

PRODUCT DATA SHEET

High Brightness Neon Lamp	16/50HB
----------------------------------	----------------

OUTLINE DRAWING

All dimensions in mm

Drawing not to scale

OPERATING DATA

Type	Brightness	Nominal Current	Maximum Striking Voltage	Recommended Series Resistor Value		Life Expectancy (ac operation)
				110 - 120V (ac only)	220 - 250V (ac or dc)	
16/50HB	High	1.8mA	95Vac	33 K-ohm	100 K-ohm	10,000 hours

Operating temperature: - 50⁰C to + 160⁰C

Life expectancy is average time to half-initial light output level at nominal current.

Current may be increased or decreased from the nominal value, when the life expectancy will vary according to a 3.3 power law:

$$L_2 = L_1 \left(\frac{I_1}{I_2} \right)^{3.3}$$

Neon lamps should not be operated at more than twice the nominal current.

Operation at currents below the nominal value may result in the discharge becoming unstable (i.e. lamps flicker).
