

# M Series Pin and Socket Connectors

# Tyco Electronics

# **M** Series Connectors

## **Product Facts**

- Most connectors intermateable with connectors made to MIL-C-28748 requirements
- Wide range of connector styles and sizes: standard connectors (unloaded), posted connectors (preloaded) and special application connectors (unloaded)
- Complete line of accessory hardware for fastening, protecting, guiding, shielding, strain relief and keying
- A variety of contacts: signal, power, coaxial and posted versions - many are interchangeable and can be intermixed in the same connector housing
- Full complement of application tooling for wire crimp and posted terminations hand tools, semiautomatic tooling and fully automatic machines provide highly reliable, low cost terminations to meet production requirements

## **Need More Information?**

# Introduction

#### AMP M Series connectors are one of the most versatile and complete pin and socket connector lines available today.

From the basic molded plastic housing, a connector can be built up with a wide choice of contacts and hardware to serve in applications ranging from sophisticated computers, medical instrumentation and military ground support equipment to rugged truck transmissions.

## How this M Series catalog is divided

The M Series catalog is divided into six categories:

- Application section
- Contacts/Tooling
- Standard Connector Housings
- Posted Connector Housings
- Special Application
- Connector Housings • Hardware

Following is a brief summary of each of the six categories.

#### Knowing what you need to meet your application is made easy

Eight applications have been illustrated with selection charts from pages 10 through 25. These charts will assist you to select the appropriate connector housing as well as the necessary hardware. Each base part number is listed in the numerical index on pages 94, 95 in order to find complete information about a particular part.

#### Contacts of various types provide different functions in M Series connector housings

Included are contacts for signal and power applications, for coaxial cable and posted versions for backpanel wiring. A full complement of application tooling is available to meet any production requirement for terminating the crimp-type contacts and wiring posted

contacts. A description of each contact type is presented on pages 26 through 29. Application tooling for these contacts is described on pages 90 and 91.

#### Standard connectors

Standard connectors are comprised of unloaded housings that accept a variety of crimp, solder and posted contacts. All standard connector housings will accept pins and/or sockets, permitting various combinations of contact loading. Standard connectors are described on pages 44 through 51.

## **Posted connectors**

Posted connectors are preloaded with post-type contacts that accept TERMI-POINT Clip or wrap-type terminations. All posted connectors are described on pages 52 through 60.

## Special Application connectors

Connectors for special application are available in

- the following configurations: • V.35
- High Current
- Mixed Contact Connectors
- High Voltage
- RFI/EMI Shielded
- Grounding Blocks

Special Application Connectors are described on pages 61 through 77.

#### The right hardware for the entire M Series connector line

Hardware is available to provide fastening, protection, shielding, guiding, strain relief and keying capabilities for the entire M Series connector line. Application charts for properly selecting hardware are presented on pages 10 through 25. Detailed information on hardware is located on pages 78 through 89.

4

Catalog 82003 Revised 06-08 Dimensions are in millimeters and inches unless otherwise specified. Values in brackets are equivalent U.S. Customary Units. # Introduction (Continued)

## What makes the M Series connector line so versatile and special for a wide variety of applications?

- Compatibility-Most connectors intermateable with connectors made to MIL-C-28748 requirements.
- Wide range-Choice of connector styles and sizes: standard connectors (unloaded), posted connectors (preloaded) and special application connectors.
- Complete line-Full line of accessory hardware for fastening, protecting, guiding, strain relief and keying.
- Variety of contacts-Signal, power, coaxial, and posted versions-many are interchangeable and can be intermixed in the same connector housing.
- Full complement of application tooling-For wire crimp and posted terminationshand tools, semiautomatic tooling and fully automatic machines provide highly reliable, low cost terminations to meet production requirements.

## How to choose the appropriate connector/contact/ hardware combination

Choosing the appropriate connector/contact/hardware combination is essential to the proper function of any AMP M Series connector. First, a customer must evaluate each individual application with regards to: wire size(s); number of circuits; available space; fastening methods; and needs for protection, shielding, guiding, strain relief and keying. Then, the customer must consider the following factors to make the appropriate selection of M Series connectors and related components.

## A - Determine Connector Type-

This decision is based on the selected contact types, circuit density requirements and, if posted connectors are desired, in-plant production capabilities for wiring connectors using hand tools or semiautomatic tooling. Detailed specifications of the various M Series connectors are presented on the following pages: Standard connectors (pages 44 through 51), Posted connectors (pages 52 through 60), Special Application connectors (pages 61 through 77).

## B - Determine Hardware-

This decision is based on the selected connector types, and the individual application requirements for fastening, protection, shielding, guiding, strain relief and keying. To assist customers in determining the proper hardware to use, hardware selection information has been formulated for each connector type. This information is located on pages 10 through 25. Complete specifications of each hardware component are presented in the Hard-ware section of the catalog (pages 78 through 89).

### C - Determine Contact Type -This decision is based on wire size(s) and reliability and cost requirements of an application, as well as the customer's inplant production capabilities. Complete specifications, including accepted wire sizes and available platings of all pin and socket contacts, are presented in the Contacts section of the catalog (pages 30 through 43). Application tooling for crimpand post-type contacts is presented on pages 90 and 91).

**Material Specifications** 

# **Material Specifications**

#### Contacts

The material composition and construction of AMP contacts encompass varying price ranges and performance characteristics. Specific materials and available platings and plating thicknesses of each contact type are provided on individual contact pages in the Contact section (pages 30 thru 43). A brief description of each contact type is presented on pages 26 through 29. Also, typical performance data of M Series connectors and contacts is shown below.

#### Housings

M Series connector housings are made of either diallyl phthalate (blue), general purpose phenolic (black) or polyester (black).

Diallyl phthalate housings are molded of material per MIL-M-14, Type SDG. These housings are ideally suited for use where adverse environmental conditions are an important factor. Their advantages include exceptional stability; excellent resistance to acids, alkalies and solvents; low moisture absorption; and good dielectric strength.

Phenolic housings are molded of material per

MIL-M-14, Type CFG. The performance characteristics of these housings make them an excellent choice for applications in which exceptional resistance to acids, alkalies or solvents is not of prime concern. Polyester housings are molded from a high temperature thermoplastic material per ASTM D3220. Polyester housings provide the high temperature characteristics of diallyl phthalate and phenolic, but with a higher impact strength.

#### Hardware

A variety of materials such as plated steel, stainless steel and aluminum. are used in the construction of M Series connector hardware. This provides for the proper operation and durability of each hardware component, while offering a choice of economies to satisfy particular application requirements. The materials of each hardware component are specified on the individual hardware component pages in the Hardware section (pages 78 through 89).

#### Performance Data

#### **Temperature Rating:** Phenolic Housings,

-55°C to +150°C Diallyl Phthalate Housings, -65°C to +125°C Polyester, -55°C to +130°C

Flammability Ratings: UL94V-0

#### **Dielectric Withstanding** Voltage (at sea level):

Type II Contacts, 1500 VAC, RMS Type III+ Contacts, 900 VAC, RMS

#### Durability (Mating/Unmating):

Types II and III+ Contacts, Gold Plated: 500 cycles; Types II and III+ Contacts, Tin Plated: 50 cycles: Type I Contacts. Gold Plated: 100 cycles

Note: For detailed information on the above performance data and further information on other performance data such as Insulation Resistance, Thermal Shock, Moisture Resistance, Vibration and Physical Shock, request AMP Product Specification No. 108-10001.

