

Features

- Optimizes data transmission in ECL systems through proper termination between drivers and receivers
- Minimizes overshoot, undershoot, and ringing while increasing noise immunity
- Provides decoupling capacitors
- RoHS compliant*

For information on ECL Terminators, download Bourns' ECL Terminator Application Note.

800 Series - RC Networks ECL Terminator Circuits

General Description

Digital systems incorporating Emitter Coupled Logic (ECL) or other ultra-high switching speed logic families will require signal termination to prevent transmission line effects such as reflections and ringing due to fast transition times

Bourns 800 series resistor capacitor networks are ideal for termination of high speed transmission lines. Each network is composed of resistors for parallel termination and bypass capacitor(s) for cross talk noise reduction.

The 5 conformal coated SIP circuit variations offered are as follows.

Electrical Characteristics

Resistance Tolerance	±5 %
Resistance Power	0.1 watt
Capacitance Tolerance	±20 %
Capacitor Dielectric Type	
Capacitance Voltage Rating	

Physical Characteristics

Clammability

Flammability	oniorms to or 94v-0
Leadframe	Copper (Olin 194)
Body Material	Epoxy/Anhydride
	(Conformal Material)
Custom Resistance	Range
10	ohms to 50K ohms
Custom Capacitance	e Range

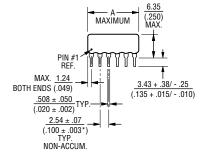

Conforma to III 041/

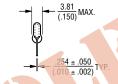

......39 pF to 100,000 pF NPO and Z5U dielectrics available on a custom basis.

For Standard Values Used in Capacitors, Inductors, and Resistors, click here.

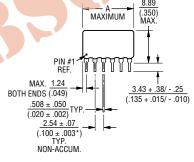

Product Dimensions

MEDIUM PROFILE

HIGH PROFILE

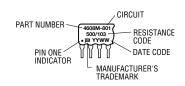

Governing dimensions are metric. Dimensions in parentheses are inches and are approximate.

*Terminal centerline to centerline measurements made at point of emergence of the lead from the body.

Typical Part Marking

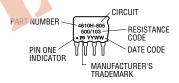

801 AND 802

Represents total content. Layout may vary.

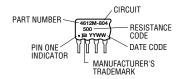

803 AND 805

Represents total content. Layout may vary.

804

Represents total content. Layout may vary.

Features

- Minimizes space and routing problems, and reduces manufacturing cost per installed resistive function
- Increases board yields and reliability by reducing component count

800 Series - RC Networks ECL Terminator Circuits

BOURNS

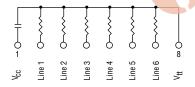

801 8, 10 and 12 Pin SIP (4608M-801-RC/CCL)

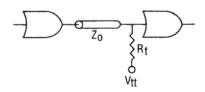

Designed to terminate 6 to 10 transmission lines using parallel termination techniques. Standard resistance values include 50, 68, 75, 82, 90 or 100 ohms and are chosen to match the characteristic impedance (Z_0) of the transmission line. A 0.01 μ F capacitor is provided to help maintain a solid power supply level within the network package, mitigating any cross talk or feedthrough effects. Values for R and C not shown in the following table are available on a custom basis.

Standard 801 Part Numbers

C	
±20 %	Bourns Part Number
0.01 μ F	4608M-801-500/103L
0.01 μF	4608M-801-680/103L
0.01 μF	4608M-801-750/103L
0.01 μF	4608M-801-820/103L
0.01 μF	4608M-801-900/103L
0.01 μ F	4608M-801-101/103L
	±20 % 0.01 μF 0.01 μF 0.01 μF 0.01 μF 0.01 μF

801 Electrical Schematic and Application

802 10 Pin SIP

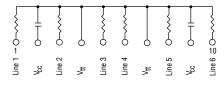

(4610M-802-RC/CCL)

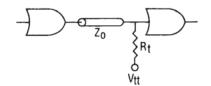

Designed to terminate 6 transmission lines using parallel termination techniques. Popular resistance values include 50, 68, 75, 82, 90 or 100 ohms and are chosen to match the characteristic impedance (Z_0) of the transmission line. Two 0.01 μ F capacitors are provided to reduce cross talk between lines and to decrease network package inductance. Values for R and C not shown in the following table are available on a custom basis.

Standard 802 Part Numbers

R ±2 %	C ±20 %	Bourns Part Number
50 Ω	0.01 μF	4610M-802-500/103L
68 Ω	0.01 μ F	4610M-802-680/103L
75 Ω	0.01 μF	4610M-802-750/103L
82 Ω	0.01 µF	4610M-802-820/103L
90 Ω	0. 01 μ F	4610M-802-900/103L
100 Ω	0.01 μF	4610M-802-101/103L

802 Electrical Schematic and Application

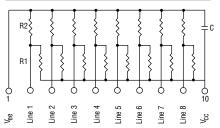

803 8, 10 and 12 Pin SIP 10K ECL (4610H-803-ZoC/CCL)

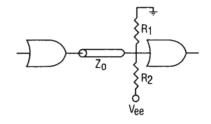

Designed to terminate 6 to 10 transmission lines using Thevenin equivalent parallel termination techniques in systems using 10K ECL. Popular impedance values include 50, 70, 75, 80, 90, 100, 120, 150 or 200 ohms. Standard values for R1 and R2, based on Z_O, have been chosen to accommodate 10K ECL designs. A 0.1 μF capacitor is provided to reduce cross talk noise within the network package. Values for Z_O and C not shown in the following table are available on a custom basis. This type of termination is an alternative to parallel termination used when a separate Vtt power supply is not available.

