... PROCESS DISPLAY PROBLEMS?

solve it™ here!

Take the Right Action at the Right Time

The increased speed demanded by growing productivity goals makes your operators' decision skills more critical than ever. They need clearly displayed information at real-time speed to respond effectively. Omron's operator interface terminals let you control and access critical information from a single point to help operators stay on top of your process. The graphic and message development software to support the terminals has a short learning curve so your application will be ready sooner for commissioning. Omron's NT-series operator interface terminals offer the right solution at the right time.

Choose an Experienced Partner

With over 65 years of experience manufacturing industrial controls, Omron brings the know-how and reliable products to help you solve tough production problems. Whether you choose to use Omron operator interface terminals with Omron programmable controllers or with those from other manufacturers, we can work with you to develop a flexible and cost-effective system that responds to your current and future needs. Expertise in packaging, material handling, electronics and small parts assembly, food and beverage, semiconductor manufacturing and other specialized applications makes Omron an experienced partner well-qualified to help with your project.

World Recognized Versatility and Support

Omron products represent the best value in capabilities for the investment. Our product designs meet international safety ratings (UL, CE) to speed certification of machinery for commissioning or export. Easy-to-use, multilingual display capabilities and translation utility in the development software give you advantages in providing information to operators in their local language without having to modify the graphics to accommodate each language. With global sales and support that provide spare parts and service locally, you can confidently design in Omron operator interface terminals for machinery going all over the globe.

Strong Products and Intuitive Software Combine for Great Performance

- Wide selection of touch screens and function key models include everything from simple touch switches, lamps, bar graphs and text to models that handle animation, recipes, trend graphs and background math calculation.
- Easy-to-use graphical development software NT-Series Support Tool provides a Windows®-based environment with menu driven, drag-and-drop programming. Manage project screens and tables from a convenient tree menu. Many features shorten debugging time to shorten startup.
- Get more live area and less bezel with Omron's NEMA 4 touch screens for efficient use of panel real estate. Shallow mounting depth of less than 2 inches allows thinner panel designs.
- Rigorous testing every step of the way ensures smooth installation and commissioning. Firmware programming, communications drivers and hardware are tested individually and in combination for flawless performance. Each terminal undergoes thermal, noise, vibration and shock testing to withstand extreme conditions defined in our specifications.
- Versatile communications, faster updates provide the flexibility you need to get information to operators. Omron's NT Link protocol provides high-speed serial transmission (up to 115k baud) for one or multiple terminals and one PLC. Create screen programs that do not require modification across multiple PLC platforms using the DeviceNet communications capability. Memory Link protocol allows the terminal to communicate with a serial port on a PC or custom board.

Technical Highlights

NOTE: Throughout this catalog, many of the product dimensions are shown in both millimeters and inches. When both are not shown, divide millimeters by 25.4 to calculate inches.

NOTE: Specifications subject to change without notice.

Warranty: Omron certifies all of its products either meet or exceed stipulated specifications one year from the date of purchase. Omron is not liable for stenographic and/or clerical errors.

Omron's obligation under this warranty is limited solely to repair or replacement at Omron's discretion. Omron will not be liable for any design furnished by Buyer and incorporated into equipment.

This warranty is voided if the product is altered in any way or suffers consequential damage due to negligence or misuse.

Omron is not to suffer risk due to the suitability or unsuitability or the results of the use of its products used in combination with any electrical or electronic components, circuits, systems, assemblies or any other materials or substances or environments.

The foregoing warranty is the only warranty which Omron Electronics LLC provides with respect to the products listed herein. No other warranties, expressed, implied or statutory shall apply, whether as to merchantability, fitness for a particular purpose, description, or otherwise.

Limitation of Liability: Notwithstanding any other statement herein, Omron Electronics LLC, its contractors and suppliers shall not be liable for any special, indirect, incidental or consequential damages. The remedies of the purchaser set forth herein are exclusive where so stated, and the total cumulative liability of Omron Electronics LLC, its contractors and suppliers, with respect to this contract or anything done in connection therewith, shall not exceed replacement price reimbursement as to the product on which such liability is based.

NT-Series Support Tool Graphic Development Software

- Drag-and-drop, windowed workspace
- Import I/O and comments from CX-Programmer
- Translation Support Utility to manage a project in multiple languages
- Simulation of the ON/OFF states for control objects
- Copy and paste from screen to screen, and project to project
- Tables for managing numeral, string, bit, math, and recipe information
- View and edit bitmap images in the Image Table
- Symbol manager includes ISO 7000 image library
- Use pre-built or customized keypads
- Object alignment tools
- Global address change tool
- Error log with hot links to the error
- 10 levels of undo/redo

Omron's NTST software lets you create, debug and manage operator interface terminal programs in a familiar Windows® environment with drag-and-drop convenience. The short learning curve to produce clear, easy-to-use screens reduces the time to commissioning.

Freedom to Design Screens Your Way

The NT-series HMIs offer unmatched programming flexibility, allowing screens to be designed to meet your control needs. The programming software, NTST, unlocks this flexibility. For instance, some NT models allow memory to be allocated to numeral and string tables based on your needs. Configure objects from the drag-and-drop toolbar and add finishing touches using a variety of drawing tools. A library of standard ISO 7000 symbols can be used to denote actions, items, and conditions. Preconfigured or custom keypads can be integrated for numeric entry. Project data is managed from a series of easily navigated tables for storing numeric, bit, string, image, recipe, and math function data. Control and display objects that reference these tables can utilize indirect addressing, where the PLC can specify the table location to be accessed, allowing one screen object to reference multiple table locations. A parent/child option allows complex screens to be created from parts that can be used over and over again, reducing

programming and utilizing memory more efficiently. Also, addressing in the NT unit is direct to the memory locations within the PLC, regardless of PLC vendor. This allows programs to be created using the addressing schemes familiar to the PLC programmer.

Cut Debugging Time

NTST employs a variety of features that allow programming and debugging time to be compressed. Download one screen at a time to the NT unit to check out new screens or minor edits. Upload individual items such as the different data tables, screens, alarm history and screen history logs, and recipe settings. Object filters in the screen editor allow only a specific object type to be shown, to simplify editing of complex screens. An error log includes hot links to the actual error, so that they can be viewed and corrected quickly. The ON/OFF states and flashing properties of objects can be checked in the programming environment of NTST to avoid simple mistakes in formatting.

Ordering Information

Description	Part Number
NT Series Support Tool v 4.6	NT-ZJCAT1-EV4
Programming Cable 9-9 pin	C200H-CN229-EU

Models Supported

NT Series Support Tool can be used with the following models: NT11S, NT20S, NT30, NT30C, NT21, NT31, NT31C, NT600S, NT620S, NT620C, NT631, NT631C

System Requirements

Computer

- IBM PC or 100% compatible Pentium 100 MHz or faster processor
- 32 Mbytes memory minimum
- At least 35 Mbytes free area on hard disk (for installing Support Tool, System Program, System Installer and Supplement Symbols)

- Another 15 MB required for Parts Collection for Support Tool
- CD-ROM drive
- VGA compatible display
- Serial or bus mouse

Operating System

Microsoft® Windows® 95, Windows® 98, Windows® NT Version 4.0 (Service Pack 3 or later)

RS-232C cable to transmit screen data

Tools to Organize Your Design

NTST takes full advantage of the drag-and-drop, windowed, dialog-box-driven environment. A handy and familiar tree-style project window helps you organize the project. Drop-down menus provide quick access to all programming areas and actions needed to configure a project. A helpful status bar at the bottom of the screen shows the NT touch screen and PLC vendor for this program. A series of tables listed in the Tools menu and project tree allow quick access to numeric, recipe, string, and background math setup information. The project information and programming tools are readily available to make programming and maintaining project from NTST a breeze.