# **Contract Carrying Capabilities**

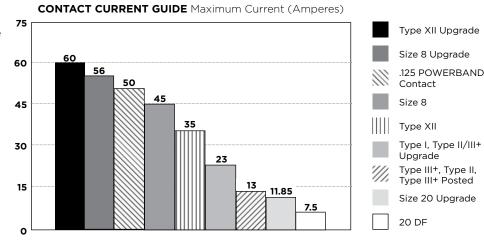

The total current capacity of each contact in a given connector is dependent upon the heat rise resulting from the combination of electrical loads of the contacts in the connector arrangement and the maximum ambient temperature in which the connector will be operating. Caution must be taken to ensure that this combination of conditions does not cause the internal temperature of the connector to exceed the maximum operating temperature of the housing material. Several variables which must be considered when determining this maximum current capability for your application are:

• Wire Size - Larger wire will carry more current since it has less internal resistance to current flow and generates less heat. The wire also conducts heat away from the connector.

#### Current Rating Verification Can a contact rated at 10 amps carry 10 amps?

Maybe yes, but probably not. The reason lies in the test conditions used to rate the contact. If these conditions do not adequately reflect the application conditions, the actual allowable current levels may be lower than specified levels. For example, many manufacturers, including Tyco, test a single contact in air. This gives an accurate measure of the basic currentcarrying capacity of the contact. Use the contact alone in air and it can certainly carry 10 amperes. Use it in a multi-position connector surrounded by other current-carrying contacts or in high ambient temperatures, and the contact should carry less current.

Similarly, as the contact ages and stress relaxation, environmental cycling, and other degradation factors take their toll, the contact's currentcarrying capacity decreases. A prudent design must set current levels for such end-ofdesign-life (EODL) conditions.

• Connector Size - In general, with more circuits in a connector, less current per contact can be carried.

Practical current-carrying capacity is not an absolute, but an application-dependent condition.

## New Method Simplifies Ratings

To help the designer set the appropriate current level, Tyco has developed a method of specifying current-carrying capacity. This method takes into account the various application factors that influence current rating.

#### The method can be summarized as follows:

- The contact is aged to EODL conditions by durability cycling, thermal cycling, and environmental exposure.
- The contact's resistance stability is verified.
- •The current necessary to produce the specified temperature rise is measured. This T-rise is usually 30°C.
- A rating factor is determined to allow derating of multiple contacts in the same housing and for different conductor sizes.

• Current Load Distribution -Spreading those lines with greater current loads through-out the connector, particularly around the outer perimeter, will enhance heat dissipation.

## Temperature

One other factor influencing current levels is the maximum operating temperature, for example, 105°C. If the application has a high ambient temperature (over 75°C) the contact's T-rise is limited by the maximum operating temperature. For example, an application temperature of 90°C limits the contact T-rise to 15°C. Since current produces heat (the I<sup>2</sup>R law), the current must be lowered to limit the T-rise.

A contact's T-rise depends not only on its I<sup>2</sup>R Joule heating, but also on its ability to dissipate the heat. Consider a contact in a multi-contact housing. Joule heating in multiple contacts will raise the local ambient temperature. Since the contact will not be able to dissipate its own heat as well by convection, the maximum T-rise will be realized at a lower current level. Conse-quently, the allowable current level must be lower to maintain an acceptable T-rise.

For a given connector, the current level will be set by the loading density. A connector • Ambient Temperature -With higher ambient temperatures, less current can be carried.

containing 50% current-carrying contacts will permit higher currents (per contact) than a connector will at 75% loading. The loading percentage assumes an even distribution of contacts within the housing. If all 10 contacts are grouped together in one section of a 20-position connector, the loading density may approach 100%.

## The Importance of EODL

As stated, T-rise in a contact depends on both resistance and current. As it ages, a contact's resistance will increase. The contact designer will specify a maximum resistance for the contact, this level is the end-of-design-life resistance. Before the contact is tested for current, Tyco subjects it to a sequence of tests that exercises the major failure mechanisms and thereby simulates EODL conditions. Conditioning includes mating cycling, industrial mixed-flowing gases, humidity and tempera-ture cycling, and vibration to sequentially introduce wear. corrosion. stress relaxation, and mechanical disturbance.

Catalog 82003 Revised 06-08 Dimensions are in millimeters and inches unless otherwise specified. Values in brackets are equivalent U.S. Customary Units. www.tycoelectronics.com

# **Presentation - Example of New Current Rating Format**

The presentation of current- carrying capacity in AMP product specifications includes two parts:

Electronics

**₹** <sub>Tyco</sub>

**Current Carrying Capabilities** 

- First, a base curve showing current levels versus T-rise for a single circuit and the largest wire size (See figure 1). This represents the maximum current capacity of the contact. The curve is usually flat up to 75°C ambient and then drops off. Up to 75°C, the 30°C T-rise limits the amount of current, and above 75°C the current must be reduced to keep the combination of ambient temperature and T-rise from exceeding the maximum operating temperature of 105°C.
- Next are rating factors; a table of multipliers to account for connector loading and for smaller wire sizes (See figure 2). The designer first determines the base current for the ambient conditions of the application; then multiplies this base current by the rating factors to find the current level for the application's loading factor and wire size.

## **Practical Values**

The current-rating method gives designers practical values applicable to their applications. While the specified current levels for a contact may be lower than for other testing methods, they are more realistic and simplify the system design process. "Spec-manship" is replaced by a realistic assessment of the current-carrying capacity of a

## Connector/Contact Acceptability

As previously stated, choosing the appropriate connector/contact combination is fundamental to the successful function of all connectors. The Selection Chart, shown at right, is designed to simplify your choice of connectors and their acceptable contacts. Once vou have selected the wire size, current-carrying capacity need, number of positions required, and the type of contacts needed in vour choice of connector, refer to this matrix for a quick look at exactly what is acceptable in a given connector type.

**Note:** Data is not typical of a specific M Series connector configuration. For specific current rating information based on % connector loading, contact Tyco Electronics.

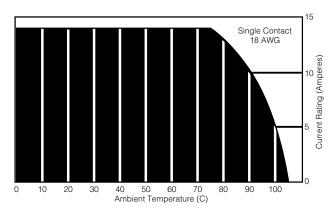

To demonstrate the method of specifying current, consider the following application conditions; an ambient temperature of 65°C, a 50% loading of contacts in the housing, and 20 AWG [0.6mm<sup>2</sup>] wire.

- From Figure 1, the base current rating is 14 ampere with 18 AWG [0.8mm<sup>2</sup>] wire.
- Figure 2, the rating factor for 50% loading and 20 AWG [0.6mm<sup>2</sup>] wire is 0.68.
- The specific rating for this application is the product of the base rating and the rating factor: 14 x 0.68 = 9.5 ampere
- Each of the contacts can carry 9.5 ampere.
- However, if the ambient temperature is 80°C the allowable T-rise becomes 25°C. The base current must be lowered to 12.8 ampere so that the 105°C maximum operating temperature is not exceeded. The current rating then becomes:

12.8 x 0.68 = 8.7 ampere.

contact under varying conditions of temperature, connector loading, and wire size.

Specific current-carrying data based on EOL and % loading is available from Tyco Electronics Corporation. Please contact your local Sales Engineer or call Tyco Electronics Corporation.

Graph shows the relationship between base current, ambient temperature, and contact T-rise.

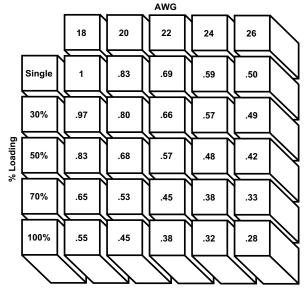

Figure 2

Rating factors allow the base current to be adjusted for various connector loading and wire sizes.

# How to Use the M Series Connector Catalog

The information in this catalog has been arranged to assist the customer in selecting the connector and associated hardware that best satisfies their requirements.

