Note: For more information on wiring connections, please refer to the wiring section starting on page D-1.

Configuration Guidelines

Remember to add all the current consumptions of basic I/O, special I/O modules, and CPU bus units to determine which power supply is appropriate.

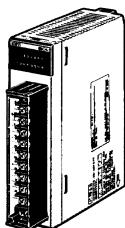

Please refer to the **System Configuration** section for current consumption of individual modules.

For more I/O options, see the **Industrial Networks and Communication** section for DeviceNet I/O on page C-123 and CompoBus/S I/O on page C-138.

Note: 1. In addition to the normal I/O functions, C200H High-density I/O Units (Special I/O Units) provide the following functions.

- Dynamic I/O (except for OD501/OD215): Instead of normal static inputs and normal static outputs, dynamic outputs and dynamic inputs are used to increase I/O capacity to 128 inputs and 128 outputs through the use of strobe signal outputs. These functions can be used to reduce wiring to devices with more digits, such as displays and keyboards.
 - High-speed Inputs (except OD501/OD215): Eight of the inputs can be set as high-speed inputs to accurately input short pulses from devices like photomicrosensors.
2. High-speed inputs, 128-pt dynamic outputs possible

Interrupt Module

CS1W-INT01

■ System Configuration

When the input on the Interrupt Input Unit turns ON, the CPU Unit is notified immediately, cyclic task execution (normal programming) is interrupted and an I/O interrupt task is executed.

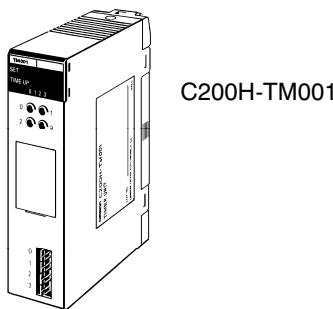

■ Features

- High-speed Response (0.42 ms OFF to ON)
- Execute an interrupt task within 1.0 ms after input turns ON

■ Specifications

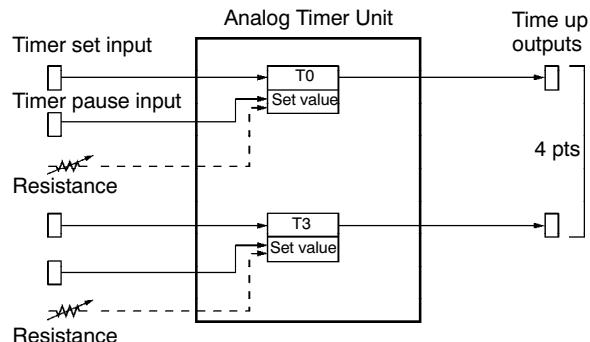

Classifications	Input voltage	Inputs	Input pulse width	Connections	Allocations (CIO 0319 to CIO 2000)	Model
CS1W Basic I/O Unit	24 VDC	16 pts	ON: 0.1 ms min. OFF: 0.5 ms min.	Removable terminal block	16 bits	CS1W-INT01

Note: The interrupt function can be used with the CPU Backplane only. (Up to 2 Interrupt Input Units can be mounted to a CPU Rack.)

Provides four timers easily adjusted on-site via front-panel adjustments or external variable resistors: No Programming Device required. Using timer pause inputs enables applications as accumulative timer.

Safety Relay Unit

CS1W-SF200

This Safety Relay Unit mounts as an I/O Unit and provides both safety relays and inputs for monitoring.

■ Features

- Safety relays and monitor inputs in 1 Unit to reduce wiring and space.
- Safety relays operate with separate power supply from PLC.
- Monitor safety circuit output, K1/K2 relay, or power status from PLC.
- Four general-purpose inputs provided.
- Safety standards: EN954-1 and EN60204-1

■ Specifications

Item	Specifications
Contact resistance	100 mΩ (5 VDC, 1 A, voltage drop method)
Operating time	300 ms max. (not including bounce)
Response time	10 ms max. (time from input OFF to main contact OFF, not including bounce)
Insulation resistance (See note.)	20 MΩ min. (at 500 VDC) for following: Safety circuits-safety outputs, General inputs-safety outputs, Different poles of safety outputs, and safety circuits-general inputs
Withstand voltage (See note.)	2,500 VAC, 50/60 Hz for 1 min for following: Safety circuits-safety outputs, General inputs-safety outputs, Different poles of safety outputs 500 VAC, 50/60 Hz for 1 min for Safety circuits-general inputs
