

# Passive filter

**General remarks:** Harmonic distortion is more prevalent today with the rise in use of electronic equipment. All electronic equipment that converts AC to DC will distort the mains supply to some degree. Passive power factor correction can correct up to 0.8 depending on the load.

- Passive power factor correction filter
- 230V 50/60 Hz
- 3 Amps

Type	Supply voltage VAC	Current Draw A	Max. ambient °C	Mass g
