|-----------------------------------|-----------------------|-----------------------|-----------------------|
| Operating Temperature Range | -40 to 125 °C | | |
| Rated Maximum Power Dissipation*1 | 33 mW | 66 mW | 100 mW |
| Dissipation Factor*2 | approximately 1 mW/°C | approximately 2 mW/°C | approximately 3 mW/°C |

*1 Rated Maximum Power Dissipation : The maximum power that can be continuously applied at the rated ambient temperature.
 · The Maximum Power Dissipation under ambient temperature 25 °C or less is the same with the rated maximum power dissipation, and Maximum power dissipation beyond 25 °C depends on the Decreased power dissipation curve.
 · Please see "Operating Power" for details paging 371.

*2 Dissipation factor : The constant amount power required to raise the temperature of the Thermistor 1 °C through self heat generation under stable temperatures.
 · Dissipation factor is the reference value when mounted on a glass epoxy board (1.6 mmT).
