier strip accommodates up to 10 AWG wire 50-pin header connector |

See the following page for dimensions and connection information.

Dimensions—G4PB16

Connections—G4PB16

- 1. Even pins on control connector are connected by etch to common.
- 2. +VCC and return connected to terminals marked LOGIC + and -.
- 3. At each module position on the field terminal strip, the lower number is always connected to pin 1 of the I/O module.

| Module Position | Control (Header Connector) | Field (Terminal Strip) |

G4PB16H Mounting Rack

Description

The G4PB16H I/O mounting rack accommodates up to 16 G4 I/O modules. A header connector accepts a standard 50-pin cable, the Optomux[®] B1, Pamux[®] B5, or Mistic[™] B100 brain board for logic connections. Barrier strips with screw terminals provide the field and mounting rack power connections.

Insert and remove modules easily and quickly without disturbing field wiring. Modules are secured to the mounting rack with a threaded captive hold-down screw. The logic supply is fused with a 1A fuse

Specifications

| Operating temperature | 0° to 70° C |
|---|--|
| Interface connectors Field: Control: Power: | Screw-type barrier strip accommodates up to 10 AWG wire 50-pin header connector Two-position screw terminal or Opto 22 PBSA/B/C power supply |

See the following page for dimensions and connection information.

Dimensions—G4PB16H

Connections—G4PB16H

- 1. Even pins on control connector are connected by etch to common.
- 2. +VCC and return connected to terminals marked +5V and GND.
- 3. At each module position on the field terminal strip, the lower number is always connected to pin 1 of the I/O module.
- PULLUP RESISTOR 4. Use only 5 VDC logic modules when using the mounting rack with a brain board.

G4PB16HC Mounting Rack

Description

The G4PB16HC I/O mounting rack accommodates up to 16 G4 I/O modules and features an extra row of terminals for field loop power connections. A header connector accepts a standard 50-pin cable, the Optomux® B1, Pamux® B5, or B100 brain board for logic connections. Barrier strips with screw terminals provide the field and mounting rack power connections.

Insert and remove modules easily and quickly without disturbing field wiring. Modules are secured to the mounting rack with a threaded captive hold-down screw. The logic supply is fused with a 1A fuse.

Specifications

| Operating temperature | 0° to 70° C |
|---|--|
| Interface connectors Field: Control: Power: | Screw-type barrier strip accommodates up to 10 AWG wire 50-pin header connector Two-position screw terminal or Opto 22 PBSA/B/C power supply |

See the following page for dimensions and connection information.

Dimensions—G4PB16HC

Connections—G4PB16HC

- 1. Even pins on control connector are connected by etch to common.
- 2. +VCC and return connected to terminals marked +5V and GND.
- 3. At each module position on the field terminal strip, the lower number is always connected to pin 1 of the I/O module.
- 4. Use only 5 VDC logic modules when using the mounting rack with a brain board.

G4PB16I Mounting Rack

Description

The G4PB16I I/O mounting rack accommodates up to 16 G4 I/O modules and features channel-to-channel isolation between all field and control circuits. Output modules may have their control side wired for either positive-true or standard negative-true control signals from computer I/O ports. Input modules operate only with negative true logic.

Insert and remove modules easily and quickly without disturbing field wiring. Modules are secured to the mounting rack with a captive hold-down screw. Barrier strips with screw terminals provide the field, control, and mounting rack power connections.

Specifications

| Operating temperature | 0° to 70° C |
|---|---|
| Interface connector (field and control) | Screw-type barrier strip accommodates up to 10 AWG wire |

See the following page for dimensions and connection information.

Dimensions—G4PB16I

Connections—G4PB16I

Notes:

- At each module position on the field terminal strip, the lower number is always connected to pin 1 of the module.
- Input modules and dry contact output modules (G4ODC5R and G4ODC5R5) require the power supply's ground to be connected to the control side's GND terminal. These modules also require that odd-numbered connections on the control side be connected to +VCC.
- 3. Input modules use even-numbered control terminals and can only be wired for negative-true logic.
- 4. To wire output modules for standard negative-true logic, connect the odd-numbered control terminals to VCC and use the even-numbered terminals for control.
- To wire output modules for positive-true logic, connect the even-numbered control terminals to logic ground and use the odd-numbered terminals for control.