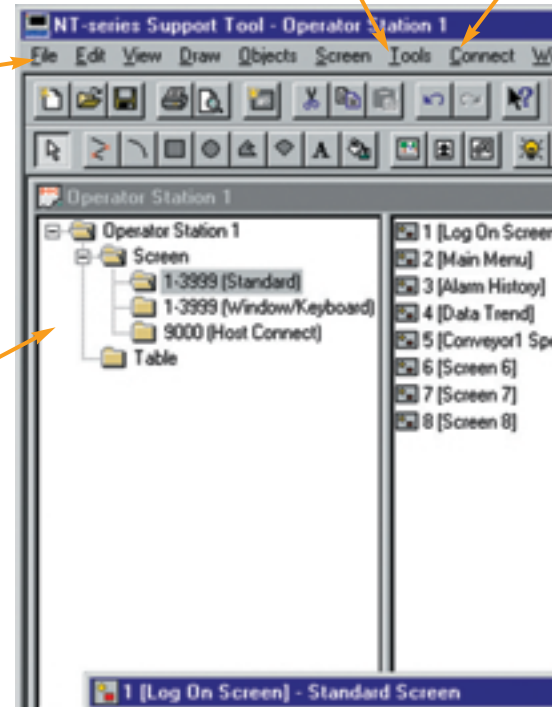

Tools Menu

File Menu

Tree-style Project Menus

Presents project data on an organized, familiar tree structure. Quickly access screens and tables within a project.

Pre-built Input Keypads

A variety of keypad layouts are available from the Symbol Library included with NTST.

Status Bar

Shows details about the highlighted object. For control objects, critical programming information is shown.

Connect Menu

Label Centering Tool

Centers labels with touch switch and lamp objects.

Drag & Drop Control Object Toolbar

Object Filter

Reduce clutter on a screen in order to edit a buried object of a certain type.

Alignment Tools

Select a group of objects and align them top, bottom, left, right, center vertically or horizontally.

Windowed Environment

Remaining NT Memory/ Total NT Memory

Determine how much more room you have to program in the NT unit's memory.

Translation Support Utility

If your equipment is used overseas, the NTST Translation Utility reduces time and costs associated with the translation and maintenance of translated screen projects. After you create a program, import it into the Translation Utility where the text strings will be automatically stripped from the project and displayed in the first column, column A, of a database. Next, create a second column, column B, that will store the new language text. Have the translator simply translate the words in column A into column B. Then a menu command, Generate, is selected to create a new screen project containing the translated text. This can be repeated within the same database for up to six languages.

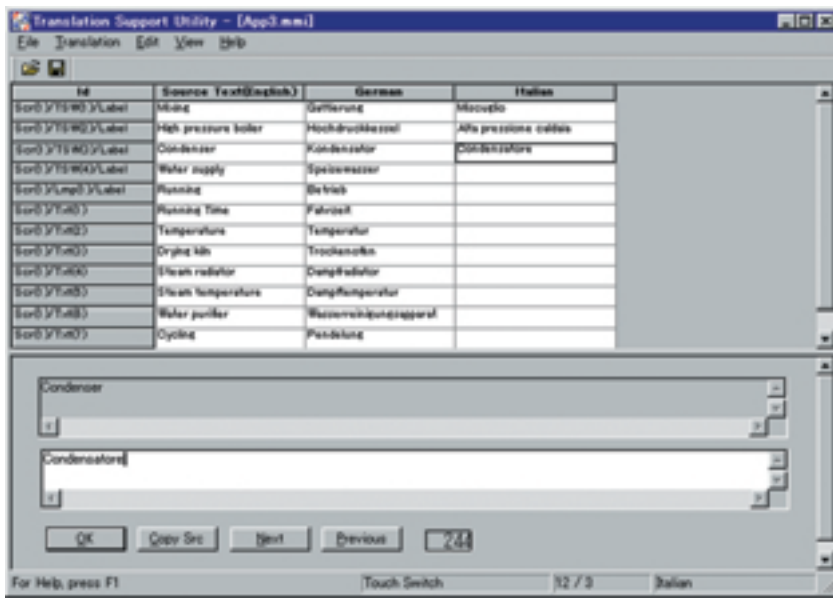

Works with Most NT-Series Touch Screens

The Translation Utility works with projects developed for NT11S, NT20S, NT21, NT31, NT600, and NT631 touch screens.

Debugging Time and Validation Time Savings

Each new language file is simply the master English file with the English text swapped out for translated text. This means only one master screen project must be maintained. Maintain only one engineering project!

The work of the translator is greatly simplified. The language translation activity can take place in Microsoft Access or Excel, not in NTST. This means your translators do not have to hunt through the screen project trying to locate text strings. It also means your translators do not have to be screen programming experts. If they can read a column of text in Excel, they can translate your entire project!

Modifying Existing Programs

Updating the master program is infinitely easier with the NTST Translation Utility. No longer do engineering changes need to be made to the master project and all translated files. Make the engineering changes to the master project and then simply re-import the master project into the existing translation database for that project. The translation support utility automatically compares contents of the new master project to the original import and identifies areas where text changes. Existing translation work is maintained and is automatically reused. New text that requires translation is added to the database. Select Generate once the touch-up translation is complete to create the final translated projects.

Languages

Translation Utility supports these languages:

- English
- Spanish
- French
- Japanese
- Chinese (Simplified and Traditional)
- German
- Italian

System Installer

Quickly update the firmware program of the operator interface using the NTST system installer. This software utility allows programmers to select from a variety of firmware programs for specific NT model types and then transfer the firmware to the NT unit. Use the System Installer to upgrade to newer versions of firmware or download firmware for different communications drivers.

String Table

Data strings tie ASCII data to a PLC memory location for reading or writing, and display in lamps, switches and text blocks. Strings can be referenced from anywhere in the project, including alarm histories and string displays. The string table lets you organize them for easy reference.

Models NT21/31/631 allow string table entries to be expanded from 256 (default) to 1000 or 2000 entries. Larger string tables consume NT memory resources.

Recipe Table

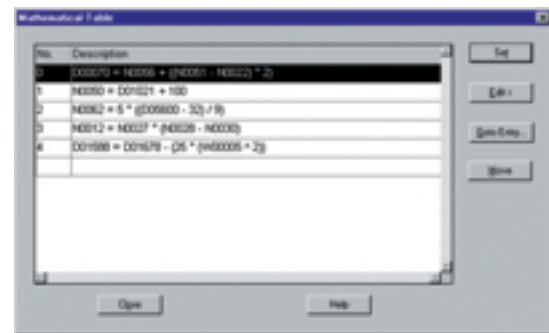

The recipe table lets the programmer handle many functions:

- Create recipes
- Manage data for recipe objects
- Import and export data to/from the recipe table to a comma separated variable (CSV) file for future reference
- Limit operator access to making changes in recipe parameters
- Choose the link to the PLC data memory
- Configure how data will be displayed for the operator.

The recipe table manages up to 40K bytes of recipe memory.

Math Table

Store customized math equations and Boolean logic in the math table. Use it to process results from PLC data memory or references to the Numeral Table of NT terminals and constant values. Results can go to PLC data memory or the NT's Numeral Table. The math table can convert results into engineering units, scaling the value for display purposes. This eliminates the need for creating math in the PLC that can slow down processing.

Numeral Table

All screen objects with numbers refer to this table to link back to the PLC memory area. Use the numeral table to organize data and establish initial or default values and format. This table references PLC memory locations to define constant values such as initial set point for timers, counters and temperature controllers. Subsequent data from the PLC resets and updates these values.

Models NT21/31/631 allow the numeral table to be increased in size from 512 (default) to 1000 or 2000 entries. Larger numeral tables consume NT memory resources.

NT-Series

High Function Touch Screens NT21 / NT31 / NT631	14 - 21
Basic Function Touch Screens NT20S / NT600S	22 - 25
Large Function Key Unit NT11S	26 - 29
Small Function Key Units NT2S	30 - 33

Give your operators real-time information to control plant floor action using Omron's operator interfaces. Our full line includes small function-key units with flexibility to display critical messages, monitor bit status or enter numeric values. Touch screen models for more demanding applications deliver a wide range of capabilities including trending, alarm history storage, recipes, background math calculations, and input object lockout. Pair up Omron's space-saving operator interfaces with PLCs from Omron, other manufacturers, PC-based control boards, and DeviceNet networks. Omron has the right HMI for your needs.

Technical Highlights

Get the Most from Your Omron PLCs

The NT21/NT31/NT631 operator interface products create superior Omron PLC solutions by taking advantage of features that other HMI products simply cannot offer in an Omron system. Our HMI products are designed with the same attention to quality and performance that go into our broad line of industry leading PLCs. Omron's NT21/31/631 also offer significant programming flexibility in object layout and PLC controls, allowing you to create the program needed to realize your operator interface vision.

