

3P-X-DIAG-X-N1 Vehicle Tracking & Diagnostic Node

The 3P-X-DIAG-X-N1 provides an instant out-of-the-box solution to rapidly gain knowledge of on-board diagnostic information of vehicles.

This **accelerates** the investigation and research into vehicle usage patterns and fuel economy.

The 3P-X-DIAG-X-N1 Vehicle Diagnostic single node is available for HGV or LCV:

3P-X-DIAG-1-N1 (HGV) 3P-X-DIAG-2-N1 (LCV/cars)

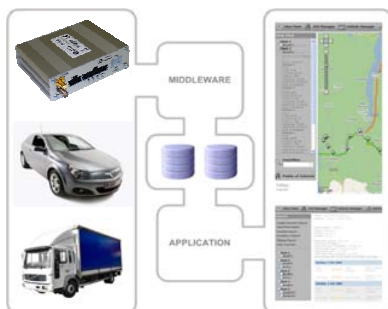

Allow for rapid evaluation and deployment of a professional, complete, end-to-end GPRS enabled solution with the ability to report elements of **CAN/OBD** information over an included modem link to a web based application. Your node comes pre-configured with a data-enabled cellular SIM card.

Assists in the understanding of the true cost of running your vehicle fleet, helps identify where changes can be made to **driver behaviour** or **patterns of work** and thus provide real return on investment (ROI) benefits such as **fuel and maintenance savings**.

Nodes are supplied with an SLA (service level agreement) and terms and conditions sign-up required at activation via a web page, these cover fair usage on the Cellular Network SIM, support and web application access.

The 3P-X-DIAG-X-N1 nodes are available separately or as part of the 3P-X-DIAG-X-L Diagnostic Experience kits. Please contact our sales team to discover the advantages of gaining a head-start from one of our kits.

Two nodes are available, one targeted at HGV (J1939/FMS) and the other for light commercial vehicles (including cars) E-ODB/J1979. Dependant on vehicle type the unit will self scan and configure, although there may be a need for assistance with some vehicles to ensure that the right data is collected.

- Ready to work "out-of-the-box"
- Complete end-to-end professional system
- SIM included
- Most vehicle types covered
- HGV and LCV (including cars) versions
- Expandable
- Support packages and installation assistance available

3P-DIAG-1-N1: Accessory Parts
