### Description

Charleswater Europe's ESD Fingertip Pumps are dispensers that can be used for liquids needed at a workbench. They are available in either black conductive or blue dissipative HDPE 177mL bottles. The One-Touch Pump dispenses only the desired fluid into the reservoir in the cap. the Pure Touch Pump also inhibits cross-contamination by preventing fluids from returning into the dispenser. These fingertip pumps are antistatic and low tribocharging for minimal charge generation. The stainless steel pump is non-corrosive and the precision valve prevents contamination and spills.
