

# PolySwitch Resettable Devices

## Telecommunications & Networking Devices

PolySwitch devices for telecommunication and networking applications were initially designed over ten years ago to meet the growing demand for resettable overcurrent protection. These product families help provide protection against power cross and power induction surges as defined in ITU, Telcordia GR1089, and UL60950. Available in chip, surface-mount, and radial-leaded configurations, PolySwitch devices help improve the reliability of customer premise and network equipment world wide.

### Benefits

- Many product choices give engineers more design flexibility
- Compatible with high volume electronics assembly
- Assist in meeting regulatory equipment requirements
- Improved line balance
- Applicable for legacy POTS and modern digital communications equipment

### Features

- RoHS compliant
- Resettable overcurrent protection
- Surface-mount, radial-leaded, and chip form factors
- Fast time-to-trip
- Agency recognition: UL, CSA, TÜV
- Resistance sorted and matched devices available
- Low parasitic capacitance/flat impedance with frequency

### Applications

- |                      |                                 |                                  |
|----------------------|---------------------------------|----------------------------------|
| • Modems             | • PBX systems                   | • Powered ethernet systems       |
| • Phone sets         | • MDF modules                   | • VoIP (Voice over IP equipment) |
| • Fax machines       | • Analog and digital line cards | • LAN, WAN equipment             |
| • Phone wall outlets | • T1/E1 equipment               | • Customer premise equipment     |
| • Alarm systems      | • xDSL modems and splitters     | • Access network hardware        |

## Protection Application Guide for Telecommunications and Networking Devices\*

To use this guide, follow the steps below:

1. Select your equipment type from the guide below.
2. Select the type of protection depending on the agency and regional specifications in the second column.
3. Select the form factor for your application.
4. Use the Agency Specification/ PolySwitch Device Selection Guide on the next page to select a specific part number for each application based on the agency requirements.
5. Parts with fast time-to-trip or low resistance are available. Please consult a Tyco Electronics Circuit Protection product representative.

\* This list is not exhaustive. Tyco Electronics welcomes our customers' input for additional application ideas for PolySwitch resettable devices.

† For improved line balance in these applications, resistance-matched parts are recommended.

‡ May require additional impedance or coordination with primary protector.

\*\* For more information on Raychem Circuit Protection SiBar thyristor surge protectors, refer to the SiBar Thyristor Surge Protectors Section.

†† FT600-1250 are surface mount telecom fuse devices. FT600-0500 and FT600-2000 reference also available. See Telecom Fuses Section.

‡‡ For details on decaSMDC050F/60-2, see Surface-mount Devices Section.

\*\*\* For details on BBRF series, see Radial-leaded Devices Section.

**Agency Specification/Selection Guide for Telecommunications and Networking Devices**

Use the guide below to select the PolySwitch devices which are typically used in your application. The following pages contain the specifications for the part numbers recommended below. PolySwitch devices assist telecommunication equipment in meeting the applicable protection requirements of these industry specifications. Refer to individual agency specifications for test procedures and circuit schematics. Users should independently evaluate the suitability of, and test each product for their application.

Family	Product*	Lightning	Power Cross/Contact/Induction
TCF250	TCF250-100T	ITU K.20 – 1.0kV 10/700µs	PRCYD/T694
		GR-1089 Port Types 2 & 4 – 1st Level	ITU K.20/21/45 – 0.2A <sup>2</sup> s
			ITU K.20/21/45 – 1A <sup>2</sup> st
		GR-1089 Port Type 4 – 120V <sub>AC</sub> , 25A <sub>sc</sub>	
	TCF250-120T	ITU K.20/21/45 – 1.5kV 10/700µs	ITU K.20/21/45 – 230V <sub>AC</sub> , 10Ω

**Voltage Ratings for Telecommunications and Networking Devices**

For Raychem Circuit Protection telecommunications devices there are two applicable voltage ratings. These are **V<sub>Max</sub> Operating** and **V<sub>Max</sub> Interrupt**. To help understand the nature of these two different voltage ratings, the following definitions are provided:

**V<sub>Max</sub> Operating** : For telecommunications devices this is the voltage used to obtain component recognition under UL1434. Most Raychem Circuit Protection devices are certified at 60V but can withstand higher V<sub>Max</sub> Interrupt conditions as noted above. See Table T3 for its V<sub>Max</sub> Operating.