Four cable-to-cable and four cable-to-panel applications utilizing the various types of fastening, guiding and protective hardware have been illustrated on pages 10 through 25.

After selecting the appro-priate application to fit a particular requirement, refer to the indicated pages for component selection.

Posted connectors and Special Application connectors can be substituted for Standard Connectors where indicated. Noted under each Special Application Connector is the standard size hardware used for that connector. Substitute into the appropriate column of the component selection charts.

The main portion of the catalog is divided into five basic sections: contacts, standard connectors, posted connectors, special application connectors and hardware. These sections contain brief descriptions, dimensions and other technical information. The remainder of the catalog contains application tooling information, a technical documents list and a numerical index which references pages covering all cataloged part numbers.

- 3. Select part numbers required for the application listed in the column below the number of positions.

If a part number is not listed for a particular item, it is not available.

If more than one part number is listed for a particular hardware item, choose the one which best fits your application.

- 4. Dimensional information is available on the indicated pages under description column.
- 5. Select Contacts: Type II (page 30), Type III+ (pages 31 through 35) or Subminiature Coaxial (pages 40, 41).

## Special application housings may be substituted for these standard housings. See Special Application Section.

This cable-to-cable application utilizes locking springs, strain relief clamps, a pin hood for pin protection and guide hardware

The 34 and 50 position connectors can be used with either center or corner guide hardware. If center guide hardware is used, an additional four 4-40 screws, nuts and lockwashers are required to secure the locking springs. Corner guides require four guide pins and four guide sockets for each mated pair of connectors.

Electronics

- 2. Find the appropriate column for the number of positions required.
- 3. Select part numbers required for the application listed in the column below the number of positions.

If a part number is not listed for a particular item, it is not available.

If more than one part number is listed for a particular hardware item, choose the one which best fits your application.

- 4. Dimensional information is available on the indicated pages under description column.
- 5. Select Contacts: Type II (page 30), Type III+ (pages 31 through 35) or Subminiature Coaxial (pages 40, 41).

## Special application housings may be substituted for these standard housings. See Special Application Section.

This cable-to-cable application utilizes locking springs, one-piece shields, a pin hood for pin protection and guide hardware. The shields are available with both 180° and 90° cable exits. The 180° shields are available in a long version which provides pin protection in lieu of a pin hood.

A short shield and a pin hood or a long shield can be used on one side only of a mated pair of connectors. The mating connector must use a short shield.

The 34 and 50 position connectors can be used with either center or corner guide hardware. If center guides are used, an additional four 4-40 screws are required to secure the locking springs. If corner guides are used, an additional two 4-40 screws will be required to attach the shield. Corner guides require four guide pins and four guide sockets for each mated pair of connectors.

## Special application housings may be substituted for these standard housings. See Special Application Section.

This cable-to-cable application utilizes jackscrews, a twopiece short shield, a strain relief clamp, a pin hood for pin protection and guide hardware.

Do not use a pin hood in combination with the shield for sizes 20, 26 and 41. A long shield may be used in lieu of pin hood for pin protection for all sizes except the 20 position. Shields are available with 180° cable exit and for the 50 through 104 position connectors, a 90° cable exit.

Select the appropriate jackscrew length for the type of shield chosen as indicated by symbol ( $\Delta \blacktriangle$ ).

1. Confirm that Application E (at left) most closely meets your requirements. (Other applications are shown on pages 10-17 and 20 through 25.)

Тусо

Electronics

- 2. Find the appropriate column for the number of positions required.
- 3. Select part numbers required for the application listed in the column below the number of positions.

If a part number is not listed for a particular item, it is not available.

If more than one part number is listed for a particular hardware item, choose the one which best fits your application.

- 4. Dimensional information is available on the indicated pages under description column.
- 5. Select Contacts: Type II (page 30), Type III+ (pages 31 through 35) or Subminiature Coaxial (pages 40, 41).

Special application housings and posted housings may be substituted for these standard housings. See Special Application and Posted Connectors Sections.

This cable-to-panel application utilizes locking springs, strain relief clamps, a pin hood for pin protection and guide hardware.

The 34 and 50 position connectors can be used with either center or corner guide hardware. If center guide hardware is used, an additional four 4-40 screws, nuts and lockwashers are required to secure the locking springs. Corner guides require four guide pins and four guide sockets for each mated pair of connectors.

## Cable-to-Panel (Continued)

- 1. Confirm that Application G (at left) most closely meets your requirements. (Other applications are shown on pages 10-21 and 24, 25.)
- 2. Find the appropriate column for the number of positions required.
- 3. Select part numbers required for the application listed in the column below the number of positions.

If a part number is not listed for a particular item, it is not available.

If more than one part number is listed for a particular hardware item, choose the one which best fits your application.

- 4. Dimensional information is available on the indicated pages under description column.
- 5. Select Contacts: Type II (page 30), Type III+ (pages 31 through 35) or Subminiature Coaxial (pages 40, 41).

Special application housings and posted housings may be substituted for these standard housings. See Special Application and Posted Connectors Sections.

This cable-to-panel application utilizes locking springs, one-piece shields, a pin hood for pin protection and guide hardware. The shields are available with both 180° and 90° cable exits. The 180° shields are available in a long version which provides pin protection in lieu of a pin hood.

Do not select a long shield and a pin hood.

The 34 and 50 position connectors can be used with either center or corner guide hardware. If center guides are used, an additional four 4-40 screws are required to secure the locking springs. If corner guides are used, an additional two 4-40 screws will be required to attach the shield. Corner guides require four guide pins and four guide sockets for each mated pair.

## Cable-to-Panel (Continued)

- 1. Confirm that Application H (at left) most closely meets your requirements. (Other applications are shown on pages 10 through 23.)
- 2. Find the appropriate column for the number of positions required.
- 3. Select part numbers required for the application listed in the column below the number of positions.

If a part number is not listed for a particular item, it is not available.

If more than one part number is listed for a particular hardware item, choose the one which best fits your application.

- 4. Dimensional information is available on the indicated pages under description column.
- 5. Select Contacts: Type II (page 30), Type III+ (pages 31 through 35) or Subminiature Coaxial (pages 40, 41).

Special application housings and posted housings may be substituted for these standard housings. See Special Application and Posted Connectors Sections.

This cable-to-panel application utilizes jackscrews, a twopiece short shield, a strain relief clamp, a pin hood for pin protection and guide hardware.

**Do not** use a pin hood in combination with the shield for sizes 20, 26 and 41. A long shield may be used in lieu of pin hood for pin protection for all sizes except the 20 position. Shields are available with 180° cable exit and for the 50 thru 104 position connectors, a 90° cable exit. 104 CF has 90° and 45° cable exits. 160 CF has 45° cable exit.

Select the appropriate jackscrew length for the type of shield chosen as indicated by symbol ( $\Delta \Delta$ ).

# **Singal Contacts**

## Type III+, Crimp, Snap-In, Size 16

Precision formed pin and socket contacts in Size 16. They are used in M Series, Special M Series, "G" Series, Metrimate, Metrimate Drawer, and CPC Series 1 and 4 connectors. Contacts feature a high normal force which provides a low resistance in significant applications such as dry circuit signal conditions. Mating entry is closed-ended to prevent damage from stubbing due to misalignment. Stainless steel spring provides superior normal force and retention in the housing. AMP proprietary gold plating process is designed so that specified plating thicknesses are controlled on the inside of the socket, which is the critical contact mating area. The contacts are formed from brass. Single contact rating is 13 amperes at 30°C T-Rise. The single contact rating for enhanced high current Type III+ is 24 amperes @ 30°C T-Rise.

See page 31 for product details.