- **High-Speed NT Link** - This 115 kbaud serial Omron protocol allows rapid data exchange with Omron CJ1 and CS1 PLCs.
- **NT Link 1:N** - At 38.4 and 115 kbaud, NT Link 1:N allows 8 screens to be connected to a single serial port on CJ1 and CS1 PLCs with minimal impact to performance.
- **PLC Programming Console** - Simulate a hand-held programming device right on the HMI screen and monitor, set PLC values, and make minor ladder program changes.
- **PLC Device Monitor** - This function allows the NT31 and NT631 to function as watch windows, where the user can specify and view banks of PLC addresses, change values, and view errors without opening the panel.
- **Pop-Up Windows** - Present up to two pop-up windows at a time on the HMI screen to control critical information in a timely manner.
- **Window Control Area** - Control pop-up windows from the PLC memory by manipulating the window control area.
- **Parent/Child Windows** - Create screen segments that can be used again and again throughout a project. This conserves both screen memory and programming effort.
- Same programming functionality available in 5.2", 5.7", 10.4", and 11.3" screen sizes.
- DeviceNet communication module available for NT31 and NT631.
- Supports multi-vendor communication, allowing Omron touch screens to be the standard HMI.
- Memory module can be set to automatically upload or download both screen data and system firmware.
- Analog data can be displayed in chart, bar graph, and needle gauge objects.
- Binary status can be shown with lamps, animated bitmaps, and alarm bits.

Multi-Vendor Communications

Standardize on Omron's high quality touch screens regardless of which PLC vendors you use. Our drivers and vendor-specific cables allow Omron's NT31 and NT631 touch screens to communicate with the PLCs from the following vendors:

- Omron (CV, CS1, CJ1, CPM1A, CPM2□, SRM1)
- Allen-Bradley (ML1000/1200/1500, SLC 5/00, 5/01, 5/02, 5/03, 5/04, 5/05)
- GE Fanuc Series 90-20 and 90-30 PLCs
- Mitsubishi A and FX series PLCs
- Siemens S7-300 and S7-400 PLCs
- Modicon Micro, Premium, Quantum, Momentum

High-Speed NT Link

High-speed NT Link highlights the advantages that come when you partner an Omron PLC with an Omron touch screen. Combine Omron's CS1-EV1 PLCs with NT21/31/631 to benefit from 115k baud serial communications tailored exclusively for PLC to touch screen data. It is almost twice as fast as Host Link and 25% faster than standard NT Link when a single NT unit is connected to a PLC serial port. High-speed NT Link is three times faster than standard NT Link with 8 NT units connected to a single CS1 or CJ1 serial port.

OMRON Data Comparison

DeviceNet

The NT31 and NT631 can be quickly configured for DeviceNet communications, integrating seamlessly into your open DeviceNet network. This is truly a multi-vendor PLC solution, since no modifications need to be made to the screen data when changing the brand of the DeviceNet master. (See the DeviceNet Technical Discussion in the Technical Highlights of this catalog for detailed specifications.)

NT Link 1:N Communication

This protocol allows multiple interfaces to be connected to one PLC communication port. It is available with both standard and high speed NT Link. This protocol allows you to create a multi-drop system that puts up-to-the-second data at locations along the production line. (See the NT Link section in the Technical Highlights of this catalog for more details and specifications.)

Memory Link

Directly connect the NT with a single board computer, PLC or personal computer via RS-232C or RS-422 communications using Memory Link. This protocol allocates a virtual memory area within the operator interface to store data values. The screen program references this internal memory area for all screen objects, just as though this memory area belonged to a PLC. This means your PC based device only has to be concerned with referencing this memory area to read and write data values. (See the Memory Link section in the Technical Highlights at the end of this catalog for more details.)

Recipe Data

Recipes store rows of values within the NT memory and operators can send that information down to the PLC to configure it for a batch operation. The new Recipe Table editor in NTST v4.6 creates and manages recipe information, allowing recipe data to be up- or downloaded from the NT hardware. NTST can also work with comma separated variable files to read in large recipe tables, or store uploaded recipe data for future reference or use.

No.	Cake	Cream	Sugar	Egg	Milk
1	Cheese cake	1000	300	20	300
2	Almond cake	300	200	10	250
3	Fondant cake	1000	200	10	300
4	Carrot cake	800	150	10	250
5	Butter cake	700	150	20	300
6	Apple cake	500	300	5	300
7	Banana cake	500	300	10	150
8	Layer cake	1000	450	10	300
9	Cream cake	1000	300	15	100
10	Coconut cake	0	0	0	0

Background Math Function

NT31/631 units store a Mathematical Table that allows functions of different formats to run in the background of the NT31/631 units. The equations can be constructed of constants, values from NT31/631 memory, or values from PLC memory locations. Calculation results can be sent to NT31/631 internal memory or directly to the PLC memory. Now you can convert values for display purposes within the display device, leaving the PLC to worry about calculations that affect your process.

Input Enable - Bit Interlock Function

This function is suited for use as a password protection function. The interlock function denies access to input objects (touch switches, thumb-wheels, numeric input fields, and string input fields) based on the status of a bit in the PLC. Each input object within an NT31/631-EV2 project can be assigned to a unique bit or the same bit within the PLC. If the bit is ON, the input object will function. Turn the bit OFF and the input object is locked out. An excellent application of this feature would be login security. When the operator enters a password using a keypad, the PLC will compare the entered number to the values in certain PLC memory registers. The PLC can then change the referenced bits from 0 to 1 accordingly, granting access to different screen areas or input objects as designated by the user's access level.

Pop-Up Windows

Two window screens can be displayed in one standard screen, maximizing screen space and application efficiency. All objects (except thumb-wheel switches) can be displayed within these pop-up windows allowing operators to simultaneously view different aspects of the process as needed. Create a variety of pop-up window screens and call them up for display in your application as needed, either manually or from PLC memory.

Alarm History, Frequency, and Activity

Track your process and create a fault record using the alarm history, frequency and activity functions. These pop-up windows graphically convey problems in your process and allow you to make corrections to save time and materials. Simply drag the alarm object into the touch screen project, create a PLC bit reference in an alarm bit table, add a message to that bit, and the NT21/NT31/NT631 are ready to track and report alarms. The complete alarm history and frequency reports can be printed from the system menus.

Memory Unit

This portable FLASH memory module includes two 1MB banks. Each bank can store the screen data from a fully loaded operator interface, or the firmware program for the NT21, NT31 or NT631. The module can be set for manual or automatically triggered upload or download of data. In fact, the module can be configured to first download a new firmware program and then to automatically download new screen data. Imagine how easy it would be to update customers in the field! No PC connection is needed. Just plug on the module, power up the touch screen and transfer the programs.

Programming Console

When using an Omron PLC and NT-Link communications, this feature allows you to adjust mnemonic programming and access, monitor, and change individual memory addresses using the operator interface instead of a laptop or hand-held programmer. Now, maintenance personnel no longer need to carry a hand-held programmer or laptop from PLC to PLC to perform diagnostics. It can be performed right from the front of the operator interface without ever opening the control panel.

Software

NT21/31/631

NT20S/60S

NT11S

NT2S

Technical Highlights

Device Monitor Function

Another feature available on the NT31/631 when using an Omron PLC, the Device Monitor Function allows the NT to monitor tables of individually selected PLC values, or entire ranges of a PLC memory area. Once the values or ranges are selected, data values can be viewed in real time as they change. There is also a window to view errors currently active within PLC memory. Previously, only the PLC programming software could perform these diagnostics. Now, no laptop is needed for these basic debugging tools.

Registration Monitor – Manually create a list of PLC addresses and simultaneously monitor them. Update the different values by touching the address and entering a new value with a popup keypad.

PLC Error Screen – View the current errors in the PLC.

Continuous Monitor - Create a table of 50 PLC addresses to monitor and change. Simply select the initial address, and the table automatically fills in with the next (25 for NT31, 50 for NT631) sequential addresses.

Images and Art Objects

Bitmap images can be displayed as fixed objects or image lamps. Image lamps have an ON state and OFF state, each represented by a different bitmap. Image objects display bitmap images from the image table stored within the operator interface. This can be a fixed reference to one image table location, or the reference can be controlled by the PLC. This is an excellent way to quickly achieve animation.