**\*V<sub>Max</sub> Interrupt** : Under specified conditions this is the highest voltage that can be applied to the device at the maximum current. Devices have been designed to trip safely under higher power level cross conditions, as listed above, to assist equipment in meeting the appropriate industry conditions.

**Notes:**

- I<sub>H</sub> : Hold current: maximum current device will pass without interruption in 20°C still air.
- I<sub>T</sub> : Trip current: minimum current that will switch the device from low resistance to high resistance in 20°C still air.
- V<sub>Max</sub> Operating : Maximum continuous voltage device can withstand without damage at rated current. This voltage is used for component recognition under UL1434.
- V<sub>Max</sub> Interrupt : Maximum voltage that can be safely placed across a device in its tripped state. Devices have been designed to trip safely under higher level power cross conditions to assist equipment in meeting the appropriate ITU, UL60950, or GR1089 industry requirements.
- I<sub>Max</sub> Interrupt : Maximum fault current device can withstand without damage at rated operating voltage. This current is used for component recognition under UL1434. Devices have been designed to trip safely under higher level power cross conditions to assist equipment in meeting the appropriate ITU, UL60950, or GR1089 industry requirements.
- P<sub>D</sub> : Power dissipated from device when in the tripped state in 20°C still air.
- R<sub>Min</sub> : Minimum resistance of device as supplied at 20°C unless otherwise specified.
- R<sub>Max</sub> : Maximum resistance of device as supplied at 20°C unless otherwise specified.
- R<sub>1</sub>Max : Maximum resistance measured one hour post-trip or post-reflow at 20°C.

 \* 250V<sub>AC</sub> interrupt products are designed to help equipment pass ITU K.20, K.21, & K.45 recommendations and Telcordia GR-1089 Port Type 2 & 4 requirements.

 † 600V<sub>AC</sub> interrupt products are designed to help equipment pass UL60950, TIA-968-A and GR1089 Port Type 1, 3 & 5 requirements.

‡ Product is not currently available in a resistance matched or sorted option.

 \*\* R<sub>1</sub>Max measured 1 hour post-trip, or 24 hours post-reflow at 20°C.

**Warning :**

- Users should independently evaluate the suitability of and test each product selected for their own application.
- Operation beyond the maximum voltage or current ratings or improper use may result in device damage and possible electrical arcing and flame.
- The devices are intended for protection against occasional overcurrent or overtemperature fault conditions and should not be used when repeated fault conditions or prolonged trip events are anticipated.
- Operation in circuits with a large inductance can generate a circuit voltage (L di/dt) above the rated voltage of the PolySwitch resettable device. This product should not be used in an application where the maximum interrupt voltage can be exceeded by inductive spikes.
- A PPTC device is not a fuse - it is a nonlinear thermistor that limits current. Under a fault condition all PPTC devices go into a high resistance state but do not open circuit, so hazardous voltage may be present at PPTC locations.
- Contamination of the PPTC material with certain silicon based oils or some aggressive solvents can adversely impact the performance of the devices.
- Device performance can be impacted negatively if devices are handled in a manner inconsistent with recommended electronic, thermal, and mechanical procedures for electronic components.
- PPTC devices are not recommended to be installed in applications where the device is constrained such that its PPTC properties are inhibited, for example in rigid potting materials or in rigid housings, which lack adequate clearance to accommodate device expansion.

[Operating temperature range for all listed products is -40°C to 85°C, except for TRF250-080T and TRF250-184 (0°C to 85°C)]

**TCF250\***
**Physical Characteristics**

Terminal material	Nickel-plated copper foil
-------------------	---------------------------

**Environmental Specifications**

Test	Conditions
Passive aging	60°C, 1000 hours
	85°C, 1000 hours
Humidity aging	85°C, 85% RH, 1000 hours
Thermal shock	125°C, -55°C (10 times)
Solvent resistance	MIL-STD-202, Method 215F

**Note:** Storage conditions: 40°C max., 70% RH max., devices should remain in original sealed bag prior to use. Devices may not meet specified values if these storage conditions are exceeded.