See application examples on the following page.

| Module Position | Control (Header Connector) | Field (Terminal Strip) |
|--------------------|----------------------------------|---------------------------|
| 0 | 47 | 1 and 2 |
| 1 | 45 | 3 and 4 |
| 2 | 43 | 5 and 6 |
| 3 | 41 | 7 and 8 |
| 4 | 39 | 9 and 10 |

Application Examples—G4PB16I

For wiring G4 digital output modules (except dry contact modules):

Positive-True Logic Connection to PLC

^{*} This wiring can be done using a G4STRAP.

Negative-True Logic Connection to PLC

^{*} This wiring can be done using a G4STRAP.

G4PB16T Mounting Rack

Description

The G4PB16T I/O mounting rack accommodates up to 16 G4 I/O modules. Insert and remove modules easily and quickly without disturbing field wiring. Modules are secured to the mounting rack with a threaded captive hold-down screw.

Barrier strips with screw terminals provide the field, logic, and mounting rack power connections.

Modules on the G4PB16T can be wired for standard negative true logic only. (For positive true logic on outputs, see form #460, the G4PB16I data sheet.).

Specifications

| Operating temperature | 0° to 70° C |
|---|---|
| Interface connector (field and control) | Screw-type barrier strip accommodates up to 10 AWG wire |

Dimensions

See the following page for connection information.

Connections—G4PB16T

| Position | (Header Connector) | (Terminal Strip) |
|----------|-----------------------|------------------|
| 0 | 47 | 1 and 2 |
| 1 | 45 | 3 and 4 |
| 2 | 43 | 5 and 6 |
| 3 | 41 | 7 and 8 |
| 4 | 39 | 9 and 10 |
| 5 | 37 | 11 and 12 |
| 6 | 35 | 13 and 14 |
| 7 | 33 | 15 and 16 |

| 15 | 17 | 31 and 32 |

Field

Module Control

Notes:

- 1. +VCC and return are connected to control terminals marked + and -.
- 2. All odd-numbered terminals on the control terminal strip are connected by etch to the VCC return terminal marked -.
- 3. At each module position on the field terminal strip, the lower number is always connected to pin 1 of the I/O module.

G4PB24 Mounting Rack

Description

The G4PB24 I/O mounting rack accommodates up to 24 G4 I/O modules. Insert and remove modules easily and quickly without disturbing field wiring. Modules are secured to the mounting rack with a threaded captive hold-down screw.

Barrier strips with screw terminals provide the field and mounting rack power connections. A header connector accepts a standard 50-pin cable for the logic connections. The rack works with the G4AC5 computer interface. (See page 51.)

Specifications

| Operating temperature | 0° to 70° C |
|--------------------------------|--|
| Interface connectors Field: | Screw-type barrier strip accepts up to 10 AWG wire |
| Control: | 50-pin header connector |

Dimensions

See the following page for connection information.

Connections—G4PB24

- 1. Even pins on control connector are connected by etch to common.
- 2. +VCC and return connected to terminals marked LOGIC + and -.
- 3. At each module position on the field terminal strip, the lower number is always connected to pin 1 of the I/O module.

G4PB32DEC Mounting Rack

Description

The G4PB32DEC I/O mounting rack accommodates up to 32 G4 digital I/O modules and is used to interface to a DEC computer DRV-11J parallel card.

A header connector on the rack is used for logic connections by using a standard 50-conductor, flat ribbon cable. Barrier strips with screw terminals provide the field and mounting rack power connections.

Insert and remove modules easily and quickly without disturbing field wiring. Modules are secured to the mounting rack with a threaded captive hold-down screw.

Specifications

| Operating temperature | 0° to 70° C |
|---|--|
| Interface connectors Field: Control: Power: | Screw-type barrier strip accommodates up to 10 AWG wire 50-pin header connector Two-position screw terminal for a VCC power supply |

See the following pages for dimensions and connection information.

Dimensions

Connections—G4PB32DEC

- 1. Pins 17, 19, 21, 22, 23, 25, 26, 28, 30, 31, 32, and 34 on the control connector are etch-connected to the terminal.
- 2. +VCC and the return are connected to terminals marked + and -.
- 3. At each module position on the field terminal strip, the lower number is always connected to pin 1 of the I/O module.
- 4. The +VCC connection requires +5 VDC.

Generation 4 Racks with Integral Digital I/O

Overview of Racks with Integral I/O

This chapter includes information on racks that have permanent I/O circuitry built in. For mounting racks that are used with separate I/O modules, see page 3.

