KRONE LSA-PLUS® 200 & 220 Series Connection Boxes

KRONE LSA-PLUS® 200 & 220 Series Connection Boxes

Features and Benefits

KRONE LSA-PLUS® 200 and 220 Series boxes are a range of modular, internal distribution boxes for voice communications cabling schemes. The 200 Series provides capacity for up to 20 pairs and the 220 Series for up to 30 pairs.

Modular design for increased flexibility

Modular design allows customisation to suit a wide range of applications and offers potential cost savings through reduced inventory. The 220 Series can be used either as a standard distribution box, using KRONE LSA-PLUS® 10 pair Disconnection Modules, or when fitted with 10 Pair IDC-To-Screw Terminal Modules, provide a network termination and test point.

■ Compact design

Designed to be unobtrusive and to mount in areas where space is at a premium.

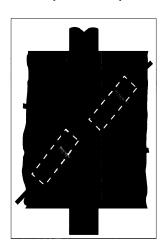

Disconnection and test facility

All boxes offer full disconnection and test facilities. KRONE LSA-PLUS® 10 pair Disconnection Modules allow rapid disconnection of individual pairs and permit "look-both-ways testing" without disruption to wiring.

■ Rapid installation

Boxes are simple and quick to install, featuring integral jumper rings and cable knock-outs.

■ Part of the extensive KRONE LSA-PLUS® range 200 and 220 Series boxes can be used with a wide range of KRONE Accessories. The 220 Series accommodates over-voltage protection using the KRONE LSA-PLUS® 10 Pair Protector Magazine and tamper proof fixings are available to provide additional safety and security.

The KRONE Difference

- Insulation clamping ribs hold the wire securely and isolate the contact area from vibration and mechanical stress.
- Silver plated contacts arranged at 45 degree angles to the axis of the wire make a solid gas tight connection.
- Unique axial and torsional restoring forces maintain a durable connection.