Standard 803 Part Numbers

Zo			C	
±2 %	R1	R2	±20 %	Bourns Part No.
50 Ω	81 Ω	130 Ω	0.1 μF	4610H-803-500/104L
70 Ω	113 Ω	182 Ω	0.1 μF	4610H-803-700/104L
75 Ω	121 Ω	195 Ω	0.1 μF	4610H-803-750/104L
80 Ω	130 Ω	208 Ω	0.1 μF	4610H-803-800/104L
90 Ω	146 Ω	234 Ω	0.1 μF	4610H-803-900/104L
100 Ω	162 Ω	260 Ω	0.1 μF	4610H-803-101/104L
120 Ω	194 Ω	312 Ω	0.1 μF	4610H-803-121/104L
150 Ω	243 Ω	390 Ω	0.1 μF	4610H-803-151/104L
200 Ω	325 Ω	520 Ω	0.1 μF	4610H-803-201/104L

803 Electrical Schematic and Application

800 Series - RC Networks ECL Terminator Circuits

BOURNS

804 12 Pin SIP ECL

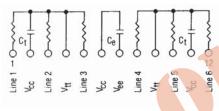

(4612M-804-RCL)

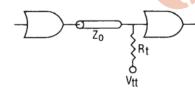

Designed to terminate 6 transmission lines using parallel termination techniques. Popular resistance values include 50 or 100 ohms. A 0.1 μF capacitor is provided for connection to V_{ee} . Two 0.01 μF capacitors are provided for connection to Vtt. Values for R and C not shown in the following table are available on a custom basis.

Standard 804 Part Numbers

R	Ct	Ce	
±2 %	±20 %	±20 %	Bourns Part Number
50 Ω	0.01 μF	0.1 μ F	4612M-804-500L
100 Ω	$0.01~\mu F$	0.1 μ F	4612M-804-101L

804 Electrical Schematic and Application

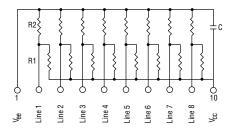

805 8, 10 and 12 Pin SIP 100K ECL (4610H-805-ZoC/CCL)

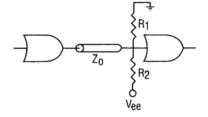

Designed to terminate 6 to 10 transmission lines using Thevenin equivalent parallel termination techniques in systems using 100K ECL. Popular impedance values include 50, 70, 75, 80, 90, 100, 120, 150 or 200 ohms. Standard values for R1 and R2, based on Z₀, have been chosen to accommodate 100K ECL designs. A 0.1 μF capacitor is provided to reduce cross talk noise within the network package. Values for Zo and C not shown in the following table are available on a custom basis. This type of termination is an alternative to parallel termination used when a separate Vtt power supply is not available.

Standard 805 Part Numbers

	Zo			C	
	±2 %	Rí	R2	±20 %	Bourns Part No.
	50 Ω	90 Ω	113 Ω	0.1 μF	4610H-805-500/104L
	70 Ω	126 Ω	158 Ω	0.1 μF	4610H-805-700/104L
	75 Ω	135 Ω	169 Ω	0.1 μF	4610H-805-750/104L
1	80 Ω	144Ω	180 Ω	0.1 μF	4610H-805-800/104L
	90 Ω	161 Ω	202 Ω	0.1 μF	4610H-805-900/104L
	100 Ω	180 Ω	225 Ω	0.1 μF	4610H-805-101/104L
	120 Ω	216 Ω	270 Ω	0.1 μF	4610H-805-121/104L
	150 Ω	270 Ω	338 Ω	0.1 μF	4610H-805-151/104L
	200 Ω	360 Ω	450 Ω	0.1 μF	4610H-805-201/104L

805 Electrical Schematic and Application

How To Order 801

apacitance Code

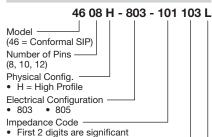

- rst 2 digits are significant
- Third digit represents the number of zeros to
- Units = picofarads

Termination

Lead Free (Sn/Ag/Cu-plated)

Consult factory for other available options.

How To Order 803 and 805

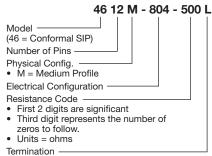

- Third digit represents the number of zeros to follow.
- Units = ohms
- Capacitance Code
- First 2 digits are significant Third digit represents the number of zeros to follow.
- Units = picofarads

Termination