Touch Switches and Lamps

The original purpose of touch screens was to provide a cost effective replacement for hardwired pushbutton and selection switches and indicator lamps. This is still one of the primary motivations on panels today. The NT31 and NT631 include a variety of touch switch and lamps, as well as a library of image objects to lend that special touch. Omron touch switches and lamps include a higher degree of control than most touch screen products, allowing the objects to be sized, colored, and positioned as needed. There are also many labeling options available:

- Control bits
- Control pop-up windows
- Switch screens
- Copy values
- Input numeric & text characters
- Move the cursor
- Execute a screen print

Dynamic Labels

The labels within touch switches and lamps can change with bit state, display a numeric value from PLC memory, or display any number of messages directly from a string table as commanded by the PLC. The string table is a numbered list where each table entry represents a different string message. The PLC can specify a string table entry number and change the message displayed within a switch or lamp, creating a great deal of application flexibility.

Numeric and String Display

Numeric values can be displayed as bar graphs, needle meters, or simple formatted numerals. All of these options are highly customizable, and can be located anywhere on the screen. Strings can be displayed as alphanumeric characters read from the string table in the operator interface memory as directed by the PLC, or taken directly from PLC memory.

Graphical Data Display

Use colorful charts and graphs to convey complex data to your operators at a glance. Chart data can be logged for review of previous activity.

Communication Ports

The NT31 and NT631 series interfaces have a dedicated printer port, an RS-232C port with a 5vdc pin, and a port that is configured to RS-232C, RS-422/485 (the NT631 uses a terminal block for RS-422/485 connection). The dedicated RS-232C port is generally left available to ensure a free port for program transfer. The dedicated RS-232C port is also available for connection to a bar-code reader (Omron serial driver only). The NT21 series interface has two RS-232C ports. One port can be converted to RS-422/485 using the NS-AL002 adapter.

Compact Design

The shallow depths, efficient face dimensions, and small panel cutout requirements make this NT series ideal for mounting in confined spaces.

Effective display area	117 (H) x 63 (V) mm (5.2 inches diagonal)	118.2 (H) x 89.4 (V) mm (5.7 inches diagonal)	ST211□ & ST151□: 211 (H) x 158 (V) mm (10.4 inches diagonal) ST141□: 229 (H) x 172 (V) mm (11.3 inches diagonal)
View angle	Left/right direction: 30°; Up/down: 30°	NT31: Up: 20, Down: 30, Left/right: 30; NT31C: Up: 45, Down: 60, Left/right: 50	ST211□: No restriction; ST141□: Up/down: 30, Left: 55, Right: 45; ST151□: Up: 40, Down: 55, Left/right: 55
Display color	ST121□: 2 color black/white	ST121□: 2 color black/white; ST141□: 8 color	ST211□: 2 color black/gold; ST141□ & ST151□: 8 color
Life expectancy	50,000 hours minimum	50,000 hours minimum	ST211□: 30,000 hrs min.; ST141□ & ST151□: 50,000 hrs min.
Contrast adjustment	Knob on back of unit	NT31 & NT631-ST141□ only: Adj. in 100 levels by touch switch operation at panel	
Max. number of registered screens	3999 screens		
Backlight			
Life expectancy	50,000 hours min.	25,000 hours min.	ST141□: 25,000 hours min.; ST151□: 30,000 hours min.
Replacement	Non-replaceable	NT31, NT631-ST141□ & NT631-ST151□: Can be replaced from the rear	
Brightness adjustment	–	NT31 & NT631-ST141□ only: Adj. in 3 levels by operation at the touch panel	
Automatic turn-off function	Can be set to turn off in 1 to 255 minutes, or to remain on with screen saver		
Touch panel			
Type	Resistive type		
Number of switches	91 (13 horizontally x 7 vertically)	192 (16 horizontally x 12 vertically)	768 (32 horizontally x 24 vertically)
Max. number registered on one screen	91	192	256
Life expectancy	One million operations minimum		
Serial communication			
Serial port A	Conforms to EIA RS-232C; D-SUB 9-pin connector (female); +5 V (250 mA max.) output at pin No. 6		
Serial port B	Conforms to EIA RS-232C; D-SUB 9-pin connector (female); +5 V (250 mA max.) output at pin No. 6	EIA RS-232C or RS-422A/485 (selectable, by memory switch setting); D-SUB 25-pin connector (female)	EIA RS-232C (serial port B terminal block selectable by memory switch setting); D-SUB 9-pin connector (female)
Serial port B terminal	–	–	EIA RS-422A/485 (serial port B connector selectable by memory switch setting); Terminal block
Battery backup	Numeral/character string memory tables data in the NT unit; Alarm history data table in the NT unit; Recipe tables in the NT unit; Real time clock and calendar (NT31/31C/631/631C only)		
Screen print function	–	"ESC/P", "Color": Color printing conforming to ESC/P 24-J83C; "PC-PR201H", "Color": Color printing conforming to PC-PR201PL; "ESC/P", "Tone": Monochrome printing in 8 grayscale levels, conforming to ESC/P 24-J82; "PC-PR201H", "Tone": Monochrome printing in 8 grayscale levels, conforming to PC-PR201PL; "PCL-5", "Tone": Monochrome printing in 8 grayscale levels, conforming to PCL 5; however, the NT31 & NT631 supports monochrome printing only	
Calendar & clock function	–	Displays the current time in accordance with the built-in clock; Displayed and set with "Calendar Check" in the MAINTENANCE MODE" menu

Technical Highlights

NT20S

- 5" Monochrome LCD w/Blue pixels
- 5" Monochrome LCD w/Black pixels
- 256x128 pixel resolution
- 72 touch cells per screen
- 96 K program memory
- 500 screen capacity
- Field replaceable backlight
- 54 mm (2.1") panel depth
- Ratings: UL/CE/CSA, NEMA 4

NT600S

- 9" Monochrome LCD w/Blue pixels
- 9" Electroluminescent Display
- 640x400 pixel resolution
- 128 touch cells per screen
- 128 K program memory
- 500 screen capacity
- Field replaceable backlight
- Ratings: UL/CE/CSA, NEMA 4

The NT20S and NT600S operator interfaces provide basic touch screen functionality in compact, low-cost packages providing the basic elements required for control. These elements include touch switches, lamps, numeric and string displays, bar graphs, numeric keypads, and thumb-wheels. Screen programs are created in a graphical drag-and-drop environment using the NT-Series Support Tool (NTST).

NT600S

NT20S

Field Replaceable Backlight

Minimize downtime and reduce cost of ownership with the NT20S and NT600S field replaceable backlights. Open the control panel, remove one screw and pull out the backlight unit. It is as simple as that. There is no need to remove the NT unit from the panel for servicing. Service the backlight right there on the spot.

Touch Switches and Lamps

Create touch switches that are as small as the actual touch cell, or as large as the entire screen. Shadow effect can be added to a touch switch. Lamps can be set to any size on the screen. Square or circular lamps can be created. Added text to both touch switch and lamp objects.

Static Screen Text

Choose from a variety of different font sizes. Display the text as an inverse image. Flash the text to draw attention to a message. Select different ratios of text height to width.

Keypad Numeric Input

Enter numeric values into PLC data memory areas. Specify the data memory area in the NTST numeral table. Thumb-wheel object mimics the input of a traditional thumb-wheel device. Default numeric entry keypad automatically appears at the bottom of the screen. It can input values to multiple numeric fields. Set high and low limits for each numeric input.

Numeric and String Display

Use standard numeric display to show number value. String display field can display ASCII message strings from the PLC memory.

Bar Graphs

Bar graphs can display numeric values graphically. Set the max. value of the bar graph so that a full bar graph conveys the proper message for the process. Resize the bar graphs and display in horizontal and vertical orientations. Configure bar graphs to fill up, down, left, or right.

Technical Highlights

Communication Options

Connect the NT20S and NT600S to a PLC using Host Link, NT Link 1:1, and NT Link 1:N to a custom controller using a Serial Link protocol. Protocols are designed for high-speed operation, updating bit, numeric, and string data immediately for display or control purposes. Fast updates and quick response times are guaranteed.