## Type III+, Solder Type, Size 16

As with the crimp snap-in Type III+, these precision formed solder-type contacts are also used in M Series, Special M Series, Metrimate, Metrimate Drawer, and CPC Series 1 and 4 connectors. Contacts feature a high normal force which provides a low resistance in significant applications, such as dry circuit conditions. A preformed wire barrel accepts both stranded and solid wire, while the preformed insulation barrel provides strain relief for various wire insulation thicknesses. Mating entry is closedended to prevent damage from stubbing due to misalignment. A stainless steel spring provides superior normal force and retention in the housing. AMP proprietary gold plating process is designed so that specified plating thicknesses are controlled on the inside of the socket, which is the critical contact area. Single contact current rating is 13 amperes at 30°C Temperature Rise. Single contact rating for enhanced high current Type III+ is 24 amperes at 30°C T-Rise.

See pages 34 and 35 for product details.

## Type III+, Solder Tab, Size 16

A companion contact style to the crimp snap-in and soldertype, the Type III+ Solder Tab is compatible with the same AMP connector families, and features high normal forces to provide a low resistance in significant applications. A pre-crimped solder tab with slot accepts various sizes of solid and stranded wire. Mating entry is closed-ended to prevent stubbing due to misalignment. A stainless steel spring provides superior normal force and retention in the housing. AMP proprietary gold plating process is designed so that specified plating thicknesses are controlled on the inside of the socket, which is the critical contact area. Single contact current rating is 13 amperes at 30°C Temperature Rise.

See page 35 for product details.

26

Dimensions are in millimeters and inches unless otherwise specified. Values in brackets are equivalent U.S. Customary Units. Dimensions are shown for reference purposes only. # Signal Contacts (Continued)

## Type III+, Posted Version, Size 16

The last member of the Type III+ family of contacts, the posted version is compatible with M Series, Special M Series, Metrimate, Metrimate Drawer, and CPC Series 1 connectors. Precision formed, they are pre-crimped to various post configurations including those that accept TERMI-POINT Clip or wire-wrap type terminations. Contacts feature high normal force which provides a low resistance in significant applications. Mating entry is closed-ended to prevent damage from stubbing due to misalignment. A stainless steel spring provides superior normal force and retention in the housing. AMP proprietary gold plating process is designed so that specified plating thicknesses are controlled on the inside of the socket, which is the critical contact mating area. Contacts are formed from brass. Single contact current rating is 13 amperes at 30°C Temperature Rise.

See page 32 for product details.

## Type II, Crimp, Snap-In, Size 16

Precision screw-machined pin and socket contacts, they are used in M Series, Special M Series, "G" Series, Metrimate, Metrimate Drawer, and CPC Series 1 and 4 connectors. Contacts feature high normal force which provides a low resistance in significant applications such as dry circuit signal conditions. Mating entry is closed-ended to prevent damage from stubbing due to misalignment. A stainless steel spring provides superior normal force and retention in the housing. The contact bodies are machined from solid brass. Single contact current rating is 13 amperes at 30°C Temperature Rise.

See page 30 for product details.

Contacts (Description of Types)

Catalog 82003 Revised 06-08

www.tvcoelectronics.com

Dimensions are in millimeters and inches unless otherwise specified. Values in brackets are equivalent U.S. Customary Units. Downloaded from Elcodis.com electronic components distributor

Dimensions are shown for reference purposes only. Specifications subject to change.

USA: 1-800-522-6752 Canada: 1-905-470-4425 Mexico: 01-800-733-8926 C. America: 52-55-5-729-0425

# **Power Contacts**

## Type I, Crimp, Snap-In, Size 12

Precision screw-machined pin and socket, Size 12 contacts, they are used in Special M Series and "G" Series connectors, and are inserted into the same cavities as Miniature Coaxial contacts. These contacts feature a high normal force which provides a low resistance in significant applications. Mating entry is closed-ended to prevent damage from stubbing due to misalignment. Beryllium copper springs are used to provide contact normal force and are assisted by a stainless steel hood which provides anti-overstress assurance. Single contact current rating is 23 amperes at 30°C Temperature Rise.

See page 36 for product details.

## Type XII, Crimp-Type

Precision formed male and female contacts used in CPC Series 3 and 4, Special M Series and "G" Series connectors, these contacts offer a low cost power option which provides additional applied cost savings when terminated with semiautomatic application equipment. The contact body is made from 100% copper, which provides for excellent conductivity. Spring characteristics are derived from a captive stainless steel spring which assists the dual cantilever spring members of the female contact. Single contact current rating is 35 amperes at 30°C Temperature Rise.

See page 38 for product details.

## **High Current Upgrades**

Precision screw-machined pin and socket contacts have increased current capability. All upgraded contacts use the high amperage Louvertac contact band. The design of this contact allows for increased current in the same form factor. For example, Type II/Type III+ upgraded contacts increase the current from 13 amperes free air

to 23 amperes free air at a 30°C Temperature Rise.

See pages 37 and 39 for product details.

Catalog 82003 Revised 06-08

# **Coaxial Contacts**

## Subminiature, Crimp, Snap-In, Size 16

Precision screw-machined pin and socket, Size 16 contacts, they are used in M Series, Special M Series, and CPC Series 1 and 4. They provide cost effective solutions in applications where mixtures of signal, power, and coaxial cable terminations are desired. The contact outer shell is made from brass, while the center pin conductor is beryllium copper, and the socket is brass. Both the pin and socket center conductor are gold plated for maximum corrosion resistance and minimum contact resistance. The retention spring is stainless steel, while the ferrule is tin plated copper. Contact design offers application of coaxial cable, shielded conductors, and twisted pair wire with a voltage rating of up to 200 VRMS, and a current rating of 1.0 ampere at 30°C Temperature Rise.

See pages 40 and 41 for product details.

## Miniature, Crimp, Snap-In, Size 12

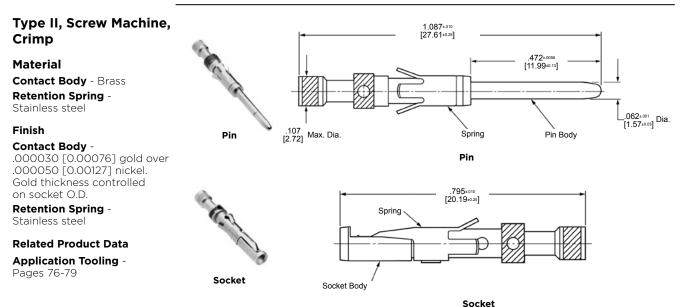

Precision screw-machined, Size 12 pin and socket contacts, they are used in Special M Series and "G" Series connectors. They provide cost effective solutions in applications where a mixture of signal, power, and coaxial cable terminations is desirable. Contact body and center wire conductor are made from brass, and are gold plated for maximum corrosion resistance and minimum contact resistance. The retention spring is beryllium copper, and the ferrule is tin plated copper. Contact design offers application of coaxial cable, shielded conductors, and twisted pair wire with a voltage rating of up to 325 VRMS, and a current rating of 7.5 amperes at 30°C Temperature Rise.

See pages 42 and 43 for product details.

<sup>1</sup>Overall insulation crimp diameter, including crimp barrel, must not exceed .125 [3.18].

<sup>2</sup>For AMP-TAPETRONIC Machine No. 69875, order contacts by Tape Mounted Contact No., plus packaging code "IM REEL" (5000 parts per reel). <sup>3</sup>Grounding pin is used to provide a make-first/break-last condition when mating and unmating connector halves.

<sup>4</sup>Use turret TH502 (1-601967-6) with hand tool 601967-1.

<sup>5</sup>Use turret TH501 (1-601967-5) with hand tool 601967-1.

