

The Global tvLINK system allows viewing of high quality Sky satellite, terrestrial and video pictures at a second location. With the added benefit of control, the tvLINK gives the viewer the sense of having a second Sky Digibox.

On a typical installation, the Sky Digibox is located in the living room with a second set being either in the kitchen or bedroom. This means it is possible for the main location to be watching a terrestrial channel i.e. BBC1, while the second location watches a Sky channel, i.e. Sky Sports or Sky One.

The tvLINK picks up the remote control signal and sends it via a coax cable back to the Sky Digibox, where it is decoded internally. This allows the tvLINK to be discreet and unobtrusive in operation.

- SKY approved
- Discreet, modern design
- Simple installation