**TRF250\***
**Physical Characteristics**

Lead material	Tin-plated copper, 22AWG
Insulating material	Cured epoxy polymer
Flammability	per IEC 695-2-2 Needle Flame Test for 20s
Soldering characteristics	ANSI/J-STD-002, Category 3
Solder heat withstand	IEC-STD 68-2-20, Test Tb, Section 5 Method 1A, Condition B: can withstand 10 seconds at 260°C±5°C

**Note:** Devices are not designed to be placed through a reflow process.

**Environmental Specifications**

Test	Conditions
Passive aging	60°C, 1000 hours
	85°C, 1000 hours
Humidity aging	85°C, 85% RH, 1000 hours
Thermal shock	125°C, -55°C (10 times)
Solvent resistance	MIL-STD-202, Method 215F

**Note:** Storage conditions: 40°C max., 70% RH max., devices should remain in original sealed bag prior to use. Devices may not meet specified values if these storage conditions are exceeded.

**Physical Characteristics**

Terminal material	Tin-plated brass, Nickel under-plating
Soldering characteristics	EIC 60008-2-58

**Environmental Specifications**

Test	Conditions
Passive aging	60°C, 1000 hours
	85°C, 1000 hours
Humidity aging	85°C, 85% RH, 500 hours
Thermal shock	125°C, -55°C (10 times)
Solvent resistance	MIL-STD-202, Method 215F

**Note:** Storage conditions: 40°C max., 70% RH max., devices should remain in original sealed bag prior to use. Devices may not meet specified values if these storage conditions are exceeded.

\* 250V<sub>AC</sub> interrupt products are designed to help equipment pass ITU K.20, K.21, & K.45 recommendations and Telcordia GR-1089 Port Type 2 & 4 requirements.

† 600V<sub>AC</sub> interrupt products are designed to help equipment pass UL60950, TIA-968-A and GR1089 Port Type 1, 3 & 5 requirements.

‡ Excluding TRF600-150 and TRF600-400, which have a coating that is not rated for dielectric withstand and can withstand 500h at 85°C/85% RH or 1000h at 60°C/90% RH.

**Table T5 Physical Characteristics and Environmental Specifications for Telecommunications and Networking Devices**

... Cont'd

[Operating temperature range for all listed products is -40°C to 85°C, except for TRF250-080T and TRF250-184 (0°C to 85°C)]

**TRF600<sup>+</sup>**
**Physical Characteristics**

Lead material	Tin-plated copper, 22AWG
Insulating material	Cured epoxy polymer†
Flammability	per IEC 695-2-2 Needle flame test for 20s
Soldering characteristics	ANSI/J-STD-002, Category 3
Solder heat withstand	IEC-STD 68-2-20, Test Tb, Section 5 Method 1A, Condition B: can withstand 10 seconds at 260°C±5°C

**Note:** Devices are not designed to be placed through a reflow process.

**Environmental Specifications**

Test	Conditions
Passive aging	60°C, 1000 hours
	85°C, 1000 hours
Humidity aging	85°C, 85% RH, 1000 hours‡
Thermal shock	125°C, -55°C (10 times)
Solvent resistance	MIL-STD-202, Method 215F

**Note:** Storage conditions: 40°C max., 70% RH max., devices should remain in original sealed bag prior to use. Devices may not meet specified values if these storage conditions are exceeded.

**TS600<sup>+</sup>**
**Physical Characteristics**

Terminal material	Tin-plated brass
Insulating material	Nylon resin (UL94V-0), 1000V dielectric rating
Flammability	IEC 695-2-2 Needle Flame Test for 20s
Soldering characteristics	ANSI/J-STD-002, Category 3
Solder heat withstand	IEC-STD 68-2-20, Test Tb, Section 5 Method 1A

**Environmental Specifications**

Test	Conditions
Passive aging	60°C, 1000 hours
	85°C, 1000 hours
Humidity aging	85°C, 85% RH, 1000 hours
Thermal shock	125°C, -55°C (10 times)
Solvent resistance	MIL-STD-202, Method 215F

**Note:** Storage conditions: 40°C max., 70% RH max., devices should remain in original sealed bag prior to use. Devices may not meet specified values if these storage conditions are exceeded.

**TSM600<sup>+</sup>**
**Physical Characteristics**

Terminal material	Tin-plated brass
Insulating material	Nylon resin (UL94V-0), 1000V dielectric rating
Flammability	IEC 695-2-2 Needle Flame Test for 20s
Soldering characteristics	EIC60068-2-58, Method 7
Solder heat withstand	IEC-STD 68-2-20, Test Tb, Section 5 Method 1A

**Environmental Specifications**

Test	Conditions
Passive aging	60°C, 1000 hours
	85°C, 1000 hours
Humidity aging	85°C, 85% RH, 1000 hours
Storage humidity	IPer IPC/JEDEC J-STD-020A Level 2a
Thermal shock	125°C, -55°C (10 times)
Solvent resistance	MIL-STD-202, Method 215J

**Note:** Storage conditions: 40°C max., 70% RH max., devices should remain in original sealed bag prior to use. Devices may not meet specified values if these storage conditions are exceeded.