<sup>6</sup>Pin length is .630<sup>±.005</sup> [16.002<sup>±.127</sup>] on these two pins.

<sup>7</sup>Die Set requires "C" Head Adapter Part No. 318161-1; Adapter Holder Part No. 356304-1 (with ratchet) or 189928-1 (without); and Power Unit Part No. 189721-2 (hand actuated) or 189722-2 (foot actuated).

\*Commercial PRO-CRIMPER II Hand Tool for field repair use only. Note: Die Set can be adapted for use with the 626 Pneumatic Tool System. † Does not use Hand Tool 91539-1 or 601967-1.

‡ Single contact, free-air test current is not to be construed as contact rating current. Use only for testing. Refer to contact current carrying capability information on page 8.

Insertion Tool Part No. 200893-2 (for insulation diameters .070 [1.78] or less).

Extraction Tool Part No. 305183

Extraction Tool Part No. 539972-1.

# **High Current Power** Contact—Size 16

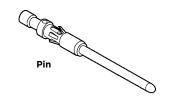

The features of the High Current Size 16 contact have been designed to retrofit into the existing AMP Connectors such as CPC (Circular Plastic Connector), CMC (Circular Metal Connector), G Series, M Series, Metrimate Square Grid and Drawer Connector housings. An initial T-Rise test in free air has shown a 23 amp capability with a 30° T-Rise. The contact may be crimped onto 14 AWG wire with an AMP hand tool Part No. 601967-1. Use turret TH502 (1-601967-6) for the pin and turret TH501 (1-601967-5) for the socket.

## **Power Contacts** (Continued)

## Type XII, Crimp, Snap-In

The Multimate features of the High Current Type XII contact have been designed to fit into the existing AMP Connectors such as CPC (Circular Plastic Connector), CMC (Circular Metal-Shell Connector), G Series, and M Series housings. An initial T-Rise test in free air has shown a 60 amp capability with a 30° T-Rise with 8 gage wires. The contact may be crimped onto 8 AWG wire with a Daniels Hand Tool M310 or AMP P/N 356114-1 and Positioner TP1068S or AMP P/N 356119-1.

#### Material

Body - Copper alloy

Louvertac Band -Beryllium copper

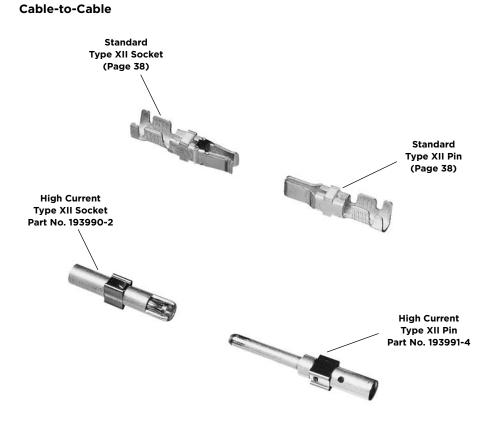

**Retention Spring** -Stainless steel Finish Body - Silver

Louvertac Band - Gold

**Extraction Tool** Part No. 224155-1

Current-Carrying Capacity. The graph shows current-carrying capacity versus temperature rise for a fully energized 3 position CPC plug P/N 206037-2 and receptacle P/N 206036-2. These initial representative amperage ratings were conducted with 8 AWG wires that were 3 feet long.

- Notes: 1. High Current contacts with Louvertac bands are not intermateable with any other contact.
  - 2. Additional information on CPC and CMC connectors is available in Tyco Electronics Catalog No. 82021.
    - 3. Additional information on G Series connectors is available in Tyco Electronics Catalog No. 82046.
    - Additional information on M Series connectors is available in Tyco Electronics Catalog No. 82003. 4.
    - 5. Additional information on LGH connectors is available in Tyco Electronics Catalog No. 82024.

## **Standard Housings**

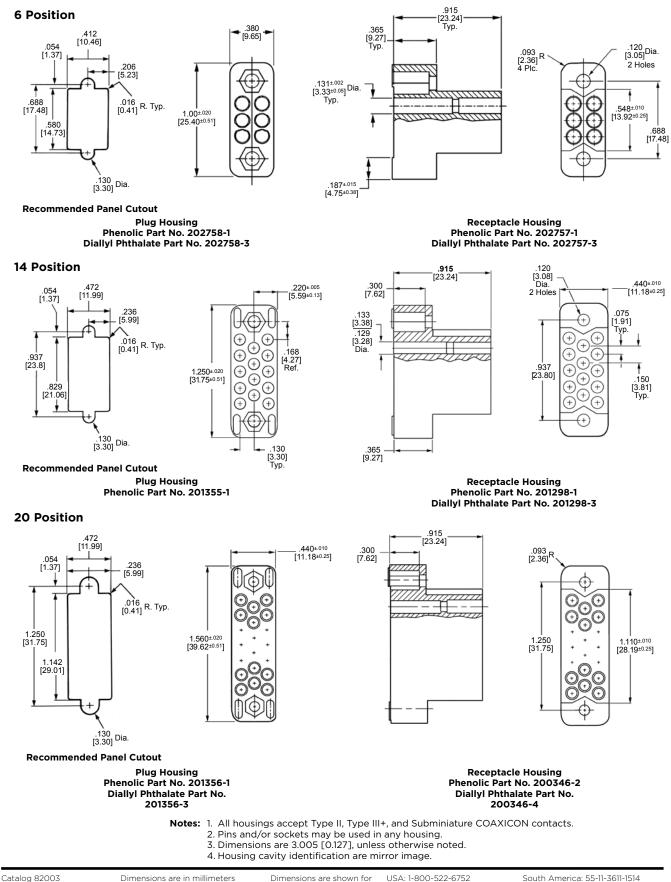

Standard connectors are furnished as unloaded housings that have Multimate contact cavities for accepting Type II, Type III+, and subminiature COAXICON crimp-type contacts, as well as Type III+ solder-type and posted contacts. All Multimate contacts are interchangeable in the same housing cavity. Standard connector housings are available in sizes ranging from 6 thru 160 positions. They mate with each other, as well as posted connectors of a corresponding size for hand tool and semiautomatic machine wiring. See Posted Connector section.

## ₹ Тусо Electronics

## **Posted Connectors**

Posted connectors are furnished preloaded with Size 16, posted contacts (as shown on page 32) and are specifically designed to be wired with hand tools and semiautomatic machines. The cavity centerline spacing is too close to accommodate the heads and mandrels of fully automatic machines. Post configurations of the preloaded contacts are available for accepting TERMI-POINT Clip and wrap-type terminations.

Posted connector housings are made of black phenolic or diallyl phthalate and are available in sizes ranging from 6 thru 104 positions. They will mate with correspondingly sized standard connector (except .200 [5.08] grid) housings loaded with Size 16 crimptype contacts. It is not recommended to mate two posted connectors. Since the preloaded posted contacts are rigid in the housing, mating two posted connectors, particularly of the larger sizes, would be difficult.

Posted connectors can be substituted for standard connectors in the Connector/ Hardware Selection Charts, pages 10 to 25.

Tyco Electronics does not recommend the use of shields or strain relief clamps with posted connectors because of the potential of shorting.

## **Special Application Connectors**

Special Application Connectors are available in the following configurations: V.35

Shallow Block High Current Mixed High Voltage RFI/EMI Shielded Grounding Blocks

#### V.35 Connector

The 34 position V.35 Connector is fully assembled and ready for placement on a printed circuit board. They are also available in kit form for cable assembly. These AMP V.35 connectors meet the requirements of 408-2593 for CCITT V.35 interfacing.

#### High current connectors are

designed for applications requiring up to 25 amperes of current. They are available in 12-position male and female housings which have rectangular contact cavities for accepting Type XII contacts.

