FAST RECOVERY POWER RECTIFIERS

50-600 VOLTS
30 AMPERES

STUD MOUNTED FAST RECOVERY POWER RECTIFIERS

... designed for special applications such as dc power supplies, inverters, converters, ultrasonic systems, choppers, low RF interference, sonar power supplies and free wheeling diodes. A complete line of fast recovery rectifiers having typical recovery time of 150 nanoseconds providing high efficiency at frequencies to 250 kHz.

Designer's Data for "Worst Case" Conditions

The Designer's Data sheets permit the design of most circuits entirely from the information presented. Limit curves — representing boundaries on device characteristics — are given to facilitate "worst case" design.

*MAXIMUM RATINGS

Rating	Symbol	1N3909	1N3910	1N3911	1N3912	1N3913	MR1396	Unit
Peak Repetitive Reverse Voltage Working Peak Reverse Voltage DC Blocking Voltage	V_{RRM} V_{RWM} V_R	50	100	200	300	400	600	Volts
Non-Repetitive Peak Reverse Voltage	V_{RSM}	75	150	250	350	450	650	Volts
RMS Reverse Voltage	$V_{R(RMS)}$	35	70	140	210	280	420	Volts
Average Rectified Forward Current (Single phase, resistive load, $T_C = 100^\circ\text{C}$)	I_O	← 30 →						Amps
Non-Repetitive Peak Surge Current (surge applied at rated load conditions)	I_{FSM}	← 300 →						Amp
Operating Junction Temperature Range	T_J	← -65 to +150 →						$^\circ\text{C}$
Storage Temperature Range	T_{stg}	← -65 to +175 →						$^\circ\text{C}$

THERMAL CHARACTERISTICS

Characteristic	Symbol	Max	Unit
Thermal Resistance, Junction to Case	$R_{\theta JC}$	1.2	$^\circ\text{C/W}$

*ELECTRICAL CHARACTERISTICS

Characteristic	Symbol	Min	Typ	Max	Unit
Instantaneous Forward Voltage ($I_F = 93$ Amp, $T_J = 150^\circ\text{C}$)	V_F	—	1.2	1.5	Volts
Forward Voltage ($I_F = 30$ Amp, $T_C = 25^\circ\text{C}$)	V_F	—	1.1	1.4	Volts
Reverse Current (rated dc voltage) $T_C = 25^\circ\text{C}$	I_R	—	10	25	μA
$T_C = 100^\circ\text{C}$		—	0.5	1.0	mA

*REVERSE RECOVERY CHARACTERISTICS

Characteristic	Symbol	Min	Typ	Max	Unit
Reverse Recovery Time ($I_F = 1.0$ Amp to $V_R = 30$ Vdc, Figure 16) ($I_{FM} = 36$ Amp, $di/dt = 25$ A/ μs , Figure 17)	t_{rr}	—	150 200	200 400	ns
Reverse Recovery Current ($I_F = 1.0$ Amp to $V_R = 30$ Vdc, Figure 16)	$I_{RM(REC)}$	—	1.5	2.0	Amp

*Indicates JEDEC Registered Data for 1N3909 Series.

NOTE 1

DUTY CYCLE, $D = t_p/t_1$
 PEAK POWER, P_{pk} , is peak of an equivalent square power pulse.

To determine maximum junction temperature of the diode in a given situation, the following procedure is recommended:

The temperature of the case should be measured using a thermocouple placed on the case at the temperature reference point (see Note 3). The thermal mass connected to the case is normally large enough so that it will not significantly respond to heat surges generated in the diode as a result of pulsed operation once steady state conditions are achieved. Using the measured value of T_C , the junction temperature may be determined by:

$$T_J = T_C + \Delta T_{JC}$$

where ΔT_{JC} is the increase in junction temperature above the case temperature. It may be determined by:

$$\Delta T_{JC} = P_{pk} \cdot R_{\theta JC} [D + (1 - D) \cdot r(t_1 + t_p) + r(t_p) - r(t_1)]$$

where

- $r(t)$ = normalized value of transient thermal resistance at time, t , from Figure 3, i.e.:
- $r(t_1 + t_p)$ = normalized value of transient thermal resistance at time $t_1 + t_p$

NOTE 2

Reverse recovery time is the period which elapses from the time that the current, thru a previously forward biased rectifier diode, passes thru zero going negatively until the reverse current recovers to a point which is less than 10% peak reverse current.

Reverse recovery time is a direct function of the forward current prior to the application of reverse voltage.

For any given rectifier, recovery time is very circuit dependent. Typical and maximum recovery time of all Motorola fast recovery power rectifiers are rated under a fixed set of conditions using $I_F = 1.0 \text{ A}$, $V_R = 30 \text{ V}$. In order to cover all circuit conditions, curves are given for typical recovered stored charge versus commutation di/dt for various levels of forward current and for junction temperatures of 25°C, 75°C, 100°C, and 150°C.

To use these curves, it is necessary to know the forward current level just before commutation, the circuit commutation di/dt , and the operating junction temperature. The reverse recovery test current waveform for all Motorola fast recovery rectifiers is shown.

From stored charge curves versus di/dt , recovery time (t_{rr}) and peak reverse recovery current ($I_{RM(REC)}$) can be closely approximated using the following formulas:

$$t_{rr} = 1.41 \times \left[\frac{Q_R}{di/dt} \right]^{1/2}$$

$$I_{RM(REC)} = 1.41 \times \left[Q_R \times di/dt \right]^{1/2}$$

PACKAGE MECHANICAL DATA

DO 5 Metal

Marking : Cathode connected to case : type number

Anode connected to case : type number + suffix R

Weight : 18.84g

Recommended torque value : 250cm. N

Maximum torque value : 310cm. N
