IDEC SmartRelay

IDEC SmartRelay –the smart and expandable solution

Get smart with the fully programmable IDEC SmartRelay, a compact, expandable CPU that can replace multiple timers, relays and counters. Each CPU houses a real-time clock and calendar, and supports optional expansion I/O modules to enhance your control and monitoring applications. Program and edit using either the "smart" on-board selection buttons and display interface, or our even "smarter" software, WindLGC. The IDEC SmartRelay is the ideal solution for managing automatic lighting, access control, watering systems, pump control, or ventilation systems in factory or home automation.

Highlights of the FL1C series

- 32-bit processor
- 130 connectable blocks
- 4 new function blocks
- 4 x12 backlight display
- Timer and counter frequency up to 2KHz
- Online monitor
- Ladder programming
- Invert of inputs saves NOT function blocks

Digital/Analog Inputs

(6 Digital plus 2 Digital or Analog)
Multiple inputs provide direct communication with pushbuttons, sensors, switches, etc. (2kHz max. on I5 and I6). (Common use I/O for digital and analog: I7 and I8 on FL1C-H12RCE, FL1C-B12RCE, FL1C-H12SND.) Expandable up to 24 digital inputs.

LCD Display Panel

Display up to 48 characters as a text message. Monitor any of the 8 basic or 26 special function blocks, or confirm the status of the program for troubleshooting.

Multifunction Interface

A multifunction interface makes it easy to insert and remove the memory cartridge that controls the circuit program. It also supports the PC interface cable for uploading and downloading data from WindLGC.

Operational Control Buttons

Easy programming interface uses only six buttons. No tools necessary. Cursor keys can also be configured as inputs.

Other Key Features

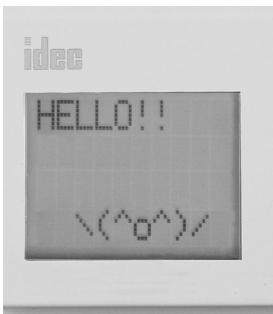

- Password protection
- Daylight savings time
- UL/c-UL listed, IEC61131/VDE0631, EMC Compliant, C-tick listed
- FM approved for Class 1, Div 2 Class 1, Zone 2 hazardous locations.

Digital Outputs

Use the outputs to control lights, small-sized motors and solenoid valves up to 10A. Expandable up to 16 digital outputs.

IDEC SmartRelay

Other Characteristics

Text Display

It can display messages with background lighting up to 48 characters long from a selection of 97 character types.

Operational Buttons

Use the selection buttons for easy confirmation or modification of the circuit being displayed. The cursor keys can be configured as inputs.

Memory Cartridge

FL1C-PM3 is a memory cartridge with know-how protection. Not only is it possible to save your program, but also to protect it from unintended modification, copying or deletion.

Not required for operation.

Expansion Modules

Optional expansion I/O modules allow you to add digital input, output and LONWORKS®/AS-Interface communication modules as well as analog inputs to your system. Just snap-on and go – no special software or cables required.

FC4A-USB	USB/RS232 converter	

Function Blocks

General Function Blocks

- AND**

 Series connection of normally open contacts
- AND (Edge)**

 Edge detection with edge evaluation (pos. edge)
- NAND**

 Parallel connection of normally closed contacts
- NAND (Edge)**

 Edge detection with edge evaluation (pos. edge)
- OR**

 Parallel connection of normally open contacts
- NOR**

 Series connection of normally closed contacts
- XOR**

 Double changeover contact
- NOT**

 Connection of closed contact

Special Function Blocks

- On-delay**
- Off-delay**
- On-/Off-delay**
- Retentive on-delay**
- Latching relay**
- Current impulse relay**
- Interval time-delay relay/ Pulse output**
- Edge-triggered interval time-delay relay**
- Seven-day time switch**
- Twelve-month time switch**
- Up/down counter**
- Analog differential trigger**
- Analog value monitoring**

- Operating hours counter**
- Asynchronous pulse generator**
- Random generator**
- Frequency trigger**
- Analog trigger**
- Analog comparator**
- Stairwell light switch**
- Dual-function switch**
- Message texts**
- Softkey**
- Analog amplifier**
- Shift register**

