

## Enamelled Wirewound Power Resistors Axial Leads

### FEATURES

- High dissipation up to 30 W (25 °C)
- Fire proof
- Excellent endurance typical drift  $\pm 1.5\%$  after 1000 h
- Conformal vitreous enamel
- All welded construction
- Low ohmic values 0.1  $\Omega$  available
- Termination: Sn/Ag/Cu
- Compliant to RoHS directive 2002/95/EC

**RoHS**  
COMPLIANT

As a result of more than 50 years of experience and continuous improvements the RWM Series of resistors features proven reliability in AC or DC applications.

The high quality of the RWM resides mainly in the use of a proprietary Vishay Sfernice enamel fired at high temperature and free from any compound liable to corrode the resistive wire.

The performance of this series of professional resistors fully meets the requirements of the following specifications:

- NF C 83-210-001
- CECC 40201-001
- BS - CECC 40201-002

### OVERLOAD

Heavy overloads can be endured in the form of short pulses < 0.1 s. Particular requirements should be submitted to Vishay Sfernice, specifying peak voltage, cycle and environmental conditions.

### RECOMMENDATIONS FOR USE

Since these components are high dissipation power resistors, customers are advised to use a high melting point solder.

For low ohmic values, the measurement becomes critical and the connecting wires resistance is to be included. The value is measured at 5 mm from the resistor body.

### Group Mounting

In a still atmosphere, a distance between axes equal to five times the resistor's diameter is recommended.

### Cabinet Mounting

- Unventilated box: Dissipation should be reduced (see dimensional drawing).
- Forced ventilation: If conditions are appropriate, dissipation may be doubled or even trebled.
- In any case: The surface temperature at the hottest point should not exceed 450 °C.

These aspects should be considered by the end user.
