The KZE series is a very low impedance series from United Chemi-Con that is different from the standard low impedance capacitors because of a special low resistivity electrolyte. This series has been upgraded to include a new 7mm case length with 5, 6.3 or 8mm case diameter. The KZE series is designed for use in computers, storage equipment, DC-DC converters, power supply control circuits for DVD-R/RW/RAM drives and 42V automotive battery systems. The KZE capacitors are also cost-effective replacements for low impedance chips. As an option the KZE series is available with environmentally friendly PET (polyester) sleeves and Pb-free materials.

The KZE series capacitors are non-solvent proof. Refer to the Mini-Glossary for cleaning guidelines and recommended cleaning agents that are compatible with United Chemi-Con products.
