

# IrDA Infrared Communication Module

## RPM882-H12

RPM882-H12 is an infrared communication module for IrDA Ver. 1.2 (Low Power). The infrared LED, PIN photo diode, LSI are all integrated into a single package. This module is designed with power down function and low current consumption at stand-by mode. The ultra small package makes it a perfect fit for mobile devices.

### ●Features

- 1) Infrared LED, PIN photo diode, LED driver & Receiver frequency formation circuit built in. Improvement of EMI noise protection because of Shield Case.
- 2) Applied to SIR (2.4 to 115.2kbps)
- 3) Surface mount type.
- 4) Power down function built in.
- 5) Low voltage operation as 1.5V of interface terminals to controller (TXD, RXD, PWDOWN, TX-RC).
- 6) Infrared remote control transmission driver built-in.

### ●Applications

Mobile phone, PDA, DVC, Digital Still Camera, Printer, Handy Terminal etc.

### ●Absolute maximum ratings (Ta=25°C)

| Parameter             | Symbol                          | Limits                       | Unit |
|-----------------------|---------------------------------|------------------------------|------|
| Supply voltage        | V <sub>max</sub>                | 7.0* <sup>1</sup>            | V    |
| Input voltage         | V <sub>in</sub> (4, 5, 6, 7pin) | -0.3 to V <sub>IO</sub> +0.3 | V    |
| Operation temperature | T <sub>opr</sub>                | -25 to +85                   | °C   |
| Storage temperature   | T <sub>stg</sub>                | -30 to +100                  | °C   |
| LED peak current      | I <sub>FP</sub>                 | 300* <sup>2</sup>            | mA   |
| Power dissipation     | P <sub>d</sub>                  | 300* <sup>3</sup>            | mW   |

\*<sup>1</sup> This applies to all pins basis ground pins (1pin)