Features

The following features apply to all racks with integral I/O:

- Minimum mounting space required
- UL recognized, CSA certified, and CE compliant
- Uses a single 5 VDC power supply for control power
- Screw-type barrier strip for field connections; 50-pin header connector for control connections
- Operating temperature: -30° to 70° C. Humidity: 95%, non-condensing
- Can be modified for use with the G4AC5 adapter card. See page 52 for more information.

Choose Your Rack

Choose a rack from the following table, then see the referenced page for detailed drawings and specifications.

| Model | Number of Channels | Input Modules | Output Modules | AC | DC | Built-in Fuse Tester | Special Features | See |
|---------|-----------------------|------------------|-------------------|----|----|-------------------------|--|------------|
| G4PB16J | 16 | • | | | • | n/a | Optically isolated 4–16 VDC input channels built in. Use with Optomux B1, Pamux B5, and mastic B100 brain boards. LED indicator for each channel. Logic supply is fused. | page 28 |
| G4PB16K | 16 | • | | | • | n/a | Optically isolated 16–28 VDC input channels built in. Use with Optomux B1, Pamux B5, and mistic B100 brain boards. LED indicator and fuse for each channel. Logic supply is fused. | |
| G4PB16L | 16 | | • | | • | • | Optically isolated 5–60 VDC output channels built in. Use with Optomux B1, Pamux B5, and mastic B100 brain boards. LED indicators for each channel. | page 30 |

G4PB16J and K Racks with Integral Inputs

Description

The G4PB16J and G4PB16K DC input racks provide 16 channels of optically-isolated inputs for sensing on/off DC voltage levels by a B1, B5, or B100 brain board, or any ISA bus-compatible computer with an Opto 22 G4AC5 adapter card. Their compact size and design yields a substantial space and cost savings over other 16-channel I/O boards.

All input channels are identical on each board and are ideal for applications that need to monitor several4-16 VDC signals (model G4PB16J) or 16-28 VDC signal (model G4PB16K). On-board LED indicators display each channel's on/off status.

Typical applications for the integrated DC input racks include sensing the presence or absence of voltage from sources such as BCD devices, TTL level devices, thumbwheel switches, and barcode readers.

Control connections are easily made to a 50-pin header connector. Barrier strips with screw terminals provide the field and rack power connections. The logic supply is fused with a 1A fuse. These racks can be used with the G4AC5 computer interface if jumpers 1 and 2 are removed. (The figure above right shows the location of these two jumpers. See page 51 for more information.)

Specifications

| | Units | G4PB16J | G4PB16K |
|---|---------------------------|--------------------------|--------------------------|
| Input line voltage | VDC | 4–16 | 16–28 |
| Input current: @ Minimum voltage range @ Maximum voltage range | mA @ VDC mA @ VDC | 3.3, 4 16, 16 | 3.4, 16 6.3, 28 |
| Isolation: Input-to-output (transient) Channel-to-channel | volts Continuous volts | 4,000 300 | 4,000 300 |
| Input-to-output capacitance | pF/channel | 8 | 8 |
| Turn-on time | ms | 2.5 | 3 |
| Turn-off time | ms | 3.5 | 4.5 |
| Logic supply voltage | VDC | 4.5–6 | 4.5–6 |
| Logic supply current | mA @ VDC | 190, 5 | 190, 5 |
| Temperature: Operating Storage | ° C ° C | -30 to +70 -30 to +85 | -30 to +70 -30 to +85 |

Dimensions-G4PB16J and K

Connections-G4PB16J and K

G4PB16L Rack with Integral Outputs

Description

The G4PB16L DC output rack provides 16 channels of optically-isolated outputs for controlling or switching small DC loads by aB1, B5, or B100 brain board, or any ISA bus-compatible computer with an Opto 22 G4AC5 adapter card. Their compact size and design yields a substantial space and cost savings over other 16-channel I/O boards.

All channels are identical on each board and output 5-60 VDC. They are ideal for applications that need to control or switch several similar small DC loads. On-board LED indicators display each channel's on/off status.

Typical applications for the integrated DC output rack include controlling or switching low-power DC relays, low-power DC solenoids, and DC lamps and indicators.

Control connections are easily made to a 50-pin header connector. Barrier strips with screw terminals provide the field and rack power connections. The logic supply and all output channels are individually fused with a 1A fuse. This rack can be used with the G4AC5 computer interface if jumpers 1 and 2 are removed. (The figure above right shows the location of these two jumpers. See page 51 for more information.)