#### Mixed connectors are

designed for applications that require intermixing signal, power and/or coaxial circuits in the same connector

housing. Housings are available in 15-, 16-, 29 CF (center fastener) and 42-position sizes and, depending upon the specific configuration, will accept Multimate contacts, Type I and Miniature, Standard and Twin Standard COAXICON contacts. The rectangular contact cavities accept Type XII contacts.

#### High voltage connectors are designed for high voltage applications using Multimate contacts. The cavity centerline

spacings and the silo construction of the contact cavities increase the current creepage path for higher voltage ratings. Housing sizes include 20 and 28 positions.

#### **RFI/EMI** shielding kits

provide shielding capabilities against radio frequency and electromagnetic interferences. Special 104-position housings accept Multimate contacts and are especially designed for use with shielding hardware. These shielding kits cannot be used with the standard 104-position connector housings.

#### Grounding blocks are

ideally suited for aircraft applications, where shielded cable is to be grounded to an airframe. The ground wires of shielded cables are pigtailed off with ferrules and are crimped to Size 16 socket contacts. The contacts are loaded into a standard 14- or 34-position connector housing. This connector then can be mated to the grounding block which is fastened to the aircraft frame. Grounding blocks have Size 16 screw-machined pin contacts which are staked, riveted and soldered into the L-shaped metal bracket. The bracket has fixed jackscrew receptacles that will accept the special turnable jackscrews fastened to the mating socket connector half.

## M Series V.35 Special Application Connectors

## **Product Facts**

**Т**усо

Meets requirements of 408-2593 for CCITT V.35 interface

Electronics

- Pcb connectors fully assembled, right-angle and vertical mount
- Mounting bracket secures pcb connector to board
- Pcb connectors preloaded with Size 16 contacts
- Right-angle connector features true position location wafer
- Intermateable with comparable M Series connectors
- Cable connector kits available with 1-piece stamped and formed shield or new, more durable die cast 2-piece shield
- Cable connectors accept Size 16, Type III+ strip form or loose piece contacts
- Housings made of UL 94V-0 rated flame retardant material
- Recognized under the **Component Program of** the Underwriters Laboratories Inc. for 250 volts, File No. E28476
- Certified by Canadian Standards Association, File No. LR7189

The 34-position V.35 includes both printed circuit board mount and cable mount configurations.

The pcb connectors are fully assembled and ready for placement on printed circuit boards. Available in vertical or right-angle mount versions, they offer dependable, convenient assembly in high-speed data transmission applications. Connectors are preloaded with economical. dependable Size 16 precision stamped and formed contacts. Contact posts feature a chamfered lead-in that eases assembly to the pc boards. A mounting bracket for securing the connector to the pc board is standard equipment. Right-angle pcb connectors feature true position, location wafers that provide for the exact location of each post. Both the right-angle and vertical mount pcb connectors are fully mateable with comparable M

Series connectors.

Cable connector assemblies are offered in kit form. Each kit contains: a 34-position housing; onepiece or two-piece shield; two, one-piece turnable jackscrews; strain relief clamp; and necessary mounting screws. Shields are offered in an economical one-piece stamped and formed version or a more durable two-piece die cast version. A choice of die cast zinc, nickel plated or stainless steel turnable jackscrews are available. Cable connectors accept

Size 16, Type III+ pin and socket contacts. (Contacts sold separately, see page 31.)

AMP M Series V.35 Special Application Connectors meet the requirements of ISO 2593 for CCITT V.35 interface.

## Dimensions are in millimeters and inches unless otherwise

## M Series V.35 Special Application Connectors (Continued)

## Material Specifications Contacts

The material composition and construction of AMP Type III+ contacts encompasses varying price ranges and performance characteristics. Specific materials and available plating thicknesses of each contact are provided.

#### Housings

M Series V.35 connector housings are made of general purpose phenolic (black) or polyester (black). Phenolic housings are molded of material per MIL-M-14, Type CFG. The performance characteristics of this material makes the connector an excellent choice in applications where exceptional resistance to acids. alkalies, or solvents is not a prime factor.

#### Hardware

A variety of materials such as plated steel, stainless steel, zinc (nickel plated) and aluminum are used in the manufacture of M Series V.35 connector hardware. This provides for the proper operation and durability of each hardware component, while offering a choice of economies to satisfy particular application requirements.

#### **Current Carrying Capabilities**

The total current capacity of each contact in any given M Series connector is dependent upon the heat rise resulting from the combination of electrical loads of all contacts in the connector arrangement and the maximum ambient temperature in which the connector will be operating. Caution must be taken to insure that this combination of conditions does not cause the internal temperature of the connector to exceed the maximum operating temperature of the housing material. Several variables which must be considered when determining this maximum current capability for your application are:

- a) Wire Size Larger wire will carry more current since it has less internal resistance to current flow and generates less heat. The wire also conducts heat away from the connector.
- b) Connector Size In general, with more circuits in a connector, less current per contact can be carried.
- c) Current Load Distribution -Spreading those lines with greater current loads throughout the connector, particularly around the outer perimeter, will enhance heat dissipation.
- d) Ambient Temperature -With higher ambient temperature, less current can be carried.

## **Performance Data**

**Temperature Rating -**Phenolic Housings, -55°C to +150°C

#### **Polyester Housings** --55°C to +130°C

Flammability Rating -Phenolic Material, UL 94V-0

**Dielectric Withstanding** Voltage (at sea level)

Type III+ Contacts, 900 VAC, RMS

#### Durability (Mating/Unmating)

 Contacts, Gold plated 500 cycles; Contacts, Bright tin-lead plated - 50 cycles

Note: For detailed information on the above performance data and further information on other performance data such as Insulation Resistance, Thermal Shock, Moisture Resistance, Vibration and Physical Shock, request AMP Product Specification No. 108-10001.

Turnable Jackscrew Body -Die cast zinc, chromate conversion coating

**Turnable Jackscrew Tip -**Stainless steel Roll Pin - Stainless steel

#### **For Fixed Jackscrews** Lockwasher - Steel

Hex Nut - Steel, zinc plated

Jackscrews are used as an aid in mating and unmating connectors and for holding mated connectors together, mostly larger sizes (34-position and up). They can also be used for polarization.

Turnable jackscrews are free to rotate in a connector housing and are always used opposite mating fixed jackscrews. Where provided, roll pins are used to hold a male or female tip onto the turnable jackscrew body. AMP Assembly Tool No. 91016-2 (shown below) is available for properly assembling the turnable jackscrews on a connector housing.

Fixed jackscrews can be readily assembled to a connector housing with the Nut Driver Tool (also shown below).

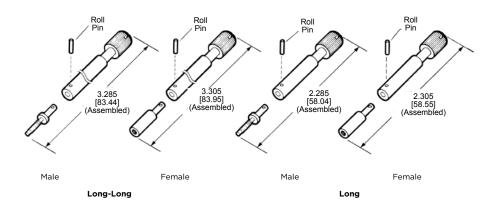

AMP Assembly Tool Part No. 91016-2 (for Roll Pins)

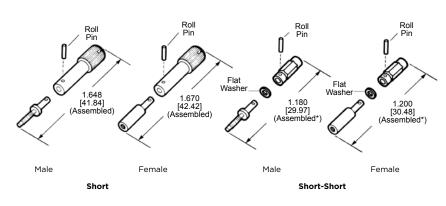

Nut Driver Part No. 811262-1 (4-40)

Male (Spring Member) -Spring steel, nickel plated Female (Latching Member) -Stainless steel

Locking Springs are used to hold mated connectors together. Although Locking Springs can be used on connectors up to 50 positions, they are primarily used on smaller size connectors (less than 34 positions).