\*<sup>2</sup> LED Peak Current< 90μs, On duty ≤ 50%

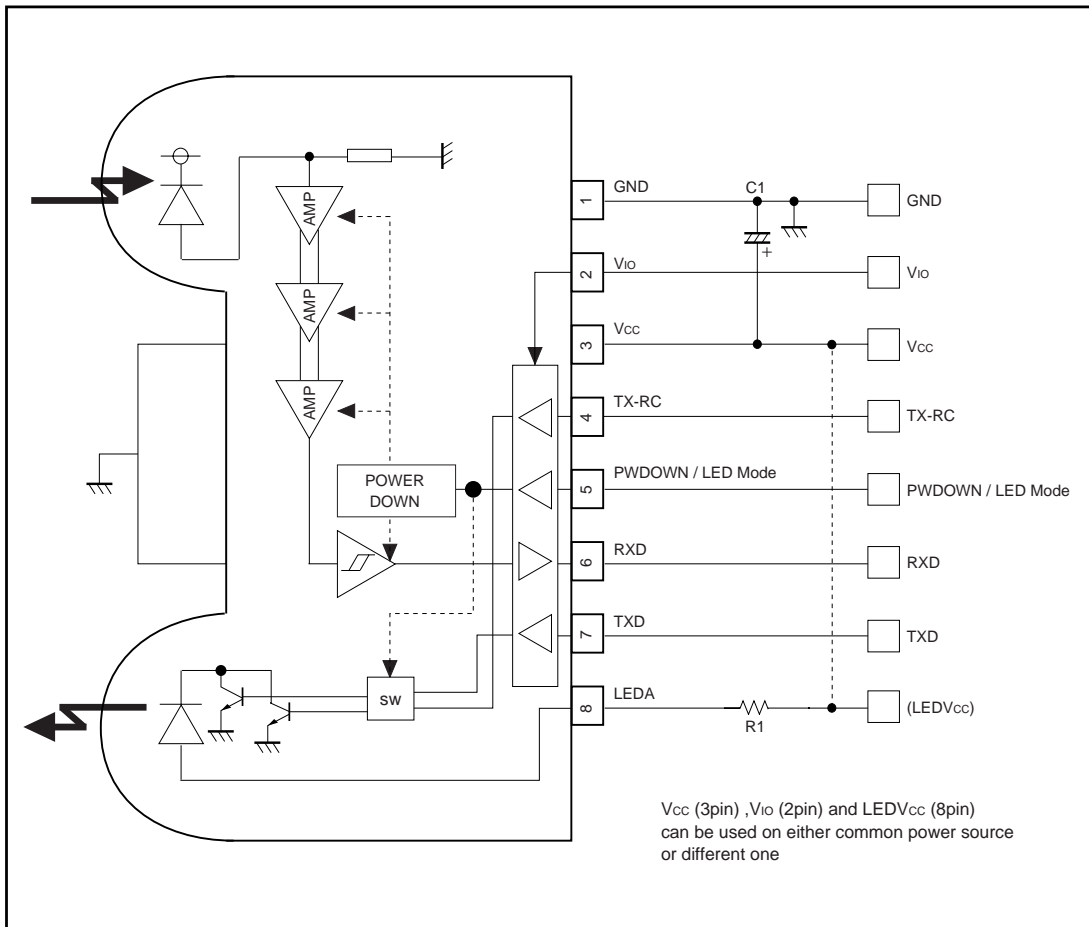

\*<sup>3</sup> When glass-epoxy board (70×70×1.6mm) mounted. In case operating environment is over 25°C, 4mW would be reduced per each 1°C stepping up.

### ●Recommended operating conditions (Ta=25°C)

| Parameter                | Symbol                         | Min. | Typ. | Max.            | Unit |
|--------------------------|--------------------------------|------|------|-----------------|------|
| Supply voltage           | V <sub>CC</sub>                | 2.4  | 3.0  | 3.6             | V    |
| Interface supply voltage | V <sub>IO</sub>                | 1.5  | 3.0  | V <sub>CC</sub> | V    |
| LED supply voltage       | V <sub>LEDV<sub>CC</sub></sub> | 2.6  | 3.0  | 5.5             | V    |

●LED Operation Mode Table

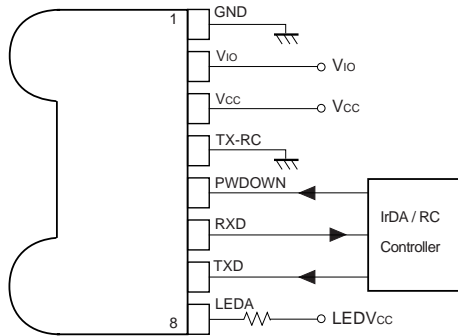

| PWDOWN (5pin) | TX-RC (4pin) | TXD (7pin) | LED Emitting Mode | IrDA Receiver Operation Condition |
|---------------|--------------|------------|-------------------|-----------------------------------|
| L             | L            | L          | OFF               | ON                                |
| L             | L            |            | IrDA              | ON                                |
| L             |              | L          | RC                | ON                                |
| H             | L            | L          | OFF               | OFF                               |
| H             | L            |            | RC                | OFF                               |
| H             |              | L          | RC                | OFF                               |

Notes) •Please be sure to set up the TX-RC (4pin) and the TXD (7pin) input to be "L" (under 0.3V) except transmitting data (for < 90μs, ON Duty ≤ 50%).  
 • of TX-RC (4pin) and TXD (7pin) in the table above is supposed to be the pulse input.  
 •When either TX-RC (4pin) input TXD (7pin) input keeps the state of "H" (more than approximately 48μs), LED will be turned off due to LED pulse width limiting circuit if the pulse is input from the other terminal. Therefore, don't use as the normal transmitting is impossible.  
 •Please input the pulse when both TX-RC (4pin) and TXD (7pin) are "L".

