

GYRO AND PRESSURE SENSORS EVALUATION PLATFORM (EVP)

Features

- PC software
- Data presentation and log to file capability
- EVP PCB with sensor
- USB cable
- Onboard μ C to sensor interface access
- Satellite PCBs available
- Source codes, schematics and layouts available
- User manual

Description

Gyro and pressure sensors evaluation platform (EVP) provides rapid measurement and evaluation access to gyro and pressure sensors from Sensoror Technologies. Measurement results are presented in PC software and written to file (optional). Power supply and communication is provided by USB. (USB cable included.)

A number of signals are made available on header pin rows for purpose of monitoring and test (e.g. for confirming SPI timing between micro controller and sensor).

Add-on satellite PCBs, with or without sensors, are available. Sources codes, schematics and layouts are available.
