Today!**

**Adaptive Technology • Dual Technology  
Ultrasonic • Passive Infrared**

Wiring Device-Kellems

## H-MOSS® Occupancy Sensors feature the latest in technological advances.

### Adaptive Technology

Adaptive Technology is a Hubbell breakthrough that delivers benefits to the building owner and occupants. The building owner gets reduced energy costs, fewer adjustments and less maintenance. The building occupant experiences fewer false-offs, disturbances and lower energy costs.

Adaptive technology sensors use microprocessor-based technology which makes all the decisions for setting adjustments. Internal software constantly monitors the controlled area and automatically adjusts the sensitivity and timer based on environmental history. This means that instead of manually adjusting the sensor for seasonal changes, modified airflow, and furniture layout or occupancy pattern changes, the sensor will automatically adjust itself. These automatic adjustments will eliminate the need for multiple adjustments by maintenance, personnel or outside contractors.

Hubbell offers adaptive technology throughout its product offering (wall switches, ceiling and wall mount sensors) in conjunction with dual technology (ultrasonic and passive infrared), ultrasonic, and passive infrared products.

### Dual Technology

Dual technology occupancy sensors use both passive infrared and ultrasonic technologies for maximum reliability. These sensors also minimize the risk of false triggering (lights coming on when the space is unoccupied). Both ultrasonic (US) and passive infrared (PIR) technologies must detect occupancy to turn lighting on, while continued detection by only one technology will keep lighting on. The dual technology sensors are the best performing sensor for most applications.

### Ultrasonic (US)

Ultrasonic technology senses occupancy by bouncing ultrasonic sound waves (32kHz - 45kHz) off objects in a space and detecting a frequency shift between the emitted and reflected sound waves. Movement by a person or object within the space causes a shift in frequency, which is interpreted as occupancy. Ultrasonic occupancy sensors are good at detecting minor motion (e.g. typing, reading) and do not require an unobstructed line-of-sight, thus making them suitable for applications such as an office with cubicles or a restroom with stalls.

### Passive Infrared (PIR)

Passive Infrared (PIR) technology senses occupancy by detecting the difference between heat emitted from the human body and the background space. PIR sensors require an unobstructed line-of-sight for detection. These sensors utilize a segmented lens, which divides the coverage area into zones. Movement between these zones is interpreted as occupancy. PIR sensors are good at detecting major motion (e.g. walking) and work best in small, enclosed spaces with high levels of occupant movement.

## Typical Applications

**Wall Switch**

**Ceiling Sensor**

**Wall Sensor**

Applications are generalized. Consult your Hubbell representative for the type of technology and products that fit your needs.

Location	Passive Infrared (PIR)	Ultrasonic	Dual Technology	Sensor Style
Bedroom	✓			1 2
Cafeteria	✓	✓		1 2
Closet	✓	✓		1
Conference Room		✓	✓	1 2 3
Classroom		✓	✓	2
Lecture Hall			✓	2
Library		✓		2

Rest Room (multi-stall)		✓	✓	1 2
Private Office	✓	✓	✓	1 2
Storage	✓	✓		1 2 3
Lobby	✓		✓	1 2 3
Warehouse	✓			3

## Occupancy Sensors = Energy Savings

For many years, occupancy sensors have been highlighted as a way to reduce energy consumption. The California Department of Energy has stated that lighting accounts for 35-45% of an office buildings energy use.

As seen in the chart, occupancy sensors can potentially reduce lighting use by 13-90%. In a large office building, for example, occupancy sensors can be an excellent way of reducing energy costs for both building operators and tenants.

## Potential Energy Savings Using Occupancy Sensors

## Return on Investment (ROI)

Occupancy sensors can save a building operator or tenant money, but what is the return on investment (ROI) for a capital expenditure of this nature? Hubbell has developed a tool, the H-MOSS<sup>®</sup> ROI Worksheet, that can be accessed from the Hubbell website, [www.hubbell-wiring.com](http://www.hubbell-wiring.com), or from a Hubbell representative. This simple-to-use worksheet helps calculate present annual energy costs without sensors and estimated annual costs with sensors. The savings and short payback time can be surprising.

As energy costs continue to climb, standards and codes become more stringent, and the “greening” of commercial and residential buildings increases across the country, you should look toward Hubbell Occupancy Sensors to help decrease your energy costs.

## H-MOSS<sup>®</sup> ROI Worksheet

**H-MOSS<sup>®</sup> Occupancy Sensors Return on Investment (ROI) Calculation Worksheet**

# Lamps	Watts Per Lamp	Total Watts / 1000	Total kWh	Utility Rate Per kWh	Annual Operating Hours	% Savings	Annual Savings
1	100	0.1	0.876	0.10	8760		\$87.60
2	100	0.2	1.752	0.10	8760		\$175.20
3	100	0.3	2.628	0.10	8760		\$262.80
4	100	0.4	3.504	0.10	8760		\$350.40

Annual Savings	Material Costs	Labor Costs	Payback in Months**
\$0.00			#DIV/0!

\* Fluorescent Lamps, Incandescent Lamps, CFLs, Task Lighting  
 \*\* Total savings of Return including Inflation  
 \*\*\* Payback in months = Material Cost + Labor Cost / Annual Savings

## Layout Capabilities and Technical Support

Hubbell representatives are available to meet and discuss any project, large or small. We can provide an occupancy sensors layout based on blueprints, either in electronic or paper form and a bill of material (BOM). All questions can be addressed by our technical service group that is always available.