NT Link 1:1

NT Link, an Omron proprietary protocol, is optimized to provide fast and reliable communication between a single NT unit and PLC. Omron uses a 9-pin RS-232C serial cable to connect one NT to a PLC serial port, referred to as a 1:1 connection. It is possible to connect multiple screens to multiple serial ports on the same PLC using 1:1 connections as shown to the right.

NT Link 1:N

The NT Link protocol can also be used to connect multiple touch screens to a single PLC serial port. Eight screens can be connected to a single serial port on the PLC, reducing the need for additional PLCs or serial port modules. NT Link 1:N provides extremely fast operation even with 4 screens communicating simultaneously over an RS-422A network. The diagram highlights how NT20S and NT600S units can be connected using NT Link 1:N. (See the NT Link section in Technical Highlights for more detailed information.)

Serial Link

The NT20S-ST128 is designed to communicate with the serial port of any custom controller programmed in Visual Basic, C, C++, etc. It is an excellent fit for a custom built solutions that require rugged, industrial operator interfaces. The serial device sends and receives data from the NT20S using a special ASCII commands set. Once the serial device's program is complete, the NT20S can be customized quickly to meet new customer demands.

NT11/31/631

NT203/600S

NT11S

NT2S

Technical Highlights

Omron's NT11S alphanumeric 4 line x 20 character operator interface is a flexible keypad unit for applications requiring function key control. Compact and easy to operate, this full-featured operator interface allows accurate monitoring and controlling, and includes slide-in legend for custom labeling of function keys. The extra-large keys on the numeric keypad provide operators the tactile feedback for quick data input or screen change, even when wearing thick work gloves. And the LED backlight of the NT11S LCD presents data clearly even in brightly lit areas.

Menu-Based Screen Navigation

The NT11S screens are navigated from the keypad using a menu driven system. The operator views a menu of options and selects a number from 1 to 4 to change to that screen. NTST software makes it easy to set up and the clear screen and large function keys make it easy to operate.

Password Protected Screens

A password can be assigned that will protect any individual screen change. A password request can be inserted following any menu screen selection, limiting access to sensitive application information. Without a password request, users are free to gain access to any menu selection.

Numeric and String Display

Data displayed on the NT11S screen comes directly from PLC memory for both numeric and string displays. The numeric values can appear as numerals or bar graphs. Strings are displayed and read as ASCII from PLC memory and displayed in alphanumeric fields. These objects can be dragged from the control object toolbar within NTST, allowing critical data to be arranged quickly and clearly.

Numeric Input

The NT11S keypad is the default input mechanism for any numeric input field programmed on the NT11S. Simply drag a numeric input field onto the NT11S screen within NTST and use the keypad to input and enter values.

Sizeable and Inverse Text

The NT11S is considered a 4 line x 20 character display. However, the NT11S allows characters to be created that are 2 lines tall, for attention grabbing critical data. The NT11S screen can mix different sized text characters to help you get your point across.

NT Link 1:1

NT Link, an Omron proprietary protocol, is optimized to provide fast and reliable communication between a single NT unit and PLC. Omron uses a 9-pin RS-232C serial cable to connect one NT to a PLC serial port, referred to as a 1:1 connection. It is possible to connect multiple screens to multiple serial ports on the same PLC using 1:1 connections as shown to the right.

Number of switches	22
Life expectancy	One million operations minimum
Max. number of registered screens	250
Communication standard serial port	EIA RS-232C; 9-pin D-SUB connector (male)
Printer port	25-pin D-SUB connector (female, Centronics)

NT11S Dimensions

mm (inches)

Small Function Key Units - NT2S

Software

- High visibility LED backlit LCD display shows 2 lines of 16 characters
- Choose programmable or message display models
- Compact, fits 1/8 DIN panel cutout
- Six programmable function keys
- Two programmable LED indicators
- Powered by peripheral port or 24 VDC power supply
- Password protect any function key
- Bar graph display
- UL, cCSAus, and CE approvals
- IP65 protection rating
- Programming software included at no cost

NT21/31/631

NT20S/600S

NT11S

The NT2S series was designed to be a low-cost, high function operator interface for micro-PLC applications. Packed with features and easy to program, these small-sized function key units are perfect for accessing PLC data in cost sensitive, or space constrained applications. The compact NT2S 2-line interfaces offer a choice of models: an ASCII message display model and programmable models. The message display model receives ASCII and numeric information from the PLC registers, so no programming tool is needed. The programmable models store extensive custom screen programs within their internal memory, can send and receive information to and from a PLC, and handle scrolling messages up to 256 characters. The Windows® programming tool, distributed free of charge, uses a graphical programming environment to create screens as they will be displayed on the NT2S unit.

NT2S

Technical Highlights

Model Selection Chart

Feature	NT2S-SF121B-E	NT2S-SF122B-E	NT2S-SF123B-E
NT2S programming software required	Yes	Yes	Displays ASCII and numeric data stored in the PLC
Omron PLC peripheral communications	Yes	Yes	Yes
PLC serial port communications	Yes	Yes	–
Real time clock	Yes	–	–
Powered by peripheral port	–	Yes	Yes
Powered by external 24 VDC	Yes	–	–
Omron PLC connection	Yes	Yes	Yes

F-keys enter numeric data	Yes	Yes	Yes
Displays ASCII messages from PLC registers	–	–	Yes
PLC bit controlled text	Yes	Yes	–

NT2S-SF121B-EV2

Get a big value from this small package. The free Windows® based programming software allows users to design screens that simplify data entry and program function keys. The function keys can perform multiple tasks within a program. These units use 24 VDC, which makes this NT2S ideal for multi-vendor PLC applications. A real-time clock sends the year, month, date, hour, minute, and second information to user-specified PLC registers, enhancing many micro PLC applications. It is a great fit for multi-vendor PLC applications requiring a real-time clock.

NT2S-SF122B-EV2

Eliminate the operator interface power supply! This unit is powered directly from an Omron PLC peripheral port (5 VDC), through the communication cable, making for an extremely cost-effective way to integrate an operator interface to cost sensitive applications. This operator interface has display and data entry capabilities and utilizes the Windows® based software tool included with the unit.

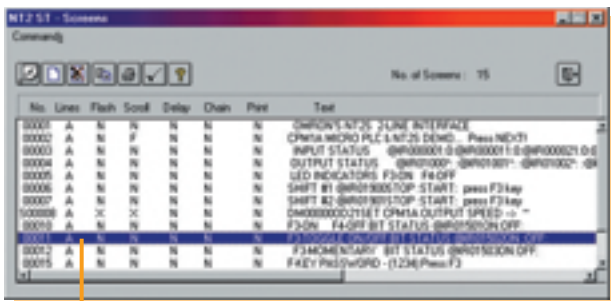

NT2S-SF123B-EV2

Consolidate all project programming within the PLC, eliminating the need to maintain separate PLC and an HMI programs. Choose the NT2S-SF123B-EV2 for small applications requiring an operator interface that has message display, occasional numeric entry, and manual or PLC controlled screen changing capabilities. It eliminates a separate power supply by using 5 VDC from the PLC peripheral port through the communication cable. This little unit can even display bar graphs and formatted numeric displays. The 6 function keys can navigate to different PLC registers and adjust PLC numeric values. This is one very efficient design, only from Omron!

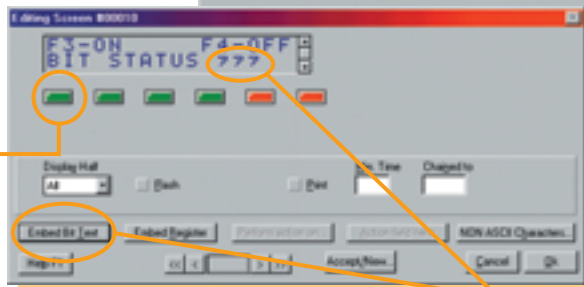

NT2-Software Tool (NT2ST)

Program the NT2S-SF121B-EV2 and the NT2S-SF122B-EV2 in an easy-to-navigate, WYSIWYG windowed environment of NT2ST. Unlock the tremendous flexibility of the NT2S programmable screens and function keys. A functions key editor screen allows management of global key assignment, while local key assignments are handled within the screen editor. NT2ST assigns default functions to keys for screens such as Link Screens (for navigation) and Special Screens (for data input). Screens can be programmed for scrolling text, half-screen switching, bar graphs, bit sensitive text, and numeric display and entry, all within compact, easy-to-use and understand editors. And you cannot beat the NT2ST Quickstart Guide to get your program up and running quickly.

