

Series 2: UV Enhanced Photodiodes

In addition to these photodiodes, Pacific Silicon Sensor can design and manufacture other devices, in differing sizes or shape, in original packaging and/or with similar specifications; both single elements as well as arrays. Like all our photodiodes, they can be housed in the most appropriate package for your application.

Whatever your light sensing needs...
Make Pacific Silicon Sensor your solution.

Table with 10 columns: Part Number, Active Area (Size and Area), Responsivity (200nm and 340nm), Shunt Resistance, Capacitance, Id, Rise Time, and Pkg. Rows include models like PC1-2, PC2-2, PC5-2, PC10-2, PC20-2, PS20-2, PR33-2, PC50-2, and PC100-2.

Test conditions: 22°C: All values typical.
* Responsivity measured without window.
