

HSMS-281x

Surface Mount RF Schottky Barrier Diodes

Data Sheet

Lead (Pb) Free
RoHS 6 fully
compliant

Description/Applications

These Schottky diodes are specifically designed for both analog and digital applications. This series offers a wide range of specifications and package configurations to give the designer wide flexibility. The HSMS-281x series of diodes features very low flicker (1/f) noise.

Note that Avago's manufacturing techniques assure that dice found in pairs and quads are taken from adjacent sites on the wafer, assuring the highest degree of match.

Features

- Surface Mount Packages
- Low Flicker Noise
- Low FIT (Failure in Time) Rate*
- Six-sigma Quality Level
- Single, Dual and Quad Versions
- Tape and Reel Options Available
- Lead-free
- For more information see the Surface Mount Schottky Reliability Data Sheet.

Pin Connections and Package Marking

Notes:

1. Package marking provides orientation and identification.
2. See "Electrical Specifications" for appropriate package marking.

Absolute Maximum Ratings^[1] T_C = 25°C

Symbol	Parameter	Unit	SOT-23/SOT-143	SOT-323/SOT-363
I _F	Forward Current (1 μs Pulse)	Amp	1	1
P _{IV}	Peak Inverse Voltage	V	Same as V _{BR}	Same as V _{BR}
T _J	Junction Temperature	°C	150	150
T _{stg}	Storage Temperature	°C	-65 to 150	-65 to 150
θ _{Jc}	Thermal Resistance ^[2]	°C/W	500	150

Notes:

1. Operation in excess of any one of these conditions may result in permanent damage to the device.
2. T_C = +25°C, where T_C is defined to be the temperature at the package pins where contact is made to the circuit board.

ESD WARNING: Handling Precautions Should Be Taken To Avoid Static Discharge.

Electrical Specifications T_C = 25°C, Single Diode^[3]

Part Number HSMS ^[4]	Package Marking Code	Lead Code	Configuration	Minimum Breakdown Voltage V _{BR} (V)	Maximum Forward Voltage V _F (mV)	Maximum Forward Voltage V _F (V) @ I _F (mA)	Maximum Reverse Leakage I _R (nA) @ V _R (V)	Maximum Capacitance C _T (pF)	Typical Dynamic Resistance R _D (Ω) ^[5]

281L	BL	L	Unconnected Trio						
Test Conditions				I _R = 10 μA	I _F = 1 mA			V _F = 0 V f = 1 MHz	I _F = 5 mA

Notes:

1. ΔV_F for diodes in pairs and quads in 15 mV maximum at 1 mA.
2. ΔC_{TO} for diodes in pairs and quads is 0.2 pF maximum.
3. Effective Carrier Lifetime (τ) for all these diodes is 100 ps maximum measured with Krakauer method at 5 mA.
4. See section titled "Quad Capacitance."
5. R_D = R_S + 5.2Ω at 25°C and I_F = 5 mA.

Quad Capacitance

Capacitance of Schottky diode quads is measured using an HP4271 LCR meter. This instrument effectively isolates individual diode branches from the others, allowing accurate capacitance measurement of each branch or each diode. The conditions are: 20 mV R.M.S. voltage at 1 MHz. Avago defines this measurement as "CM", and it is equivalent to the capacitance of the diode by itself. The equivalent diagonal and adjacent capacitances can then be calculated by the formulas given below.

In a quad, the diagonal capacitance is the capacitance between points A and B as shown in the figure below. The diagonal capacitance is calculated using the following formula

$$C_{\text{DIAGONAL}} = \frac{C_1 \times C_2}{C_1 + C_2} + \frac{C_3 \times C_4}{C_3 + C_4}$$

The equivalent adjacent capacitance is the capacitance between points A and C in the figure below. This capacitance is calculated using the following formula

$$C_{\text{ADJACENT}} = C_1 + \frac{1}{\frac{1}{C_2} + \frac{1}{C_3} + \frac{1}{C_4}}$$

This information does not apply to cross-over quad diodes.

Linear Equivalent Circuit Model Diode Chip

R_S = series resistance (see Table of SPICE parameters)

C_J = junction capacitance (see Table of SPICE parameters)

$$R_J = \frac{8.33 \times 10^{-5} \text{ nT}}{I_b + I_s}$$

where

I_b = externally applied bias current in amps

I_s = saturation current (see table of SPICE parameters)

T = temperature, °K

n = ideality factor (see table of SPICE parameters)

Note:

To effectively model the packaged HSMS-281x product, please refer to Application Note AN1124.

