Industrial Flashing Filament Beacons > FF125 Series

Product overview

The FF125 series operates through an internal circuit which simply cycles the lamp On and Off. These type of beacons generally give a much lower light output as it takes longer for the lamp to fully illuminate itself. These units are supplied with a filament lamp. In terms of light coverage, this type of beacon is more efficient as it illuminates the whole surface of the beacon constantly through 360 degrees. The FF125 series is ideal for low cost, local signal applications.