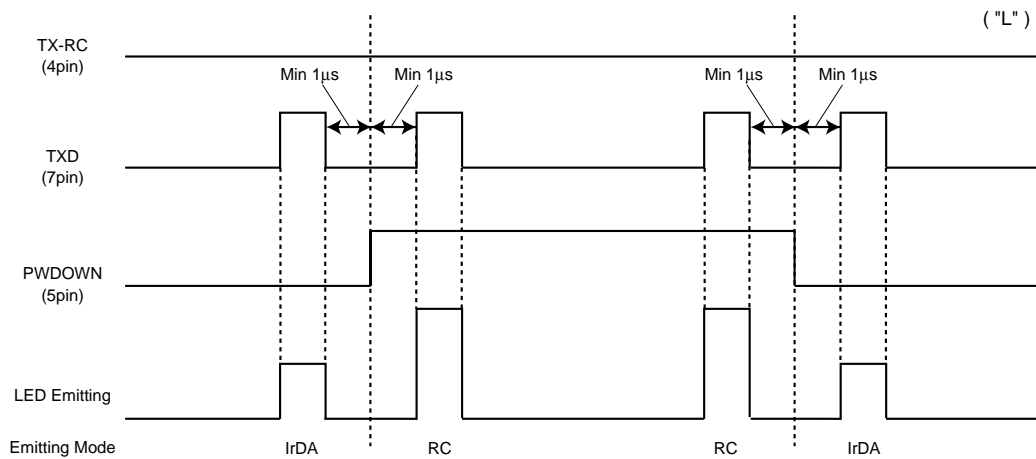

●Interface operating timing

(Emitting side)

(1) When TXD output for IrDA and TXD output for remote controller is 1 line.

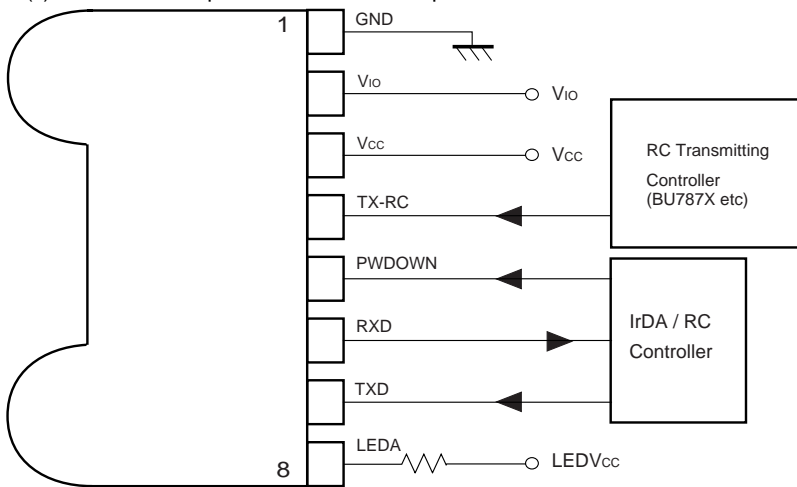

| Input  |     | Condition |                  |
|--------|-----|-----------|------------------|
| PWDOWN | TXD | LED Mode  | Receiver circuit |
| L      | L   | OFF       | ON               |
| L      |     | IrDA      | ON               |
| H      | L   | OFF       | OFF              |
| H      |     | RC        | OFF              |

\*If TX-RC or TXD input pulse width is wider than 48μs, output LED emitting pulse will be turn off approximately 48μs.

Photo Link Module

(2) When TXD output for IrDA and TXD output for controller are different lines.

(2-a) RC transmitting mode at IrDA receiver active condition.

| Input  |       |     | Condition |                  |
|--------|-------|-----|-----------|------------------|
| PWDOWN | TX-RC | TXD | LED Mode  | Receiver circuit |
| L      | L     | L   | OFF       | ON               |
| L      | L     |     | IrDA      | ON               |
| L      |       | L   | RC        | ON               |
| H      | L     | L   | OFF       | OFF              |

