

## Electronic Circuit Protection ESX10-T

Electronic circuit protection type ESX10-T is designed to ensure selective disconnection of 24VDC load systems.

24VDC power supplies, which are widely used in industry today, will shut down the output in the event of an overload with the result that one faulty load in the system can lead to complete disconnection of all loads.

Through selective disconnection the ESX10-T responds much faster to overload or short circuit conditions than the switch-mode power supply. This is achieved by active current limitation. The ESX10-T limits the highest possible current to 1.3 to 1.8 times the selected rated current of the circuit protector. Thus it is possible to switch on capacitive loads of up to 20,000  $\mu$ F, but they are disconnected only in the event of an overload or short circuit.

For optimal alignment with the characteristics of the application the current rating of the ESX10-T can be

selected in fixed values from 0.5 A...12 A. Failure and status indication are provided by a multicolour LED and an integral short-circuit-proof status output or a relay signal contact. Remote operation is possible by means of a remote reset signal or a remote ON/OFF control signal. The manual ON/OFF button allows separate actuation and reset of individual load circuits.

**Upon detection of overload or short circuit in the load circuit, the MOSFET of the load output will be blocked to interrupt the current flow. The load circuit can be re-activated via the remote electronic reset input, control input or manually by means of the ON/OFF button.**

### Features

- Selective load protection, electronic trip characteristics
- Active current limitation for safe connection of capacitive loads up to 20,000  $\mu$ F and on overload/short circuit
- Current ratings 0.5 A...12 A
- Reliable overload disconnection with  $1.1 \times I_n$  plus, even with long load lines or small cable cross sections (see table 3)
- Manual ON/OFF button (S1)
- Control input IN+ for remote ON/OFF signal (option)
- Electronic **reset** input RE (option)
- Clear status and failure indication through LED, status output SF or Si contact F
- Integral fail-safe element adjusted to current rating
- Width per unit only 12.5 mm
- Rail mounting
- Ease of wiring through busbar LINE+ and 0 V as well as signal bars and bridges

Approvals

Authority	Voltage rating	Current ratings
UL 2367 (E306740)	24VDC	0.5...12 A
UL 1604 (E322549) (class I, div. 2, group A, B, C, D)	24VDC	0.5...12 A
UL508 / cUL 508	24VDC	0.5...12 A
CSA C22.2 No: 213 (class 1, division 2)		
CSA C22.2 No: 142		
Class 2 Meets requirement for Class 2 current limitation (ESX10-T...-0.5 A / 1 A / 2 A / 3 A)		

Technical data

(T<sub>ambient</sub> = 40°C, operating voltage U<sub>b</sub> = 24VDC)

Operating data

Operating voltage U <sub>b</sub>	24VDC (18...32 V)
Current rating I <sub>n</sub>	fixed current ratings: 0.5, 1 A, 2 A, 3 A, 4 A, 6 A, 8 A, 10 A, 12 A
Closed current I <sub>q</sub>	ON condition: typically 20...30 mA depending on signal output
Status indication by means of	<ul style="list-style-type: none"> <li>• <b>multicolour LED:</b></li> <li>GREEN: unit is ON, power-MOSFET is switched on - status output SF ON, supplies +24VDC</li> <li>ORANGE: in the event of overload or short circuit until electronic disconnection</li> <li>RED: - unit electronically disconnected - load circuit/Power-MOSFET OFF</li> <li>OFF: - manually switched off (S1 = OFF) or device is dead - undervoltage (U<sub>b</sub> &lt; 8 V) - after switch-on till the end of the delay period</li> <li>• status output SF (option)</li> <li>• potential-free signal contact F (option)</li> <li>• ON/OFF/ condition of switch S1</li> </ul>
<b>Load circuit</b>	
Load output	Power-MOSFET switching output (high side switch)
Overload disconnection	typically 1.1 x I <sub>n</sub> (1.05...1.35 x I <sub>n</sub> )
Short-circuit current I <sub>K</sub>	active current limitation (see table 1)
Trip time for electronic disconnection	see time/current characteristics typically 3 s at I <sub>Load</sub> > 1.1 x I <sub>n</sub> typically 3 s...100 ms at I <sub>Load</sub> > 1.8 x I <sub>n</sub> (or 1.5 x I <sub>n</sub> /1.3 x I <sub>n</sub> )
Temperature disconnection	internal temperature monitoring with electronic disconnection
Low voltage monitoring	
load output	with hysteresis, no reset required load "OFF" at U <sub>b</sub> < 8 V
Starting delay t <sub>start</sub>	typically 0.5 sec after every switch-on and after applying U <sub>b</sub>
Disconnection of load circuit	electronic disconnection
Free-wheeling circuit	external free-wheeling diode recommended with inductive load
Several load outputs must not be connected in parallel	