Manage NT2S project screen and function key assignments from a single dialog box. This dialog allows screens to be created, selected for edit, and provides a quick view of properties and contents.

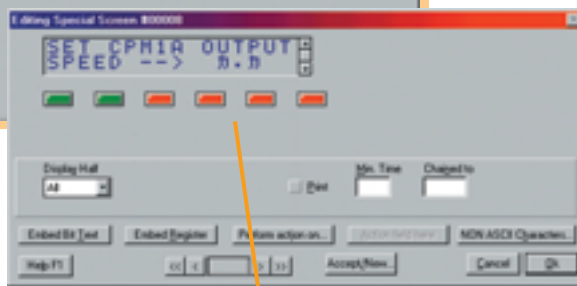

Create tag names for all PLC coils and registers from this single dialog. Refer to tags by PLC address or assigned name throughout the project.

“Embed bit text” allows messages from 1 to 32 characters to be controlled by a PLC bit status. Specify ON (1) and OFF (0) text messages. NT2ST creates place holders.

Function keys can be programmed for local or global operations. Local assignment overrides global settings. Keys can manipulate words and bits in a variety of ways.

Special numeric input screens allow programmers to quickly setup data input fields. Keys 3-6 automatically default to data input keys.

Cable Solutions for Multi-Vendor PLCs

Allen Bradley MicroLogix 1200

An alternative cable configuration uses a custom RS-232 9-to-9 PIN cable connecting to the Allen-Bradley 1767-CBL-PM02(Series C). The diagram below shows the pinouts for the custom RS-232 cable:

AB MicroLogix 1200 Communication Cables

1761-CBL-PM02(Series C) DB9 to 8 pin mini-din connector (order from AB)

Allen Bradley SLC 5/02

Communicates via AB's DF1 protocol. This PLC comes with only a DH-485 port. The Allen-Bradley 1747-KE module must be purchased to provide a serial connection on the SLC 5/02. Connect the communication cable from the NT to the serial port on the 1747-KE module.

AB SLC 5/02

NT31 (Port A)
NT631 (Port A or B)

NT31 (Port B)

Allen Bradley SLC 5/00, 5/01, 5/02

This cable can only be used in 1:1 connection with DH485 port.

AB SLC 5/00, 5/01, 5/02

NT31 (Port A)
NT631 (Port A or B)

NT31 (Port A)

AB SLC 5/02 Communication Cables and Accessories

NT31C-CN321-EU	3.0 m cable, 25 to 9 pin, NT to AB SLC PLC
NT631C-CN321-EU	3.0 m cable, 9 to 9 pin, NT to AB SLC PLC
1747-KE	DB9 Serial Port Module (order from AB)
1747-C13	DH-485 module connection cable
V060-E1-2	Operation Manual – Multi-vendor Connection

Cable Solutions for Multi-Vendor PLCs

Allen Bradley SLC 5/03, 5/04, 5/05

Communicates via AB's DF1 protocol. Connect the communication cable from the NT to a serial port on the PLC using Omron cable part numbers.

AB SLC 5/03, 5/04, 5/05

NT31 (Port A)
NT631 (Port A or B)

NT31 (Port B)

Allen Bradley SLC 5/03, 5/04, 5/05

This cable can only be used in 1:1 connection with DH485 port.

AB SLC 5/03, 5/04, 5/05

NT31 (Port A)
NT631 (Port A or B)

NT31 (Port A)

AB SLC 5/02 Communication Cables and Accessories

V060-E1-2	Operation Manual – Multi-vendor Connection

GE 90-20 and 90-30 Series PLCs

Communicates via GE's SNP-X protocol. The Omron NT is communicating RS-232, while the GE PLC uses RS-422. An RS232 to RS422 converter (HE693SNP232A) is needed to complete communications.

GE 90-20 and 90-30 Series

NT31 (Port A)
NT631 (Port A or B)

NT31 (Port B)

GE 90-20 and 90-30 Series Communication Cables and Accessories

HE693SNP232A	RS232 to RS422 adapter (order from GE)
V060-E1-2	Operation Manual – Multi-vendor Connection

Cable Solutions for Multi-Vendor PLCs

Siemens S7-300 and S7-400 Series PLCs

Communicates with Siemens HMI Adapter protocol. The Omron NT is communicating RS-232 to the Siemens HMI adapter, 6E57-972-OCA10-OXA0. The adapter is necessary to convert the HMI Adapter protocol into the Siemens proprietary MPI protocol.

Siemens S7-300 and S7-400 Series

6E57-972-OCA10-OXA0

NT631C-CN323-EU

NT31 (Port A)
NT631 (Port A or B)

NT31C-CN323-EU

NT31 (Port B)

Siemens S7-300 and S7-400 Communication Cables and Accessories

NT31C-CN323-EU	3.0 m cable, 25 to 9 pin, NT to Siemens PLC
NT631C-CN323-EU	3.0 m cable, 9 to 9 pin, NT to Siemens PLC
6E57-972-OCA10-OXA0	HMI Adapter for MPI protocol (order from Siemens)
V060-E1-2	Operation Manual – Multi-vendor Connection

Mitsubishi A-Series PLCs

Communicates using Mitsubishi's Computer Link protocol. The Omron NT and the Mitsubishi A-Series PLC are communicating using RS-232 communications. Communications can be RS-422 by using custom cables as specified in Operation Manual V042-E1-1.

Mitsubishi A-Series

Computer Link Module

NT631C-CN324-EU

Technical Highlights

NT Link

NT Link is a high-speed serial protocol designed specifically for Omron HMI to Omron PLC communications. The protocol operates at 38.4 or 115.2 kbaud, the highest speed serial network in the industry. More importantly, it is not an ASCII based message. The message is very compact, addressing the words and bits in PLC memory directly. Combine a high baud rate with compact messaging and you have spectacular speed.

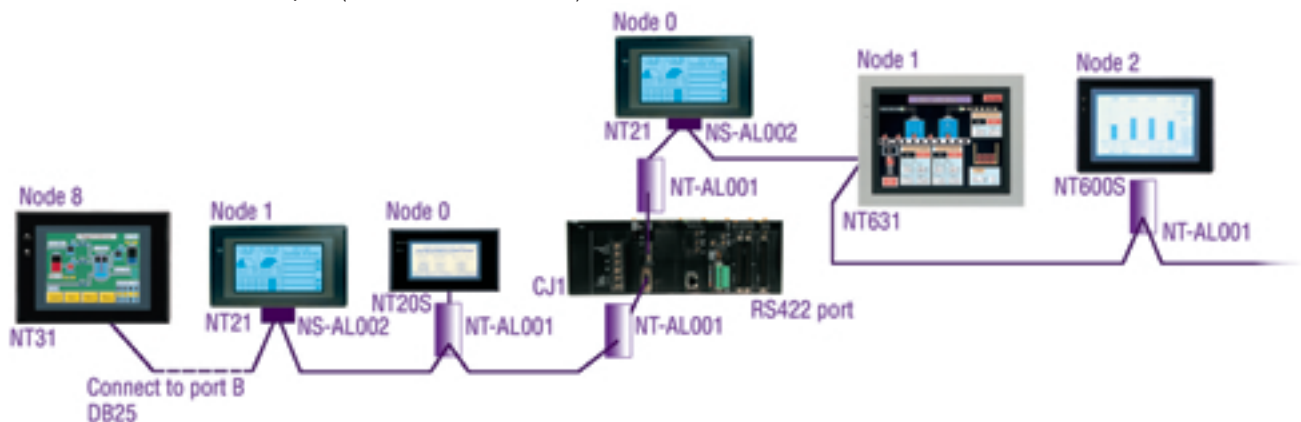

Compare this to Omron's open Host Link protocol, the protocol used by non-Omron HMI to communicate to Omron PLC serial ports. Host Link serial protocol operates at a maximum speed of 19.2 kbaud, and messages are transmitted using ASCII character representations of numbers. The slow baud rate combined with the larger message size translates into perceivably slower performance. The speed of NT Link translates into an increased sense of control. Operators have the sense of almost immediate response from the PLC logic and outputs. Updates report so quickly that it is almost like watching the inside of the PLC in real-time. The operator is in control. There many ways in which NT Link can be used for HMI to PLC communications. They are: NT Link 1:1, NT Link 1:N, and High Speed NT Link 1:N. Omron PLCs support the following protocols:

PLC Family	Connection	Host Link 19.2 kbaud	NT Link 1:1 38.4 kbaud	NT Link 1:N 38.4 kbaud N = 8 max	High Speed NT Link 1:N 115.2 kbaud N = 8 max

	CPU Serial CJ1W-SCU#1	Yes Yes	Yes Yes	Yes Yes	Yes Yes
CS1	CPU Peripheral	Yes	Yes	Yes	Yes
	CPU Serial	Yes	Yes	Yes	Yes
	CJ1W-SCU#1	Yes	Yes	Yes	Yes

NT Link 1:N Connection

The NT Link 1:N connection allows up to 8 NT units to be connected to a single PLC serial/peripheral port. This feature is supported only on the CS1/CJ1 PLC platforms, which can have up to 34 total serial ports (2 on CPU plus 16 serial communication modules with 2 ports each.) That means a CS1 or CJ1 can connect to over 272 NT units, all communicating at 115kbaud, and with responses beating that of a single HMI connected via a Host Link driver.

