

# RF POWER MOSFET N-CHANNEL PUSH - PULL PAIR

Common Source Push-Pull Pair

165V 400W 100MHz

The ARF477FL is a matched pair of RF power transistors in a common source configuration. It is designed for high voltage push-pull or parallel operation in narrow band ISM and MRI power amplifiers up to 100 MHz.

• Specified 150 Volt, 65 MHz Characteristics:

Output Power = 400 Watts Gain = 15dB (Class AB) Efficiency = 50% min

- High Performance Push-Pull RF Package.
- High Voltage Breakdown and Large SOA for Superior Ruggedness.
- Low Thermal Resistance.
- RoHS Compliant

# **MAXIMUM RATINGS**

All Ratings:  $T_C = 25$ °C unless otherwise specified.

# Thermal Considerations and Package Mounting:

The rated power dissipation is only available when the package mounting surface is at 25°C and the junction temperature is 175°C. The thermal resistance between junctions and case mounting surface is 0.23 °C/W. When installed, an additional thermal impedance of 0.07°C/W between the package base and the mounting surface is typical. Insure that the mounting surface is smooth and flat. Thermal joint compound must be used to reduce the effects of small surface irregularities. Use the minimum amount necessary to coat the surface. The heatsink should incorporate a copper heat spreader to obtain best results.

The package design clamps the ceramic base to the heatsink. A clamped joint maintains the required mounting pressure while allowing for thermal expansion of both the base and the heat sink. Four 4-40 (M3) screws provide the required mounting force. T = 6 in-lb (0.68 N-m).

### HAZARDOUS MATERIAL WARNING

The white ceramic portion of the device between leads and mounting surface is beryllium oxide, BeO. Beryllium oxide dust is toxic when inhaled. Care must be taken during handling and mounting to avoid damage to this area. These devices must never be thrown away with general industrial or domestic waste.