In all applications, a Male (Spring Member) is used opposite a Female (Latching Member). They can be secured to a connector housing using Guide Pins and Sockets or 4-40 x .250 [6.35] fillister head screws and nuts. Locking Springs can be used with all hardware, except Closed-End Pin Hoods.

#### **Material and Finish**

Guide Pins and Sockets-Stainless steel Lockwashers—Stainless steel Hex Nuts-Steel, zinc plated

Guiding hardware is used to align connector halves during mating. This hardware can also be used for keying connectors to provide for proper mating. Guiding hardware can be readily secured to connector housings using the Nut Driver Tool shown below.

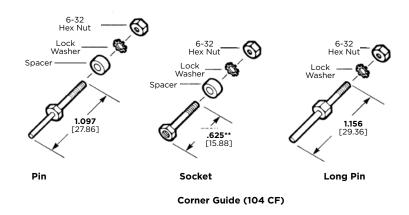

Center Guide Pins and Sockets are used primarily in housings having a single mounting hole, but can also be used in the centermost hole of housings having 3 or 4 mounting holes.

Corner Guide Pins and Sockets are used in the corner holes of housings having 2, 3 or 4 mounting holes. They cannot be used in center mounting holes which are slightly deeper than corner mounting holes to accept Jackscrews.

Pin Hoods are used to protect pin contacts that protrude from a connector housing.

When contacts are mixed (pins and sockets in both housings), an Internal Pin Hood is used on one housing and an External Pin Hood (page 83) is used on the other housing. Or a Long Shield is used on one housing and an External Pin Hood must be used on the other housing. When a housing is loaded with all pin contacts, an Internal or External Pin Hood may be used—no Pin Hood is required on the mating half.

External Open-End Pin Hoods with flanges (page 83) are used primarily for mounting a connector with pin contacts to a panel.

All Pin Hoods may be secured to connector housings using other appropriate hardware, such as Jackscrews and Guide Pins and Sockets.

Note: Typical Internal Open-End and Closed-End Pin Hoods are illustrated. Slight differences in configuration exist for various sizes. The mounting holes and/or slots in each Pin Hood match the mounting hole pattern of the connector housing on which the Pin Hood is used.

Shields - See charts Cable Clamp - Steel, nickel plated Screws - Steel, zinc plated

These Two-Piece Shields are used to protect connectors from dust, dirt and physical damage and to provide strain relief for the contacts. They feature integral cable clamps formed at 180° and 90° and are available in long and short versions. Long versions offer pin protection as well as connector protection and strain relief. Short versions may be used in combination with Pin Hoods to provide pin protection.

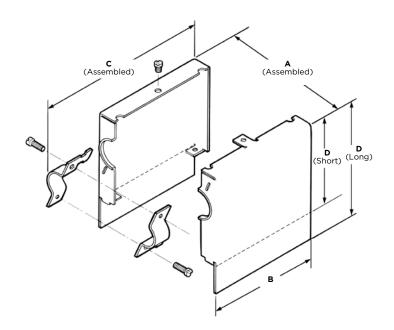

For shielding and fastening applications, Two-Piece Shields are used with Jackscrews. They may be secured to a connector housing using other appropriate hardware such as Guide Pins and Sockets.

Two-Piece Shields with cable clamps formed at 45° are available, see page 87.

Tyco Electronics does NOT recommend the use of shields with posted connectors because of the potential of shorting.

Shields and Cable Clamps -Steel, nickel plated Screws - Steel, zinc plated

These Two-Piece Shields are used to protect connectors from dust, dirt and physical damage and to provide strain relief for the contacts. They feature integral cable clamps formed at 45° and are specifically designed for use with 104 CF and 160 CF position standard connectors; 30° exit shield is available for 29 CF position connectors.

These Shields may be used with Pin Hoods to provide pin protection.

These Two-Piece Shields may be secured to a connector housing using other appropriate hardware such as Guide Pins and Sockets.

Tyco Electronics does NOT recommend the use of shields with posted connectors because of the potential of shorting.

45° Cable Exit

Note: A typical 45° Cable Exit Shield is illustrated. Slight differences in configuration exist between sizes.

#### **Strain Relief Hardware**

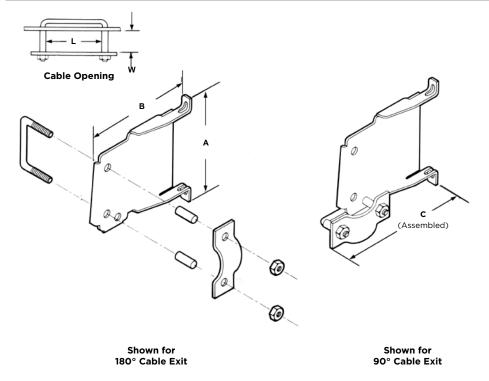

#### **Strain Relief Clamps**

#### **Material and Finish**

Clamp-Steel, nickel plated Hex Nuts-Steel, zinc plated "U" Bolt-Stainless steel Sleeves-Black plastic Bracket-See chart

Strain Relief Clamps are used to relieve the stress of the wires on the contacts and to group the wires where they enter a connector. Both long and short versions are available. The long versions are normally used for all applications and provide a greater distance between the wire bundle and the connector for operating Jackscrews without interference. The short versions are ideally suited for applications where space is limited.

Tyco Electronics does NOT recommend the use of Strain Relief Clamps with posted connectors because of the potential of shorting.

Note: A typical Strain Relief Clamp is illustrated. Slight differences in configuration exist for various sizes.

### **Keying Hardware**

#### **Keying Plug (for Multimate Contact Cavities**)

#### Material

Natural color nylon

This cylindrical keying plug is used in Multimate contact cavities that accept Type II, Type III+ and Subminiature COAXICON socket contacts. The plug protrudes from the mating face of a connector and will prevent connector halves from being mated by butting against the pin contact. The mating pin contact must be removed to provide for proper mating.

**Keying Plugs (for Type** XII Contact Cavities)

For 207597-1–Gray nylon For 206508-1-Natural color

Two versions of rectangular keying plugs are available for Type XII contact cavities. A pin style is used in cavities

that accept Type XII male contacts, and a plug style is

used in cavities that accept

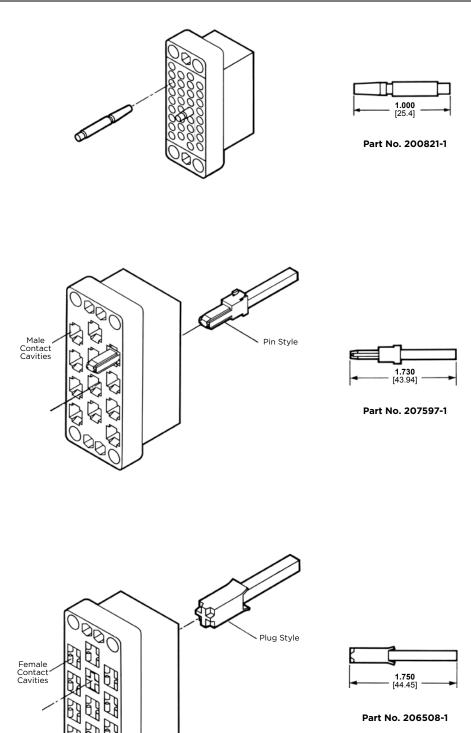

keying plug described above.

The mating contact must also be removed to provide for proper connector mating.

Type XII female contacts. These keying plugs perform the same as the cylindrical

Material

#### **Mechanical Hand Tools** for Interchangeable Die Sets

These tools are ideal for small production, prototype and experimental applications. They are used for terminating pin and socket contacts to wire and feature a ratchet device to provide consistently formed crimps.

