## Field-effect current regulator silicon diodes

### FEATURES

- High impedance
- Regulator current from 0.22 to 4.7 mA
- Usable voltage range from a minimum limit of 1.0 to 2.5 V
- Hermetically sealed glass package

### MAXIMUM RATINGS

- Junction Temperature: -55°C to +200°C
- Storage Temperature: -55°C to +200°C
- DC Power Dissipation: 600mW,  $T_L < 75^\circ\text{C}$
- Derate above 75°C: 4.8 mW/°C
- Peak Operating Voltage: 100 V (from  $T_J = -55^\circ\text{C}$  to +200°C)

Field-effect current regulator diodes are silicon circuit elements that provide an essentially constant current independent of voltage. These high impedance "constant current diodes" complement the "constant voltage" of silicon zener diodes. This series is especially designed for maximum impedance over the operating range. Currents are available from 0.22 to 4.7 mA, with usable voltage range from a minimum limit of 1.0 to 2.5 V, up to a compliance of 100 V. They may be used in parallel to obtain higher currents.

### ELECTRICAL CHARACTERISTICS @ $T_A = 25^\circ\text{C}$

Type No.	Regulator Current $I_p$ (mA) @ $V_T = 25^\circ\text{C}$			Minimum Dynamic Impedance @ $V_T = 25^\circ\text{C}$ $Z_V$ (MΩ)	Minimum Knee Impedance @ $V_G = 0.0$ V $Z_K$ (MΩ)	Max./min Limiting Voltage @ $I_L = 0.8 I_p$ (mA) $V_L$ (VDC)

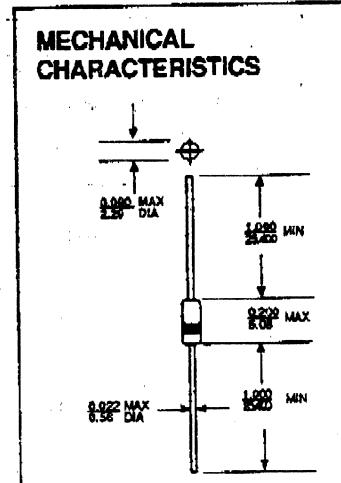

FIGURE 1 all dimensions in INCH mm

CASE: Hermetically sealed glass package (DO-35)

FINISH: Corrosion resistant.  
Leads are tin plated.

THERMAL RESISTANCE:  
175°C/W junction to lead at 0.375-inches from body

POLARITY: Cathode banded.  
WEIGHT: 0.2 grams (typ).
