## Features:

- High intensity
  Standard T-1 diameter package

Specifications:

- Lead spacing is measured where the leads emerge

from the package

- General purpose LED
- Reliable and rugged

### Notes:

- Luminous intensity is measured with a light sensor and filter combination that approximates the CIE eye—response curve.
- $2-\theta_{1/2}$  is the off-axis angle at which the luminous intensity is half the axial luminous intensity
- 3- The dominant wavelength ( $\lambda d$ ) is derived from the CIE chromaticity diagram and represents the single wavelength which defines the color of the device.
