

## high deflection no-snag, fold-under

**WITH ADHESIVE MOUNT.** For applications requiring low compression force. Designed with a minimum residual stress and highly leveraged spring action. The free end features a fold-under lip which facilitates a low coefficient of friction on most surfaces. Allows a minimum of compressive force to move through the deflection range, resulting in the highest levels of shielding effectiveness with a minimum force.

Extremely high endurance life. Installs easily with standard Very High Bond adhesive.