NT Link 1:N connections require an RS-422A network. Some NT units include RS-422A connections (NT31 and NT631), others require an RS232C to RS422A adapter (NT20S, NT600S, NT21).

DeviceNet Communications Module for NT31/NT631

Overview

Omron's DeviceNet module for NT31 and NT631 operator interfaces provides open communications with DeviceNet masters (scanners) from any manufacturer.

Easy

Typical of Omron DeviceNet solutions, the NT-DRT21 DeviceNet module makes implementing HMI communications almost automatic. Assign a DeviceNet network node number to the NT operator interface and Omron's DeviceNet master automatically enrolls the unit, establishing communications without further configuration. Up to 32 input and 32 output words can be mapped automatically and are continuously scanned by the DeviceNet master. An additional 120 words of data can be accessed within the HMI using Explicit Messaging on the DeviceNet network.

Convenient

Reduce wiring effort and expense by placing your HMI onto the existing DeviceNet network. There is no need to run additional serial cables for operator interface communications. The operator interface can reside on the I/O network up to 500 meters away from the DeviceNet master.

Open communication standard

The NT-DRT21 is compatible with third-party DeviceNet masters, so the NT31/631 units can be placed on any system, allowing a facility to standardize on the Omron NT31/631 platform. Programmed NT31/631 units can be used with masters from different vendors without changing the screen program.

Specification Highlights

- NT-DRT21 module mounts on the back of NT31 and NT631 operator interfaces
- Reserve up to 32 input and 32 output words as Remote I/O for continuous update from the DeviceNet master
- 120 additional words of NT memory are accessible using explicit commands from the PLC
- Locate the touch screen up to 500 meters from the PLC on the DeviceNet network
- Baud rate up to 500 kbps
- Program the operator interfaces using NT-Series Support Tool (NTST)
- Operator interfaces are programmed to reference an internal memory area, words 0 through 9999

Hardware Operation

Upgrade operating system

The NT31/631 units are shipped with an operating system (OS) that supports communication. This OS must be replaced with one that supports the NT-DRT21 interface module. Simply connect to Port A on the NT31/631 with the C200H-CN229-EU communication cable, plug into your PC serial port, and use the NT-Series System Installer (included with NTST) to download the DeviceNet OS.

Connect

The NT-DRT21 module mounts to the expansion interface connector on the back of the NT31/631 unit, as illustrated. Connect the NT-DRT21 to the DeviceNet network 5-wire cabling.

Set communication parameters

The system menu for the NT31/631 DeviceNet OS contains the following parameters:

- Communication Speed (Baud Rate): 125, 250, or 500 kbps
- DeviceNet Node Number: 0 to 63
- Strobe ON Time: 30 to 100ms
- Output Area Leading Address: Memory Link word 0000 to 9999
- Output Area Size: 5 to 32 words
- Input Area Leading Address: Memory Link word 0000 to 9999
- Input Area Size: 5 to 32 words

DeviceNet Communications Module for NT31/NT631

Programming Overview

Create project

Using NTST, create a screen project configured for Memory Link, as shown to the right in Diagram A. The illustration in Diagram B shows how information flows from a touch screen object to the DeviceNet network. Screen objects within the NT31/631 are programmed in NTST to refer to the screen's internal Memory Link memory area, addressed from 0000 to 9999, as shown in Diagram C. The NT-DRT21 module then automatically coordinates communication between the Memory Link memory area and the DeviceNet master.

Technical Highlights

Network Configuration Options

Two factors determine how many operator interface terminals can be used on a DeviceNet network:

- Remote I/O capacity available on the network.
- Number of words allocated in the NT31/63I for Remote I/O.

The model of the DeviceNet master and number of devices on the network determine how much Remote I/O is available. If Remote I/O space is limited, more NT31/63I can be placed on the network by reducing the number of the input and output words reserved by the NT-DRT21 unit. Refer to the following charts.

Weighing the options

DeviceNet I/O modules on the network use up Remote I/O capacity, reducing the number of NT units on the network. A DeviceNet Configurator increases the capacity by deactivating explicit messaging and freeing up reserved memory, increasing available Remote I/O capacity and allowing more NT units to be connected to the network. However, explicit messaging can access 120 additional words in the NT memory area. Deactivating the explicit messaging eliminates this option.

Word Capacity of Omron DeviceNet Masters

DeviceNet master	Fixed allocation capacity without configurator		Free allocation capacity with configurator (explicit messaging disabled)	
	Input words	Output words	Input words	Output words
CS1W-DRM21, CJ1W-DRM21	500	500	1000	1000

Calculating the Number of NT31/63I Units

The following examples illustrate the impact of Remote I/O availability and use of a configurator.

DeviceNet master	Input and output words allocated in NT31/63I memory	Using Configurator with Explicit Messaging disabled?	Max Number of NT31/63I that can be placed on the network
CS1W-DRM21	32 IN/32 OUT	No	15
CJ1W-DRM21	32 IN/32 OUT	Yes	31
CJ1W-DRM21	12 IN/8 OUT	No	41

Memory Link

Get the advantages of using Omron's NT31/NT631 operator interfaces with a PC or single board computer for an economical control/display package. The Memory Link feature translates PC serial output to operator terminal protocol and communicates display status back to the PC. A common memory table stores the shared data. This arrangement capitalizes on the strengths of each component: the PC control platform handles the controls and the operator terminal handles the display tasks. Here is how Memory Link can keep costs down.

- Display the output from an embedded PC, PC104 or other serial device without having to install a video board or other converter hardware
- Eliminates the need to write your own or use third-party graphical user interface software to create graphics for touch screens
- Reduces installed hardware costs by using low-cost processors
- Easy to customize the display for short runs of machines

Specifications

- Up to 10,000 words of internal memory allocated for reading and writing data between an Omron operator interface terminal and host device
- Serial communications: RS-232 or RS-422 connection
- Transmission distance between touch screen and PC: 50 ft max. (RS-232); 150 ft max. (RS-422)

Serial Data Exchange Commands

The NT31/631 writes its memory and memory table information to the internal Memory Link area. Data is then processed between this area and the host via serial commands. Here are the commands available:

Data Read Commands/Responses

These commands are used for reading the contents of the NT memory and memory tables. They are issued from the host and the NT unit responds by returning the requested data from the specified Memory Link table location.

- NT Memory Read Command
- Numeral Memory Table Command
- Character-String Memory Table Read Command
- Bit Memory Table Read Command
- Screen Data Comment Read Command
- System Status Read Command

Data Write Commands/Responses

These commands are used for writing data to the NT memory area. They are issued from the host to update NT memory area with new data. The NT screen objects and memory tables reference the memory area and display the new data values. The NT can be set to respond back to the host indicating whether or not the data write was completed successfully.

- PT Memory Write Command
- Numeral Memory Table Write Command
- Character-String Memory Table Write Command
- Bit Memory Table Write Command
- PT Memory Batch Write Command
- Numeral Memory Table Clear Command
- Character-String Memory Clear Command
- Bit Memory Table Clear Command

Notify

These commands are used to notify the host of NT operations. They are issued from a Memory Link table location of the NT unit and require no response from the host.