Technical data (T<sub>ambient</sub> = 40°C, operating voltage U<sub>b</sub> = 24VDC)

<b>Status output SF</b>	<b>ESX10-TB-114/-124/</b>
Electrical data	plus-switching signal output, connects U <sub>b</sub> to terminal 12 of module 17plus nominal data: 24VDC / max. 0.2 A (short circuit proof) status output is internally connected to GND with a 10 kOhm resistor
Status OUT	ESX10-TB-114/-124 (signal status OUT), at U <sub>b</sub> = +24 V +24 V = S1 is ON, load output connected through 0V = S1 is ON, load output blocked and/or switch S1 is OFF red LED lighted
OFF condition	0 V level at status output when: <ul style="list-style-type: none"> <li>• switch S1 is in ON position, but device is still in switch-on delay</li> <li>• switch S1 is OFF, or control signal OFF, device is switched off</li> <li>• no operating voltage U<sub>b</sub></li> </ul>
<b>Signal output F</b>	<b>ESX10-TB-101/-102</b>
Electrical data	potential-free signal contact max. 30VDC/0.5 A, min. 10 V/10 mA
ON condition LED green	voltage U <sub>b</sub> applied, switch S1 is in ON position no overload, no short circuit
OFF condition LED off	<ul style="list-style-type: none"> <li>• device switched off (switch S1 is in OFF position)</li> <li>• no voltage U<sub>b</sub> applied</li> </ul>
Fault condition LED orange	overload condition > 1.1 x I <sub>n</sub> up to electronic disconnection
Fault condition LED red	electronic disconnection upon overload or short circuit device switched off with control signal (switch S1 is in ON position)
ESX10-TB-101	single signal, make contact contact SC/SO-S1 open
ESX10-TB-102	single signal, break contact contact SC/SO-S1 closed
Fault	signal output fault conditions: <ul style="list-style-type: none"> <li>• no operating voltage U<sub>b</sub></li> <li>• ON/OFF switch S1 is in OFF position</li> <li>• red LED lighted (electronic disconnection)</li> </ul>
<b>Reset input RE</b>	<b>ESX10-TB-124</b>
Electrical data	voltage: max. +32VDC high > 8VDC ≤32VDC low ≤3VDC > 0 V power consumption typically 2.6 mA (+24VDC) min. pulse duration typically 10 ms
Reset signal RE (terminal 22)	The electronically blocked ESX10-TB-124 may remotely be reset via an external momentary switch due to the falling edge of a +24 V pulse. A common reset signal can be applied to several devices simultaneously. Switched on devices remain unaffected.
<b>Control input IN+</b>	<b>ESX10-TB-114</b>
Electrical data	see reset input RE
Control signal IN+ (terminal 21)	+24V level (HIGH): device will be switched on by a remote ON/OFF signal 0 V level (LOW): device will be switched off by a remote ON/OFF signal
Switch S1 ON/OFF	unit can only be switched on with S1 if a HIGH level is applied to IN+

**Technical data** (T<sub>ambient</sub> = 40°C, operating voltage U<sub>b</sub> = 24VDC)

General data	
Fail-safe element:	backup fuse for ESX10-T <u>not required</u> because of the integral redundant fail-safe element
Terminals	
<b>LINE+ / LOAD+ / 0V</b>	
screw terminals	M4
max. cable cross section

EMC (EMC directive, CE logo)	emission: EN 61000-6-3 susceptibility: EN 61000-6-2
Insulation co-ordination (IEC 60934)	0.5 kV/2 pollution degree 2 re-inforced insulation in operating area
dielectric strength	max. 32VDC (load circuit)
Insulation resistance (OFF condition)	n/a, only electronic disconnection
Approvals	UL 2367, File E306740, Solid State Overcurrent Protectors UL 1604 (class I, div. 2, zone 2), UL508 pending, CE logo
Dimensions (W x H x D)	12.5 x 80 x 83 mm
Mass	approx. 65 g