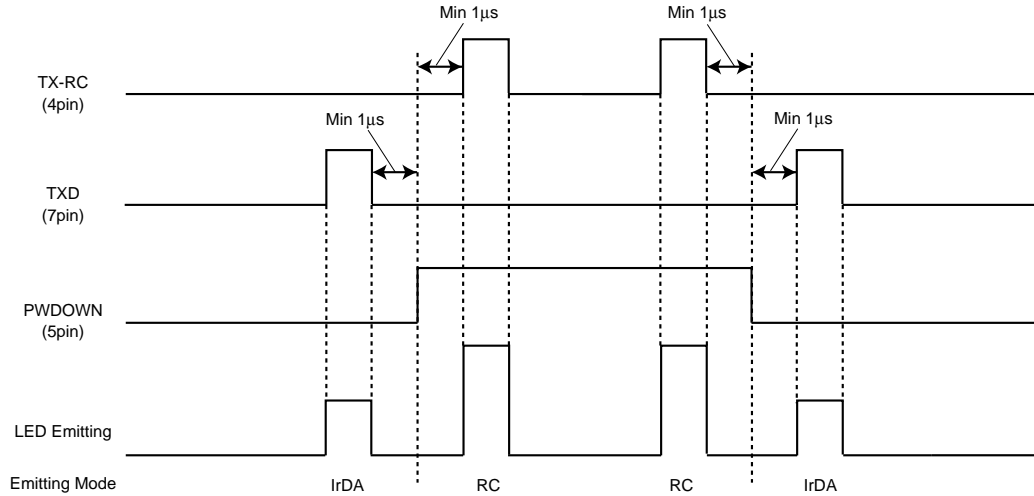

\*If TX-RC or TXD input pulse width is wider than 48µs, output LED emitting pulse will be turn off approximately 48µs.

Photo Link Module

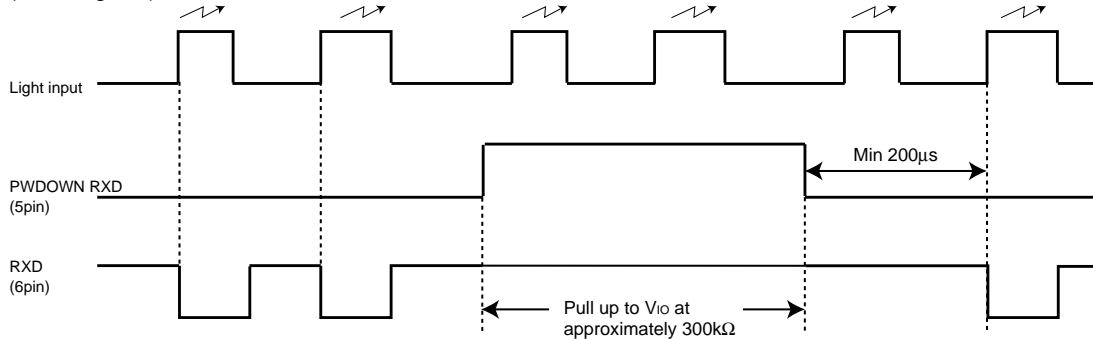

(2-b) RC transmit mode at IrDA receiver power down condition.

| Input  |   |   | Condition |                  |
|--------|---|---|-----------|------------------|
| PWDOWN | TX-RC   | TXD   | LED Mode  | Receiver circuit |
| L      | L   | L   | OFF       | ON               |
| L      | L   |  | IrDA      | ON               |
| H      |  | L   | RC        | OFF              |
| H      | L   | L   | OFF       | OFF              |

\*If TX-RC or TXD input pulse width is wider than 48µs, output LED emitting pulse will be turn off approximately 48µs.

(Receiving side)

\*RXD output width is fixed approximately 2.3µs.

Note RXD output become stable after 200µs since PWDOWN is changed from H to L.  
RXD output could be unstable at H to L within 200µs.

## ●Attached components

Recommended values

| Part symbol | Recommended value                                     | Notice  |
|-------------|---|---|
| C1          | 1μF, tantalum or ceramic<br>Ex.) TCFGA1A105M8R (ROHM) | Bigger capacitance is recommended with much noise from power supply |
| R1          | 4.7Ω±5%, 1/8W<br>(VLEDV <sub>CC</sub> =3V)            | At LED Emitting Duty=20%  |

[LED current set-up method for Remote control mode]

In case of using R1 with different condition from the above, formula is as follows :

LED resistance value : R1[Ω], LED average consumption current : ILED[mA], Supply voltage : VLEDV<sub>CC</sub>[V],

minimum necessary of irradiant intensity Ie1 [mW / sr]

(Including LED's distribution within ±15deg)

$$R1=166 \times (VLEDV_{CC}-1.28) / Ie1-5.0$$

$$ILED=Duty \times (VLEDV_{CC}-1.28) / (R1+3.5)$$

Duty : LED duty at emitting

\* Please set up to be ILED / Duty &lt; 250[mA] (Duty ≤ 50%)

\* At IrDA Mode, LED current is constantly approximately 40mA.

