- 1) Test Parameters: 100KHz, 1.0Vrms
  - 2) I<sub>rms</sub> Amperes for approximately  $\Delta T$  of 40°C above 85°C ambient
  - 3) I<sub>sat</sub> Amperes Peak for approximately 15% rolloff (@20°C)
  - 4) I<sub>sat</sub> Amperes Peak for approximately 30% rolloff (@20°C)
  - 5) Applied Volt-Time product (V- $\mu\text{S}$ ) across the inductor. This value represents the applied V- $\mu\text{S}$  at operating frequency necessary to generate additional core loss which contributes to the 40°C temperature rise. De-rating of the I<sub>rms</sub> is required to prevent excessive temperature rise. The 100% V- $\mu\text{S}$  rating is equivalent to a ripple current I<sub>p-p</sub> of 20% of I<sub>sat</sub> (30% rolloff option).
- It is recommended that the temperature of the part not exceed 155°C under worst case operating conditions verified in the end application.

Units supplied in tape and reel packaging. 13" reels 610 parts per reel. Carrier tape width = 24 mm. Meets EIA standard