**Table 1:**  
voltage drop, current limitation, max. load current

current rating I <sub>n</sub>	typically voltage drop U <sub>0n</sub> at I <sub>n</sub>	active current limitation (typically)	max. load current at 100% ON duty	
			T <sub>U</sub> = 40 °C	T <sub>U</sub> = 50 °C
0.5 A	70 mV	1.8 x I <sub>n</sub>	0.5 A	0.5 A
1 A	80 mV	1.8 x I <sub>n</sub>	1 A	1 A
2 A	130 mV	1.8 x I <sub>n</sub>	2 A	2 A
3 A	80 mV	1.8 x I <sub>n</sub>	3 A	3 A
4 A	100 mV	1.8 x I <sub>n</sub>	4 A	4 A
6 A	130 mV	1.8 x I <sub>n</sub>	6 A	5 A
8 A	120 mV	1.5 x I <sub>n</sub>	8 A	7 A
10 A	150 mV	1.5 x I <sub>n</sub>	10 A	9 A
12 A	180 mV	1.3 x I <sub>n</sub>	12 A	10.8 A

Attention: when mounted side-by-side without convection the ESX10-T should not carry more than 80% of its rated load with 100% ON duty due to thermal effects.

Please note:

- The user should ensure that the cable cross sections of the relevant load circuit are suitable for the current rating of the ESX10-T used.
- Automatic start-up of machinery after shut down must be prevented (Machinery Directive 98/37/EG and EN 60204-1). In the event of a short circuit or overload the load circuit will be disconnected electronically by the ESX10-T.

Dimensions

This is a metric design and millimeter dimensions take precedence ( $\frac{\text{mm}}{\text{inch}}$ )

Time/Current characteristic curve (T<sub>ambient</sub> = 40 °C)

- The trip time is typically 3 s in the range between 1.1 and 1.8 x I<sub>n</sub><sup>\*1)</sup>.
- Electronic current limitation occurs at typically 1.8 x I<sub>n</sub><sup>\*1)</sup> which means that under all overload conditions (independent of the power supply and the resistance of the load circuit) the max. overload before disconnection will not exceed 1.8 x I<sub>n</sub><sup>\*1)</sup> times the current rating. Trip time is between 100 ms and 3 sec (depending on overload or at short circuit).
- Without this current limitation a considerably higher overload current would flow in the event of an overload or short circuit.

\*1) current limitation typically 1.8 x I<sub>n</sub> times rated current at I<sub>n</sub> = 0.5 A...6 A  
 current limitation typically 1.5 x I<sub>n</sub> times rated current at I<sub>n</sub> = 8 A or 10 A  
 current limitation typically 1.3 x I<sub>n</sub> times rated current at I<sub>n</sub> = 12 A

Table 3: Reliable trip of ESX10-T

Reliable trip of ESX10-T with different cable lengths and cross sections

## Accessories for ESX10-T

## Description

The ESX10-T features an integral power distribution system. The following wiring modes are possible with various pluggable current and signal busbars:

- LINE +(24VDC)
- 0 V

**Caution:** The electronic devices ESX10-T require a 0 V connection

- signal contacts
- reset inputs

Description	Part No.	
<b>Busbars for LINE+ and 0 V</b>	<b>6720005315</b>	
max. load with one line entry (recommended: centre line entry)	I <sub>max</sub>	50 A
max. load with two line entries	I <sub>max</sub>	63 A
length:	500 mm	
<hr/>		
<b>Signal busbars for signal contacts and reset inputs</b>	<b>6720005316</b>	
max. load with one line entry	I <sub>max</sub>	1 A
with one series connection of signal contacts	I <sub>max</sub>	0.5 A
length:	500 mm	
<hr/>		
<b>Jumpers for signal contacts</b>	<b>6720005317</b>	
length:	21 mm	
packing unit:	10 pcs	

All dimensions without tolerances are for reference only. In the interest of improved design, performance and cost effectiveness the right to make changes in these specifications without notice is reserved. Product markings may not be exactly as the ordering codes. Errors and omissions excepted.
