

265 V PTC Thermistors For Overload Protection

FEATURES

- Wide range of trip and non-trip currents:
From 11 mA up to 800 mA
- Small ratio between trip and non-trip currents
($I_t/I_{nt} = 1.5$ at 25 °C)
- High maximum inrush current (up to 5.5 A)
- Leaded parts withstand mechanical stresses and vibration
- UL file E148885 according to XGPU standard UL1434
- UL approved PTCs are guaranteed to withstand severe test programs
 - Long-life cycle tests (over 5000 trip cycles)
 - Long-life storage tests (3000 h at 250 °C)
 - Electrical cycle tests at low ambient temperatures (- 40 °C or 0 °C)
 - Damp-heat and water immersion tests
 - Overvoltage tests at up to 200 % of rated voltage
- Compliant to RoHS directive 2002/95/EC and in accordance to WEEE 2002/96/EC

RoHS
COMPLIANT

APPLICATIONS

Over-temperature/over-load protection:

- Telecommunications
- Automotive systems
- Industrial electronics
- Consumer electronics
- Electronic data processing

DESCRIPTION

These directly heated thermistors have a positive temperature coefficient and are primarily intended for overload protection. They consist of a metallized ceramic disk with two tinned brass or copper clad steel leads reflow soldered to it and coated with a high temperature silicone lacquer. Leadless disks and leaded disks without coating are available on request.

MOUNTING

The PTC Thermistors are suitable for processing on automatic insertion equipment.

Typical soldering

235 °C; duration: 5 s (Pb-bearing)

245 °C, duration: 5 s (Lead (Pb)-free)

Resistance to soldering heat

260 °C, duration: 10 s max.

MARKING

Only the grey lacquered thermistors with a diameter of 8.5 mm to 20.5 mm are marked with BC, R_{25} value (example 1R9) on one side and I_{nt} , V_{max} on the other side.

QUICK REFERENCE DATA		
PARAMETER	VALUE	UNIT
Holding current	0.011 to 0.8	A
Resistance at 25 °C (R_{25})	2.1 to 3000	Ω
I_{max}	0.8 to 5.5	A
Switch temperature	140	°C
Maximum voltage (RMS or DC)	265	V
Operating temperature range at max. voltage	0 to 70	°C
Climatic category	25/125/56

Notes

- For bulk parts replace x by "5" and y by "B"
- For taped on reel parts replace x by "6" and y by "T"

CURRENT DEVIATION AS A FUNCTION OF THE AMBIENT TEMPERATURE

VOLTAGE DERATING AS A FUNCTION OF AMBIENT TEMPERATURE

ELECTRICAL CHARACTERISTICS I_{max.} AS A FUNCTION OF VOLTAGE

I_{max.} as stated in the electrical data and ordering information tables, is the maximum overload current that may flow through the PTC when passing from the low ohmic to high ohmic state at rated voltage.

When other voltages are present after tripping, the I_{max.} value can be derived from the above I_{max.} as a function of voltage graph. Voltages below V_{rated} will allow higher overload currents to pass the PTC.

TYPICAL TRIP-TIME AS A FUNCTION OF TRIP CURRENT RATIO

- Curve 1: Ø D_{max.} = 20.5 mm
- Curve 2: Ø D_{max.} = 16.5 mm
- Curve 3: Ø D_{max.} = 12.5 mm
- Curve 4: Ø D_{max.} = 10.5 mm
- Curve 5: Ø D_{max.} = 8.5 mm
- Curve 6: Ø D_{max.} = 7.0 mm
- Curve 7: Ø D_{max.} = 5.0 mm

Measured in accordance with "IEC 60738".

Trip-time or switching time (t_s)

To check the trip-time for a specific PTC, refer to the Electrical Data and Ordering Information tables for the value I_{nt}. Divide the overload or trip current by this I_{nt} and you realize the factor I_t/I_{nt}. This rule is valid for any ambient temperature between 0 °C and 70 °C. Adapt the correct non-trip current with the appropriate curve in the Current Deviation as a Function of the Ambient Temperature graph. The relationship between the I_t/I_{nt} factor and the switching time is a function of the PTC diameter; see the above graphs.

Example

What will be the trip-time at I_{ol} = 0.8 A and T_{amb} = 50 °C of a thermistor type 2381 661 51713; 22 Ω; Ø D_{max.} = 8.5 mm:

I_{nt} from the table: 170 mA at 25 °C

I_{nt}: 170 x 0.87 = 148 mA (at 50 °C).

Overload current = 0.8 A; factor I_t/I_{nt}: 0.8/0.148 = 5.40. In the typical trip-time as a function of trip current ratio graph, at the 8.5 mm line and I_t/I_{nt} = 5.40, the typical trip-time is 3.0 s.
