

Hermetic Infrared Emitting Diode

OP230 Series

Features:

- Focused and non-focused optical light pattern
- Enhanced temperature range
- TO-46 hermetically sealed package
- Mechanically and spectrally matched to other OPTEK devices
- Choice of power ranges
- Choice of narrow or wide irradiance pattern

Description:

Each device in this series is a gallium aluminum arsenide (GaAlAs) infrared emitting diode, mounted in a hermetic metal TO-46 housing. The gallium aluminum arsenide feature provides a higher radiated output than gallium arsenide at the same forward current.

Each **OP231**, **OP232**, **OP233**, **OP234** and **OP235** device is lensed to provide a narrow beam angle (18°) between half power points. The 890 nm wavelength closely matches the spectral response of silicon phototransistors, while the narrow beam angle – combined with the specified radiant intensity of the OP231 series – facilitates easy design in beam interrupt applications in conjunction with the OP800 or OP598 series photosensors. *The OP231 series is mechanically and spectrally matched to OP800, OP593 and OP598 phototransistors.*

Each **OP231W**, **OP232W**, **OP233W**, **OP234W** and **OP235W** device is lensed to provide a wide beam angle (50°) between half power points. The 890 nm wavelength closely matches the spectral response of silicon phototransistors, while the wide beam angle provides relatively even illumination over a large area. *The OP231W is mechanically and spectrally matched to the OP800WSL and OP830SL series devices.*

Please refer to Application Bulletins 208 and 210 for additional design information and reliability (degradation) data.

Custom electrical, wire and cabling and connectors are available. Contact your local representative or OPTEK for more information.

Applications:

- Non-contact reflective object sensor
- Assembly line automation
- Machine automation
- Machine safety
- End of travel sensor
- Door sensor

Ordering Information				
Part Number	LED Peak Wavelength	Output Power (mW/cm ²) Min / Max	Total Beam Angle	Lead Length
OP231	890 nm	1.5 / NA	18°	0.50"
OP232		2.0 / 6.0		
OP233		3.0 / NA		
OP234		5.0 / NA		
OP235		6.0 / NA		
OP231W		1.5 / NA	50°	
OP232W		3.5 / 7.0		
OP233W		5.0 / NA		
OP234W		5.0 / NA		
OP235W		6.0 / NA

Hermetic Infrared Emitting Diode

OP230 Series

Absolute Maximum Ratings ($T_A=25^\circ\text{C}$ unless otherwise noted)

Storage Temperature Range	-65° C to +150° C
Operating Temperature Range	-65° C to +125° C
Reverse Voltage	2.0 A
Continuous Forward Current	100 mA
Peak Forward Current	10.0 A
Lead Soldering Temperature [1/16 inch (1.6 mm) from case for 5 seconds with soldering iron]	260° C ⁽¹⁾⁽²⁾
Power Dissipation	200 mW ⁽³⁾

Electrical Characteristics ($T_A = 25^\circ\text{C}$ unless otherwise noted)

Notes:

1. RMA flux is recommended. Duration can be extended to 10 seconds maximum when flow soldering.
2. Derate linearly 2.0 mW/° C above 25° C.
3. Measurement made with 100 μs pulse measured at the trailing edge of the pulse with a duty cycle of 0.1% and an $I_F = 100\text{ mA}$.
4. For the OP231 series, $E_{E(APT)}$ is a measurement of the average radiant intensity within the cone formed by the measurement surface, a radius of 1.429" (36.30 mm) measured from the lens side of the tab to the sensing surface and a sensing surface of 0.250" (6.35 mm) in diameter forming a 10° cone. For the OP231W series, $E_{E(APT)}$ is a measurement of the average radiant intensity within the