	Slave type	Standard slave	
	Profile	I/O code 7 I/D code F I/D2 code F	
	Degree of Protection	IP20	
Terminal Style	Screw terminal (tightening torque: max. 0.5Nm)		
Applicable wire	0.5 to 1.5mm ²		
Instruction	on a 35mm mounting rail according to DIN EN50022/wall mounting		
Dimensions	36W × 90H × 58D mm		
Weight	75g		

Logic Assignments

"n" depends on the plug-in position of the expansion module relative to the IDEC SmartRelay CPU. It indicates the number of the input or output in the IDEC SmartRelay program code.

Connection Diagrams

Inputs (CPU)

FL1C-H12RCE/-B12RCE/H12SND

The inputs of these devices are non-isolated and therefore require the same reference potential (ground) as the power supply. With the FL1B-H12RCE/-B12RCE and FL1B-H12SND you can tap the analog signal between the supply voltage and ground

FL1C-H12RCC/-B12RCC

The inputs of these devices are arranged in 2 groups with 4 inputs each. Different phases are only possible between, but not within the blocks.

Current safety regulations (VDE 0110, ... and IEC 61131-2, ... as well as UL and CSA) do not permit the connection of different phases to one input group (I1-4 or I5-8) of an AC model or on the inputs of one digital module.

Outputs

Connecting the load to the FL1C-*12R:**

Protection with automatic circuit breaker (max. 16A) if desired

Connecting the load to a IDEC SmartRelay with transistor outputs (FL1C-H12SND):

Load: 24 V DC, 0.3 A max.

- **High-speed/Optimal Communication Performance**

For optimal and high-speed communication performance between the IDEC SmartRelay and the various modules, we recommend you install the digital modules first, then the analog modules (see example above).

Setup With Different Voltage Classes

- **Rules**
Digital modules can only be connected to devices of the same voltage class.

■ Base module, ■ LONWORKS® communication module, ■ Combination I/O module, ■ Analog input module

1. The LONWORKS® communication module can be used with any base module and expansion I/O module.
2. The LONWORKS® communication module must be mounted at the right-most position of the row.
3. I/O numbers are automatically allocated starting with the base module.

WindLGC Programming Software

WindLGC is the exclusive programming software for the IDEC SmartRelay using Windows®. Edit, save, and print out your programs.

WindLGC Ver. 4 Features:

- Ladder programming
- Online Monitor
- Program Comparison
- Time Simulation
- Simplified connection of the functions
- Programs can be saved in PDF or JPG format

Just click the function blocks you need and link function blocks for easy wiring. Devise complicated circuits using the convenient functions of WindLGC.

To configure IDEC SmartRelay FL1C series, you must upgrade to WindLGC version 4.0.

WindLGC system requirements:

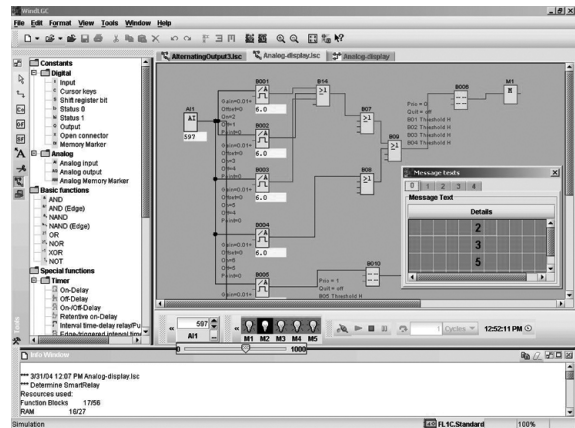

- OS: Windows95/98/ME/NT/2000/XP
- CPU recommendation: Pentium 266MHz or higher
- Memory: 64MB or more
- RAM recommendation: 128MB
- Hard disk space: 90MB or more for installing WindLGC software.
- Monitor Recommendation: Display more than 800 x 600 dots and 256 colors

Free download service, if upgrading from WindLGC Version 3 to Version 4, available at www.idec.com/usa