Specifications and Dimensions

| Output voltage range | 5-60 VDC |
|--|----------------------------------|
| Current rating: | |
| @ 45° C | 0.5 A |
| @ 70° C | 0.2 A |
| Isolation: | |
| Input-to-output (transient) | 4,000 volts |
| Channel-to-channel | 300 volts |
| Off-state leakage at maximum voltage | 1 mA |
| One-second surge | 1.3 A |
| Turn-on time | 100 μ sec |
| Turn-off time | 100 μ sec |
| Output voltage drop maximum peak | 1.6 VDC |
| Nominal logic voltage | 5 VDC |
| Logic voltage range | 4.5–6 VDC |
| Logic input current at nominal logic voltage | 190 mA |
| Temperature: | 0 0 |
| Operating | -30° to +70° C |
| Storage | -30° to $+85^{\circ}$ C |

Connections-G4PB16L

*Note: Commutation diode must be used on inductive loads. Typically, use diode 1N4005

OPTO 22

Generation 4 Digital I/O Modules

Overview of All Modules

Features

The following features apply to all modules:

- Small footprint design, reducing mounting space by approximately 50 percent
- UL recognized, CSA certified, and CE compliant
- Passed NEMA Showering Arc Test (ICS 2-230)
- Meet IEEE Surge Withstand Specification (IEEE-472)
- Operating temperature: 30° to 70° C.

Choose Your Module

Choose a module from the following table, then see the referenced page for detailed drawings and specifications.

Digital DC Input Modules

Description

Opto 22's G4 DC input modules are used to detect on/off DC voltage levels. Each module provides up to 4,000 V of optical isolation between field inputs and the logic output of the circuit.

All DC input modules except the G4IDC5K and the G4IDC5D are designed with filtering on the input and a hysteresis amplifier, providing high noise rejection and transient-free, "clean" switching. The G4IDC5K is a fast-switching module used to detect signals produced by photoelectric switches and TTL devices. The low-cost G4IDC5D is used for data acquisition. The G4IDC5MA is a special module featuring a manual-on/manual-off/automatic switch, ideal for diagnostic testing of control applications.

Typical applications for DC input modules include sensing the presence or absence of voltage with devices such as proximity switches, limit switches, selector switches, push buttons, photoelectric switches, and TTL-compatible devices. All modules include a built-in LED status indicator.

Digital AC Input Modules

Description

Opto 22's G4 AC input modules are used to detect on/off AC voltage levels. Each module provides up to 4,000 volts of optical isolation between field inputs and the logic output of the circuit.

All AC input modules are designed with filtering on the input and a hysteresis amplifier, providing high noise rejection and transient-free "clean" switching. The G4IAC5MA is a special module featuring a manual-on/manual-off/automatic switch, ideal for diagnostic testing of control applications.

Typical applications for AC input modules include sensing the presence or absence of voltage with devices such as proximity switches, limit switches, float switches, selector switches, push buttons, toggle switches, and thermostats. All modules include a built-in LED status indicator.

Digital Input Test Module

Description

Opto 22's G4SWIN input test module is used to simulate an input on an I/O mounting rack. Each module contains a toggle switch that closes a contact on the logic side. An internal resistor limits the current through the switch and provides a load similar to that of an actual input module. An internal debounce circuit allows rapid switch closures without false counts.

The G4SWIN module works with logic voltages of 5, 15, and 24 volts. Internally, there is no connection to the field inputs. A built-in LED indicates the simulated on/off status.

This module is ideal for simulating discrete external events when testing application software.

Specifications—Digital Input Test Module

| Temperature: Operating Storage | -30 to +70 °C -30 to +85 °C |

Dimensions and Schematics—Digital Input Test Module

Digital DC Output Modules

Description

Opto 22's G4 DC output modules are used to control or switch DC loads. Each module provides up to 4,000 volts of optical isolation between field devices and control logic.

The G4ODC5MA is a special module featuring a manual-on/manual-off/automatic switch, ideal for diagnostic testing of control applications.

Typical applications for DC output modules include switching loads such as DC relays, solenoids, motor starters, lamps, and indicators. All modules include a built-in LED status indicator.

** Control line is compatible with totem pole or tri-state output device.

Digital AC Output Modules

Description

Opto 22's G4 AC output modules are used to control or switch AC loads. Each module provides up to 4,000 volts of optical isolation between field outputs and the control side of the circuit, and each features zero voltage turn-on and zero current turn-off. All AC output modules are equivalent to single-pole, single-throw, normally open contacts (Form A, SPST-NO) except the G4OAC5A5, which is equivalent to a single-pole, single-throw, normally closed contact (Form B, SPST-NC).