**Solder Reflow and Rework Recommendations for Telecommunications Surface-mount Devices**

**Solder Reflow**

- Recommended reflow method: IR, vapor phase oven, hot air oven.
- Surface-mount devices are not designed to be wave soldered to the bottom side of the board.
- Recommended maximum paste thickness of 0.25mm (0.010 in).
- Devices can be cleaned using standard industry methods and solvents.

**Rework**

- If a device is removed from the board, it should be discarded and replaced with a new device.

**Figure T21**

**Wave Soldering and Rework Recommendations for Telecommunications Radial-leaded Devices**

**Recommended Wave Soldering**

- Soldering temperature profile  
Temperature characteristic at component terminal with dual wave soldering

**Rework**

- If a device is removed from the board, it should be discarded and replaced with a new device.

**Figure T22**

**Table T8 TRF250/TRF600 Tape and Reel Specifications for Telecommunications and Networking Device**

TRF250/TRF600 devices are available in tape and reel packaging per EIA 468-B standard. See Figures T23 and T24 for details.

Dimension Description	EIA Mark	IEC Mark	Dimension (mm)	Tolerance
Carrier tape width	W	W	18	-0.5/+1.0
Hold down tape width	W <sub>4</sub>	W <sub>0</sub>	5	Minimum
Top distance between tape edges	W <sub>6</sub>	W <sub>2</sub>	3	Maximum
Sprocket hole position	W <sub>5</sub>	W <sub>1</sub>	9	-0.5/+0.75
Sprocket hole diameter	D <sub>0</sub>	D <sub>0</sub>	4	±0.2
Abcissa to plane (straight lead)	H	H	18.5	±3.0
Abcissa to plane (kinked lead)*	H <sub>0</sub>	H <sub>0</sub>	16	-0.5/+0.6
Abcissa to top	H <sub>1</sub>	H <sub>1</sub>	32.2	Maximum

**Figure T25 EIA Referenced Taped Component Dimensions for TS Devices**

**Figure T26 EIA Referenced Reel Dimensions for TS Devices**

**Resistance-sorted and Resistance-matched Devices**

Most TCF, TRF and TS devices are available in resistance-sorted and/or resistance-matched versions.

**Resistance-sorted Devices**

Resistance-sorted devices (part number suffix "Rx", where x = 1, 2, A, B, C, F etc.) are supplied with resistance values that are within specified segments of the device's full range of resistance.

**Feature**

- Narrow resistance range.

**Benefits**

- Greater flexibility for design engineers.
- Lower resistance devices can allow for increased loop length on line card designs.
- Higher resistance devices may provide greater protection by offering faster time-to-trip.

**Resistance-matched Devices**

Resistance-matched devices are supplied such that all parts in one particular package (or reel) are within  $0.5\Omega$  of each other ( $1.0\Omega$  for TRF250-080T devices). Individual matched packages are supplied from the full resistance range of the specified device.

**Feature**

- Tighter resistance balance between any two parts in a package.

**Benefits**

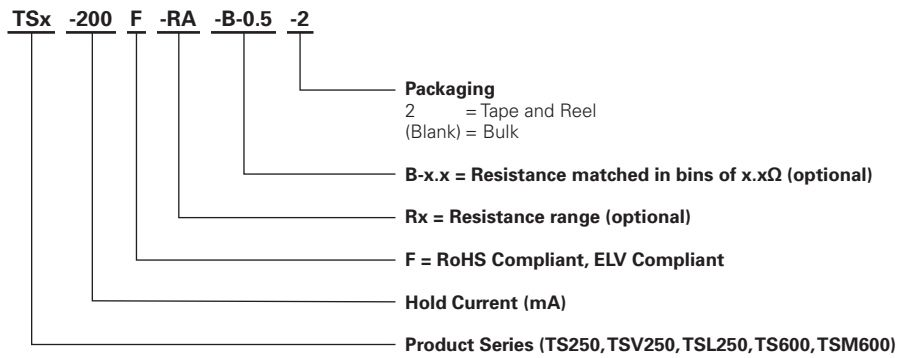

- Resistance-matched devices may reduce the tip-ring resistance differential, reducing the possibility of line imbalance.