(Reference) In case of using R1, typical intensity (Ie1<sub>typ</sub>) and maximum intensity (Ie1<sub>max</sub>) on axis are described as below.

$$Ie1_{typ}=300 \times (VLEDV_{CC}-1.28) / (R1+3.5)$$

$$Ie1_{max}=600 \times (VLEDV_{CC}-1.28) / (R1+3.5)$$

## ●Notes

1) LEDV<sub>CC</sub> (8pin), V<sub>CC</sub> (3pin) and V<sub>IO</sub> (2pin)· Other power source can be used difference between LEDV<sub>CC</sub> and V<sub>CC</sub> and V<sub>IO</sub>.(V<sub>IO</sub> < V<sub>CC</sub> + 0.3V)

2) Caution in designing board lay-out

To get maximum potential from RPM882-H12, please keep in mind following instruction.

· The line of RXD (6pin) should be connected at backside via through hole close to RPM882-H12 pin lead. Better not to be close to photo diode side (1pin).

⇒This is to minimize feedback supplied to photo diode from RXD.

· As for C1 between 1-3 pin should be placed close to RPM882-H12.

· Better to be placed more than 1.0cm in radius from photo diode (pin1 side) and also away from the parts which generates noise, such as DC/DC converter.

3) Notes

· Please be sure to set up the TX-RC (4pin) and the TXD (7pin) input to be "L" (under 0.3V) except transmitting data (for &lt; 90μs, ON duty ≤ 50%).

· Power down current might increase if exposed by strong light (ex. direct sunlight) at powerdown mode.

· Please use by the signal format at IrDA operating mode which is specified by IrDA Ver1.2 (2.4k to 115.2kbps). There might be on error if used by different signal format.

· Please pay attention to the lens carefully.

Dusts of scratch on the lens may effect the characteristics of product. Please handle it with care.

Photo Link Module

4) Eye safe

- IEC60825-1 (IEC60825-1 amendment2), Class 1 Eye Safe.

5) LED current derating and ambient temperature

The relation between LED peak current and maximum ambient temperature is shown below.  
 We recommend you to use within the range as indicated in below.

When glass-epoxy board (70×70×1.6mm) mounted.

### Notes

- No technical content pages of this document may be reproduced in any form or transmitted by any means without prior permission of ROHM CO.,LTD.
- The contents described herein are subject to change without notice. The specifications for the product described in this document are for reference only. Upon actual use, therefore, please request that specifications to be separately delivered.
- Application circuit diagrams and circuit constants contained herein are shown as examples of standard use and operation. Please pay careful attention to the peripheral conditions when designing circuits and deciding upon circuit constants in the set.
- Any data, including, but not limited to application circuit diagrams information, described herein are intended only as illustrations of such devices and not as the specifications for such devices. ROHM CO.,LTD. disclaims any warranty that any use of such devices shall be free from infringement of any third party's intellectual property rights or other proprietary rights, and further, assumes no liability of whatsoever nature in the event of any such infringement, or arising from or connected with or related to the use of such devices.
- Upon the sale of any such devices, other than for buyer's right to use such devices itself, resell or otherwise dispose of the same, no express or implied right or license to practice or commercially exploit any intellectual property rights or other proprietary rights owned or controlled by
- ROHM CO., LTD. is granted to any such buyer.
- Products listed in this document are no antiradiation design.

The products listed in this document are designed to be used with ordinary electronic equipment or devices (such as audio visual equipment, office-automation equipment, communications devices, electrical appliances and electronic toys).

Should you intend to use these products with equipment or devices which require an extremely high level of reliability and the malfunction of which would directly endanger human life (such as medical instruments, transportation equipment, aerospace machinery, nuclear-reactor controllers, fuel controllers and other safety devices), please be sure to consult with our sales representative in advance.

#### About Export Control Order in Japan

Products described herein are the objects of controlled goods in Annex 1 (Item 16) of Export Trade Control Order in Japan.

In case of export from Japan, please confirm if it applies to "objective" criteria or an "informed" (by MITI clause) on the basis of "catch all controls for Non-Proliferation of Weapons of Mass Destruction.