The G4OAC5MA and the G4OAC5AMA are special modules featuring a manual-on/manual-off/automatic switch, ideal for diagnostic testing of control applications.

Typical applications for AC output modules include switching loads such as AC relays, solenoids, motor starters, heaters, lamps, and indicators. All digital AC output modules include a built-in LED status indicator.

^{**} One-half cycle maximum. Module turns off at the zero current crossing of the AC sine wave.

**Control line is compatible with totem pole or tri-state output device.

Dry Contact Output Modules

Description

Opto 22's G4 family of modules includes two dry-contact, low contact-resistance DC output modules: the G4ODC5R and the G4ODC5R5.

The G4ODC5R is a single-pole, single-throw, normally *open* mechanical relay (Form A, SPST-NO). The G4ODC5R5 is a single-pole, single-throw, normally *closed* mechanical relay (Form B, SPST-NC).

Typical applications for these dry-contact modules include analog signal and communication line multiplexing.

^{**} Control line is compatible with totem pole or tri-state output device.

Specifications—Dry Contact Output Modules

| | Units | G4ODC5R G4ODC5RFM ^{1,2} | G4ODC5R5 G4ODC5R5FM ^{1,2} |
|---|--------------|-------------------------------------|---------------------------------------|
| Contact form | | Form A SPST mechanical relay | Form B SPST mechanical relay |
| Normal position | | Open | Closed |
| Contact rating | VA | 10 | 10 |
| Maximum switching voltage | VDC VAC | 100 130 | 100 130 |
| Maximum switching current | Α | 0.5 | 0.5 |
| Maximum carry current | Α | 1.5 | 1.5 |
| Contact resistance | Megohms | 200 | 200 |
| Turn-on time | microseconds | 500 | 500 |
| Turn-off time | microseconds | 500 | 500 |
| Contact bounce | microseconds | 250 | 250 |
| Mechanical life | cycles | 5x106 | 5x106 |
| Logic voltage range | VDC | 4.8–6 | 4.8–6 |
| Logic pickup voltage ¹ | VDC | 0.8 | 0.8 |
| Logic dropout voltage ¹ | VDC | 3.8 | 3.8 |
| Logic input current at nominal logic voltage | milliamps | 14 | 14 |
| Isolation voltage (transient) input-to-output | VDC | 1,500 | 1,500 |
| Ambient temperature: Operating Storage | သိ သိ | 0 to 70 -60 to +105 | 0 to 70 -60 to +105 |

NOTE: The power rating of the dry contact module must not exceed 10 VA under steady-state or momentary in-rush conditions.

For voltages at or below 20 volts, the current limit is 0.5 amps. For voltages above 20 volts, the maximum allowable current is determined by the following equation:

See next page for additional information.

¹Pickup and dropout voltages are measured from 5 VDC logic ground.

²Part numbers ending in FM are Factory Mutual approved.

Specifications—Dry Contact Output Modules (continued)

Current Limit at Key Voltages:

| V | mA |
|------------------|-----|
| 5 | 500 |
| 12 | 500 |
| 24 | 416 |
| 100 ¹ | 100 |
| 120 | 83 |
| 130 ² | 76 |

¹ Maximum DC voltage is 100 VDC.

Dimensions and Schematics—Dry Contact Output Modules

Note: Also compatible with Totem Pole or Tri-State Output. Will not plug into G4PB4R mounting rack.

² Maximum AC voltage is 130 VAC.

 $^{^{\}star}$ Normally open for G4ODC5R, normally closed for G4ODC5R5.

Digital Output Test Module

Description

Opto 22's G4SWOUT output test module is used to simulate a G4 output on an I/O mounting rack. Each module contains a manual toggle switch on the field side. The switch closes a contact that shorts the field terminals to turn on a field output. Internally, there is no connection to the logic side of the module.

The G4SWOUT module is ideal for testing field wiring and devices by simulating an output from the computer. The switch handles 3 amps at 250 VAC/VDC.

Specifications—Output Test Module

| Output voltage range | 250 VAC/VDC |
|--|--------------------------------|
| Isolation, input-to-output (transient) | 4000 volts |
| Temperature: Operating Storage | -30 to +70 °C -30 to +85 °C |

Dimensions and Schematics—Output Test Module

OPTO 22

Generation 4 Digital I/O Accessories

Overview of Accessories

Accessories for Generation 4 I/O include the following:

- Adapter card—see below.
- Cables and connectors—see page 53.
- Fuses—see page 54.
- Jumper strap—see page 54.