# Reduce Energy

## **Reduce Energy Consumption and Meet Federal and State Standards and Guidelines**

Reduction of energy consumption at all levels: local, state and national is critical. Today's buildings, both commercial and residential - new and renovated - must follow new state and federal standards and codes which call for energy efficiency throughout a facility.

### **LEED**

LEED (Leadership in Energy and Environmental Design) which is sponsored by the U.S. Green Building Council (USBC) has created a rating system to define what constitutes a green building by establishing common standards of measurement, and promoting integrated and whole building design. This certification applies to both new and renovated commercial buildings. Points are awarded by category and there are four levels of certification- certified, silver, gold and platinum.

**H-MOSS, Hubbell Motion Sensor Switches** offer a large array of occupancy sensors, which can be utilized to help increase energy efficiency in the following categories:

### **LEED Credit Categories**

Sustainable Sites- SS  
Light pollution reduction

Energy and Atmosphere- EA  
Optimize energy performance

Indoor Environment Quality- EQ  
Controllability of systems, lighting

Innovation & Design Process- ID  
Innovation in design

## **ASHRAE/IESNA 90.1 Standard**

Among the requirements in this standard is that a building of 5,000 sq. ft. or more, except for lighting operated 24 hours per day, must incorporate automatic control devices to turn off all lighting.

## **IECC 2003 Lighting Control Provision**

The International Energy Conservation Code (IECC) which has been adopted by some states, affects new construction, additions and alterations for all commercial buildings, including residential structures with four or more stories above grade. It requires an automatic shutoff of all lighting for buildings larger than 5,000 sq. ft. with occupancy sensors as one way to achieve this goal.

## **California Energy Commission (CEC) Title 24 Program**

California's Title 24 Program sets up some of the most stringent standards and regulations in the country to reduce energy consumption in both commercial and residential structures.

### **Some of the key provisions are:**

#### **Multi-level lighting control**

Any enclosed space 100 sq. ft. or larger which has a connected lighting load that exceeds 0.8 watts per sq. ft. and has more than one light source (luminaire) shall be controlled so that the load for lights may be reduced by a minimum of 50%.

#### **Area controls**

Each area enclosed by ceiling height partitions must have an independent switching or control device- occupancy sensor or manual switch.

#### **Automatic shut-off controls**

For every floor, all indoor lighting must have a separate automatic control, capable of automatically shutting off the lighting.

#### **Residential buildings**

In 2005, Title 24 simplified and expanded the standard to include use of high efficacy luminaires, manual-on occupancy sensors, fluorescent lights or dimmers in most rooms of the home such as bedrooms, bathroom, garage, living room, hallway, and utility room.

Hubbell offers many models of occupancy, vacancy and dimmers (all CEC Title 24 compliant) that will enable builders, contractors and homeowners to meet these new requirements.

# H-MOSS® Wall Switches Featuring Adaptive Technology

All H-MOSS Wall Switches with Adaptive Technology featured below have the following standard features:

- Adaptive technology - “Install and forget” operation
- All digital sensing technology
- Dual 120/277V AC operation
- Auto or manual “On” operating modes
- No minimum load requirements
- Hard lens (dual technology, passive infrared)
- Zero arc point switching
- Built in photocell with manual super saver mode for daylight harvesting
- Two relays for two level switching or dual load control (AD, AP AU1277x2, 2N series)
- C-UL US

## Adaptive Technology, Dual (Ultrasonic and Passive Infrared)

50/60Hz, 1000 sq. ft. coverage with photocell, 800W Incandescent, 1000W Fluorescent at 120V AC, 1800W Fluorescent at 277V AC

# H-MOSS® Ceiling Sensors Featuring Adaptive Technology

All H-MOSS ceiling sensors with Adaptive Technology contain the following standard features:

- Adaptive Technology- “Install and forget”
- All digital sensing technology
- Photocell for daylight harvesting and relay to interface with auxiliary systems such as HVAC (CRP models)
- Non-volatile memory- learned and adjusted settings retained after power outage
- 24V DC, 33mA
- 32kHz (ATD/ATU500C & CRP - 400kHz)
- Mounting base included with sensor

## Adaptive Technology, Dual (Ultrasonic and Passive Infrared)

Combines the excellent minor motion detection of ultrasonic with the outstanding passive infrared (PIR) long-range major motion detection

Coverage	Color	Catalog Numbers

## Control Units

Hubbell CU series control units provide a 24V DC power supply for 1 to 3 sensors or sensor/Add-A-Relay combinations. The CU300A provides a 24V DC power supply for 1 to 4 sensors or sensor/Add-A-Relay combinations. The control units contain an internal relay for the control of an external lighting load. All control units are plenum rated.

Description	Catalog Numbers
120/277V AC, 50/60 Hz for use with ATD, ATU and ATP series ceiling sensors and wall mount sensors	<b>CU300A</b>
347V AC, 60 Hz, for use with ATD, ATU and ATP series ceiling and wall mount sensors	<b>CU347A</b>

**CU347A, CU300A**

**AAR**

## Add-A-Relay

Hubbell AAR Add-A-Relay contains an internal relay for control of an external lighting load. The AAR requires a 24V DC power supply from the Hubbell CU series control unit. The AAR is typically used when: 1. It is desired to switch more than one circuit when occupancy is sensed. 2. The lighting load exceeds the maximum rating of the control unit.
