

# EC centrifugal blower

Dual inlet, Ø 133, linear control 0-10 V / PWM

- **Material:** scroll housing and impeller made of galvanised sheet steel
- **Technical Features:** electronics integrated in the motor, PWM/linear input, alarm relay
- **Bearings:** maintenance-free ball bearings
- **Direction of rotation:** clockwise
- **Mounting:** either SAL (standard external-rotor) motor mounted via brackets on one side of the scroll housing, or, EW-motor anti-vibration mounted on both sides.

## ECi Controllers

General remarks: ECi controllers are designed for use with the full range of ebm-papst ECi (Electronically Commutated with integrated electronics) fans, they are powered via the DC output from the fan and provide a 0-10V signal to enable infinitely variable speed control. The controllers also enable speed measurement of the fan using a multimeter with a frequency measuring facility ( where a tachometer output is provided from the fan).

Specification: Input voltage 10 VDC (supplied from fan); Maximum ambient temperature 50°C; CN1003 controller: Mounting hole diameter 10mm; Output voltage range 0-10 VDC. RM-ECi controller: IP rating IP54; cable entries 4 x M16 or M20; mounting holes suitable for 4mm fixing; Output voltage range 0-10 VDC.

## Wiring details

## Installation

- 1) Install in a dry sheltered position. Do not install in close proximity to heat sources
- 2) The maximum ambient temperature of the controller must not exceed 50°C

## Speed measurement

Connect a multimeter set to measure frequency on the probe points (marked + and -) on the PCB. The fan provides 1 pulse per revolution so the measured frequency can be converted to rpm using the following equation:

$$\text{RPM} = \text{Frequency (Hz)} \times 60$$

### Notes:

- 1) A single controller can be used to control multiple fans at the same speed setting
- 2) Connection to the controller is via four screw terminals or a Molex connector (range of connection leads available)
- 3) When the tacho wire is required this can only be connected to one fan (see note A).

### Note A

Please note that under rare operating conditions it is possible that leaving the tacho wire permanently connected may lead to a small reduction in the maximum speed.