ESD WARNING:

Handling Precautions Should Be Taken To Avoid Static Discharge.

Applications Information

Introduction — Product Selection

Avago's family of Schottky products provides unique solutions to many design problems.

The first step in choosing the right product is to select the diode type. All of the products in the HSMS-282x family use the same diode chip, and the same is true of the HSMS-281x and HSMS-280x families. Each family has a different set of characteristics which can be compared most easily by consulting the SPICE parameters in Table 1.

A review of these data shows that the HSMS-280x family has the highest breakdown voltage, but at the expense of a high value of series resistance (R_s). In applications which do not require high voltage the HSMS-282x family, with a lower value of series resistance, will offer higher current carrying capacity and better performance. The HSMS-281x family is a hybrid Schottky (as is the HSMS-280x), offering lower 1/f or flicker noise than the HSMS-282x family.

In general, the HSMS-282x family should be the designer's first choice, with the -280x family reserved for high voltage applications and the HSMS-281x family for low flicker noise applications.

Table 1. Typical SPICE Parameters.

Parameter	Units	HSMS-280x	HSMS-281x	HSMS-282x
B_V	V	75	25	15
C_{J0}	pF	1.6	1.1	0.7
E_G	eV	0.69	0.69	0.69
I_{BV}	A	1 E-5	1 E-5	1 E-4
I_S	A	3 E-8	4.8 E-9	2.2 E-8
N		1.08	1.08	1.08
R_S	Ω	30	10	6.0
$P_B (V_J)$	V	0.65	0.65	0.65
$P_T (X_{TI})$		2	2	2
M		0.5	0.5	0.5

Assembly Instructions

SOT-323 PCB Footprint

A recommended PCB pad layout for the miniature SOT-323 (SC-70) package is shown in Figure 6 (dimensions are in inches). This layout provides ample allowance for package placement by automated assembly equipment without adding parasitics that could impair the performance.

Figure 6. Recommended PCB Pad Layout for Avago's SC70 3L/SOT-323 Products.

Assembly Instructions

SOT-363 PCB Footprint

A recommended PCB pad layout for the miniature SOT-363 (SC-70, 6 lead) package is shown in Figure 7 (dimensions are in inches). This layout provides ample allowance for package placement by automated assembly equipment without adding parasitics that could impair the performance.

Figure 7. Recommended PCB Pad Layout for Avago's SC70 6L/SOT-363 Products.

Reliable assembly of surface mount components is a complex process that involves many material, process, and equipment factors, including: method of heating (e.g., IR or vapor phase reflow, wave soldering, etc.) circuit board material, conductor thickness and pattern, type of solder alloy, and the thermal conductivity and thermal mass of components. Components with a low mass, such as the SOT package, will reach solder reflow temperatures faster than those with a greater mass.

After ramping up from room temperature, the circuit board with components attached to it (held in place with solder paste) passes through one or more preheat zones.

The rates of change of temperature for the ramp-up and cool-down zones are chosen to be low enough to not cause deformation of the board or damage to components due to thermal shock. The maximum temperature in the reflow zone (T_{MAX}) should not exceed 260°C.

These parameters are typical for a surface mount assembly process for Avago diodes. As a general guideline, the circuit board and components should be exposed only to the minimum temperatures and times necessary to achieve a uniform reflow of solder.

Reflow Parameter		Lead-Free Assembly
Average ramp-up rate (Liquidus Temperature ($T_{S(max)}$) to Peak)		3°C/ second max
Preheat	Temperature Min ($T_{S(min)}$)	150°C
	Temperature Max ($T_{S(max)}$)	200°C
	Time (min to max) (t_s)	60-180 seconds
Ts(max) to TL Ramp-up Rate		3°C/second max
Time maintained above:	Temperature (T_L)	217°C
	Time (t_L)	60-150 seconds
Peak Temperature (T_p)		260 +0/-5°C
Time within 5 °C of actual Peak temperature (t_p)		20-40 seconds
Ramp-down Rate		6°C/second max
Time 25 °C to Peak Temperature		8 minutes max