- Touch Switch Input Notify Command
- Numerical Input Notify Command
- Character-String Input Notify Command
- Direct Area Changing Notify Command
- PT Memory Changing Notify Command

Operation Mode Switch

This command is used to switch operating modes of the NT unit either "Run" to "Transmit" or from "Transmit" to "Run." It is issued from the host

- NT Operation Mode Switch Command

Re-Send

This command allows the NT unit to re-send the last sent notify command to the host. It is issued from the host.

- Re-Send Request Command

Error Response

This command is to notify the host that the command sent contained an error. It is issued from the NT unit to the host.

- Error Response Command

Memory Link

Single Board Controller with RS-232 Connection to NT31/631

Host PC with RS-422 Connection to NT31/631

Time Saving Program Reuse

NT projects designed for Omron PLC connection can be converted to a Memory Link project with the NTST programming tool. This saves time allowing PLC projects to be reused.

Memory Link Examples

When using the NT Memory Link feature, commands are issued between the various NT screen objects and the internal Memory Link table of the NT. Each screen object refers to a location in the Memory Link table. Serial Memory Link commands, composed of ASCII characters, are then passed between the NT's Memory Link table and an external host device such as a PC or single board computer. Control objects such as lamps and touch switches, and tables such as the Numeral Table, refer to the NT memory area (Memory Link Table).

Memory Link Command Structure

A Memory Link Command has the following format:

Request sent from host

[ESC]	R	M	m	c1	c2	c3	c4	I1	I2	s1	s2	[CR]
1B	52	4D	❖❖	❖❖	❖❖	❖❖	❖❖	❖❖	❖❖	❖❖	❖❖	0D

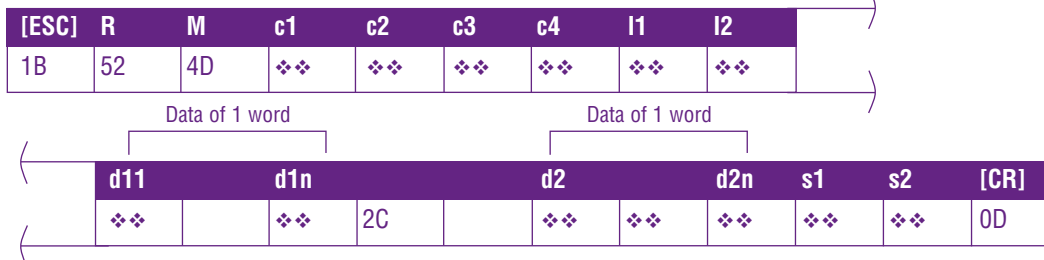

m: Check sum present/absent (1 BCD digit)
0 = Absent
1 = Present
8 = Absent (1 word read)
9 = Present (1 word read)

c1 to c4: Start word number to read (4 BCD digits) 0000 to 9999

I1, I2: Number of words to read (2 BCD digits)
00 – block read 100 words
01 to 99 – 1 to 99 words read
When m is (8) or (9), omit this setting

s1, s2: Check sum (2 hex digits)
When m is (0) or (8), omit this setting

Request sent from NT

c1, to c4: Start word number to read (4 BCD digits) 0000 to 9999

I1, I2: Number of words to read (2 BCD digits)
01 to 50 – 1 to 50 word

d11 to d1n d2 to d2n: Contents of the read words (1 to 4 hex digits) 0 to FFFF

s1, s2: Check sum (2 hex digits)

Memory Link

PT Memory Read Command

The following is an example how the available command set would be used for Memory Link communications between an NT and host (PC/Single board computer):

Memory Link Table Word Mapping

Device	Word	Value
Lamp 1	000100	1
Lamp 2	000101	1
Touch Switch 1	000215	0

This example shows the use of the PT Memory Read Command for the above NT screen, it will be executed from the host (PC/Single Board Computer) via the serial port. The response from the NT unit will be the status of Lamp 1, Lamp 2, and Touch Switch 1:

Request sent from host

[ESC]	R	M	0	0	0	0	1	0	2	[CR]
1B	52	4D	30	30	30	30	31	30	32	0D

Response sent from NT

[ESC]	R	M	0	0	0	1	0	2			
1B	52	4D	30	30	30	31	30	32			
			3	,	1	5	0	0	6	7	[CR]
			33	2C	31	35	0	0	36	37	0D

solve it.[™] center

Advanced Industrial Automation Products and Control Components for all your applications

Bar Code Readers

Omron's cost-effective bar code readers are the ideal solution for high-volume, basic identification and verification applications. Choose from fixed position laser scanners, raster models, and 2-dimensional code readers.

Counters and Timers

Clearly display critical values within a wide range of engineering or time units. We offer robust, NEMA4 models and several different display options that fit your application and budgetary requirements.

DeviceNet Products

As a founding member of the Open Device Vendor Association (ODVA), Omron is committed to promoting DeviceNet as an open platform and we have the industry's broadest offering of DeviceNet products and expertise.

Digital Panel Meters and Displays

Whether you need an intelligent panel meter with built-in display and control functions, or a simple digital display, choose Omron. Select models with communications options, comparative outputs, and NEMA4X-rated, front panels.

Inverters

Get advanced speed control and 179 user-configurable parameters in a compact housing with an Omron AC inverter. At only 5" high, the micro inverters save panel space and are ideal for small motor applications.

Operator Interfaces

Clearly convey information using the powerful graphics of touch-screens. These space-saving interfaces have large image libraries, easy to use programming software, and multi-vendor communication drivers.

PCB Inspection Systems

Omron's VT-WIN PCB solder inspection system accurately evaluates solder joints and component placements at production speeds and can share inspection results via your existing Ethernet network.

Power Supplies

Countless applications rely on Omron's switching power supplies. They offer unrivaled wattage and output options while meeting the latest UL508 and Class 2 standards.

Process and Temperature Controllers

Accurately control temperature in your critical applications with one of Omron's process and temperature controllers. We offer everything from DeviceNet ready units to field-selectable sensor inputs and interchangeable plug-in outputs.

Programmable Controllers

From large, sophisticated systems to smaller, more specialized controllers, Omron is a recognized leader in technology, performance, and quality. Our models have varying I/O capacities, sizes, and communication options to solve your applications.

Radio Frequency Identification (RFID)

Make wireless data tracking a bigger part of your operation and minimize recording errors with an RFID system. Omron offers a wide variety of antennas and tags with different sizes, transmitting ranges and memory capacities.

Remote I/O and Wiring Solutions

Tame tangled webs of I/O wiring in your control panels and achieve high-speed, bit-level communications with our remote I/O and wiring solutions. We have the tools to reduce wiring time, lower installation costs and speed communications.

Sensors

Omron is #1 in photoelectric and proximity sensors, leading the world in technology, solutions and quality. Additional sensor offerings include: limit switches, safety products, encoders, pressure and ultrasonic sensors.

Servo Motors and Drives

For precise control, the W-Series Servo can interface quickly and easily with Omron PLCs using plug-and-play cabling. With output capacities up to 5.5 kW and different motor types, the W-Series ideally suits a wide variety of applications.

Software

Configuring and programming your Omron hardware is quick and easy with our software tools. Omron's sophisticated software lets you unlock the advanced features of our products to solve your industrial automation applications.

Vision Sensors and Systems

Whether you need gray scale, binary, or color processing, Omron's vision sensors or systems can meet your needs. We deliver a complete solution, from software to lighting, cameras, and lenses.

Card Readers

Read and/or write to magnetic stripes and smart cards with our card readers. We offer many different styles of card readers to solve your access control, data tracking and POS applications.

Photomicrosensors

Choose from several mounting, termination and output models to solve difficult detection and switching problems. Optical circuitry eliminates contact bounce, providing unsurpassed product life.

Relays

Omron is #1 in relays, leading the world in new technologies and innovations. Our low signal, general-purpose, solid state, and power PCB relays deliver unmatched selection of sizes, capacities, and performance.

Switches

Omron offers thousands of high quality, reliable switches, suitable for your applications. Flexible options include actuator styles, sealability, switching configuration, load ratings and termination style.

Omron offers local sales and technical support around the corner and around the globe. Our products meet international standards, so you can confidently ship your products with Omron components and systems anywhere in the world.

The organizations listed here do not include the local distributors in each region. Please contact the main office for information.