PC to I/O Mounting Rack Adapter Card (G4AC5)

Description

The G4AC5 adapter card provides an interface between the PC and Opto 22 digital I/O mounting racks. As many as four G4AC5 adapter cards can be installed per PC.

A 50-conductor ribbon cable, supplied with the adapter card, connects the adapter to an I/O rack with header-style connectors

Requirements

- An external 5VDC power supply is required at the I/O mounting rack. This power cannot be provided by the G4AC5. Opto 22 recommends the use of a **linear** power supply for this purpose.
- A software driver is required to access the G4AC5 from Windows NT or when using Visual Basic on any operating system. For more information, contact Opto 22 Product Support. (See page 2.)

Rack Part Numbers for the G4AC5 Adapter Card

Fully Compatible Racks

The following racks are compatible with the G4AC5 adapter card:

- G4PB8
- G4PB16
- G4PB24

Racks That Can Be Modified

The following racks can be modified for use with the G4AC5 by removing the jumpers to pins 1 and 49. (These jumpers are labeled JP1 and JP2 on racks G4PB16J, G4PB16K, and G4PB16L.) Jumpers can be de-soldered or clipped.

WARNING: If these jumpers are not removed, the power-on LED will be lit regardless of the actual 5-volt power status. This can result in a false power-on indication and may cause damage to the PC.

- G4PB16J
- G4PB16K
- G4PB16L

Incompatible Racks

The following racks are NOT compatible with the G4AC5 because they do not have jumpers that can be removed. The rack's power-on LED will be lit regardless of the actual 5-volt power status. This can result in a false power-on status.

WARNING: Using any of these racks with the G4AC5 may cause damage to the PC.

- G4PB8H
- G4PB16H
- G4PB16HC

Cables and Connectors

Description

Opto 22 supplies several standard cables to interface with host controllers. There are three series of cables, each available in standard lengths. All three cable types use 50-conductor ribbon cable.

Each series of cables is designated according to the type of connector on each end.

- The HH series has a header connector on both ends.
- The CA series has an edge connector on both ends.
- The OD series has a header connector on one end and a card edge connector on the other.

Specifications

| Length | Series Part Numbers | | | |
|--------|--------------------------|--------------------------------|-----------------------------|--|
| (feet) | HH (Header to header) | CA (Card edge to card edge) | OD (Header to card edge) | |
| 1.5 | HH1.5 | | | |
| 2 | | CA2 | OD2 | |
| 4 | HH4 | CA4 | OD4 | |
| 6 | HH6 | CA6 | OD6 | |
| 8 | HH8 | CA8 | OD8 | |
| 10 | HH10 | CA10 | OD10 | |

Building Your Own Cables

If the standard cables do not meet your requirements, the following list of manufacturers can help you choose connectors and cable. Contact the manufacturer's distributor for more information.

50-Conductor Cables:

3M P/N 3365/50

ALPHA P/N 3580/50 or 3583/50

Header Connectors:

Circuit Assemblies, Inc. P/N CA50IDS2-C-SPT

Edge Connectors:

3M P/N 3415-0001 Panduit P/N 055-050-455

Connectors with Strain Reliefs:

Use only Panduit Corporation parts P/N 050A050-455

Fuses

Description

Generation 4 output modules use a 4-amp fuse mounted on the module. Each mounting rack includes one spare module fuse.

Additional fuses can be ordered from Opto 22 or directly from Wickmann, at phone number (404) 699-7820.

Ordering Guide

| Part Number | Description | | |
|-------------|---|--|--|
| FUSEG4 | 4-amp fuse for Generation 4 output modules (Wickmann, P/N 19370K) | | |
| FUSE01G4 | 1-amp fuse for Generation 4 digital logic power and brick power regulators (Wickmann, P/N 19373-1A) | | |

Jumper Strap

Description

Jumper straps are used to simplify wiring in applications that require a common connection between each I/O module position. The G4STRAP can be used on all G4 digital I/O mounting racks. (It does not work with the G4PB16J, G4PB16K, or G4PB16L racks with integral I/O, however.) The jumper strap has an insulated coating and can be cut to size.

Dimensions

Designing Custom I/O Mounting Racks

Introduction

Customers designing their own mounting systems for Generation 4 digital I/O modules may find the following information helpful. Circuit board layout information and a circuit board parts list are provided to help you get started.

Refer to individual module information in "Generation 4 Digital I/O Modules" on page 33 for additional specifications.