## Application Tooling

#### SDE (Standard Die **Envelope)** Die Sets

**PRO-CRIMPER III Hand** 

Tool, Part No. 58495-1

**CERTI-CRIMP Straight** 

**CERTI-CRIMP "C" Head** 

**Straight Action Hand Tool** 

(SAHT), Part No. 69710-1

Action Hand Tools (SAHT)

SDE die sets provide costeffective flexibility, through many options for a common die-set outline. The SDE die sets can be adapted for use with CERTI-CRIMP hand tools. PRO-CRIMPER III hand tools, the SDE Terminator and the 626 Pneumatic Tool System.

Commercial grade hand tool for crimping various products. Features ratchet control to provide complete crimp cycle. Accepts both pinned- and shoulderedstyle die sets. Locators are provided with pinned-style die sets for proper contact and wire positioning, and to help minimize contact rotation and bending during crimping. Approximate weight 1.3 lb [0.60 kg].

Premium grade hand tools. Feature ratchet control to provide complete crimp cycle. Die sets close in a straight line. Include a contact locator and wire stop, plus an insulation crimp adjustment lever, when applicable. Approximate weight 1.3 lb [0.59 kg].

Premium grade hand tool. Features ratchet control to provide complete crimp cycle. The interchangeable die sets close in a straight line to minimize contact or terminal rotation during crimping. When applicable, user-assist features such as a contact or terminal locator and a wire stop, are built into the die set. Approximate weight 1.9 lb [0.86 kg].

with compact design features compatible with all AMP SDE sets. Hand- or foot-actuated

For more information, request Catalog 1654003.

For use with Type III+ contacts, see pages 17-19. For more information, request Catalog 1773379-1, Instruction Sheet 408-9930.

For Type III+ contacts, see pages 17-19 For more information, request Catalog 65780.

For subminiature coaxial contacts, see pages 22-23. For more information, request Catalog 65780, Instruction Sheet 408-2095.

For more information, request Catalog 1654714.

**Application Tooling** 

**Electric Machine for Interchangeable Die Sets** 

An electric crimp terminator a die set holder that is (PRO-CRIMPER III Tool) die options are available. CE Approved.

**Pneumatic Hand Tool for Interchangeable Die Sets** 

#### 6-26 Pneumatic Tool System

**Battery-Powered Crimp Tool Kits** 

Effortless crimping for a broad range of terminals, either bench-mounted or hand-held for working in cramped quarters.

- · Lightweight tool eliminates physical force required by hand tools
- Hand- or foot-switch operation
- Termination wire range from 26-6 AWG [0.12-13.0mm2], plus coaxial

The Battery-Powered Crimp Tool Kit is a fast, ergonomically-designed tool is ideal for use at the bench, on the line, or in the field. It's completely portable, lightweight (3.48 lbs including battery) and compact. The charge delivers over 100 crimps - charge time is 40 mins. The kit includes the tool, 2 batteries and the charger.

and fiber optic cable

- · Works with existing AMPcompatible crimp heads and die sets
- · Ratchet control option provides complete crimp cycle, eliminating partial crimps
- Use rotating head assembly to reach difficult termination locations

For more information, request Catalog 124208.

- P/N 1213890-1 SDE Battery Powered Crimp Tool Kit (dies not included)
- P/N 1213805-1 CERTI-CRIMP II, SA Battery Powered Crimp Tool Kit (heads not included)
- P/N 1213840-1 CERTI-CRIMP, Large Die, C-Head Adapter Battery Powered Crimp Tool Kit (dies not included)
- P/N 1213819-1 CERTI-CRIMP, Large Die, Straight-Action Adapter Battery Powered Crimp Tool Kit (dies not included)

For more information, request Catalog **1773381**.

#### AMP-O-LECTRIC Model "K" Terminating Machine with a permanently-mounted applicator that accepts interchangeable die sets to apply a variety of tape-mounted terminals and splices. Many of the die sets can also be used in AMP-O-LECTRIC Terminating Machines with a tape applicator.

For more information, contact Tyco Electronics.

#### **CRIMP MACHINES**

AMP-O-LECTRIC Model "G" Terminating Machines, Part Nos. 354500-1, -9, -11

Semiautomatic bench machines for crimping reeled terminals and contacts, featuring a quiet and reliable direct motor drive. microprocessor controls for ease of setup and operation, and guarding and lighting designed for operator convenience and safety. All models are equipped with either manual or automatic precision adjustment of crimp height. Machine-mounted sensors are available for crimp quality monitoring using conventional miniaturestyle applicators.

#### For more information, request Catalog 1654956-2, Video 198116, Catalog 82275 [Crimp Quality Monitor (CQM)], Video 198094

Note: New Stripping Module available, see page 79.

#### **AMP-TAPETRONIC** Machine, Part No. 69875

Catalog 82003 Revised 06-08

**Crimp Quality Monitor** (CQM) Part No. 1320420-2

#### AMP 3K/40 and AMP 5K/40 Terminating Machines

The unique system provides 100% on-the-fly crimp inspection. It measures the crimp height of each termination, and evaluates the quality of each crimp. If a crimp is questionable, the monitor alerts the operator with both visual and audible alarms. It also provides ports for printing and networking. When used with AMP-O-LECTRIC Model "G" Termination Machines, the monitor is mounted to the machine. When used with AMPOMATOR CLS IV Lead Making Machines, it is integrated into the machine's operating system.

For more information, request Catalog 82275.

The AMP 3K/40 and AMP 5K/40 Terminators are designed for customers that require the increased output and quality of a semiautomatic machine at a competitive price. By incorporating the most commonly requested features as standard and offering a long list of optional equipment, these terminators offer flexibility to meet the specific needs of various applications at the lowest possible cost.

#### Features

- 3,000 lb [1361 kg] max. crimp force (AMP 3K/40);
- 5,000 lb [2268 kg] max. crimp force (AMP 5K/40)
- Toolless removal of applicators and guards
- Jog capability
- Quiet, fast operation -80/76 dBA and cycle time less than 0.400 seconds
- Accepts Heavy Duty Mini stye applicators
- Wide range of optional equipment such as toolless precision crimp height adjust, batch counter, CQM capability and work light
- For more information, request Catalog 1654956-2.

Note: New Stripping Module available, see page 79.

#### **Crimp Force Monitor** (CFM)

Your Quality Program calls for more than a Good Crimping System. It demands proof – the proof you get with the SLE crimp force monitor. It has highresolution piezo-quartz sensor technology for a more precise identification of typical crimping faults.

Sure, you can sample and test crimp height with a micrometer. In fact, that's how you standardize your process. But for ongoing quality control, testing every crimp, SLE is the choice.

It's known worldwide, and meets our standards or a high performance terminating system. That's how you can be sure.

High quality crimping - with verification - means higher production and productivity.

#### System III Applicator

#### Features

- 1 or 2 Channels
- 128 x 128 Dot Matrix
- Zone & Peak Force Analysis
- Force Trigger
- Encoder Proximity Trigger
- Absolute Force Measurement
- Monitors the wire barrel crimp of open-barrel, uninsulated contacts and terminals
- Real-time monitoring of every crimp
- Special applicators are not required
- Use with the AMP-3K/40 and AMP-5K/40 presses from Tyco Electronics
- Frame-mounted force sensor
- For bench or fullyautomatic machines
- Please contact us for any other type of press you would like to use with the CFM

#### Crimp Force Monitor Specifications

- Electrical: 110-230 VAC Single Phase, 50-60 Hz, 15 watts
- Size (Monitor): 178mm x 137mm x 95mm
- Weight (Monitor): 1.02kg (single channel), 1.05kg (double channel)

For more information, request Catalog 1309085-2

The System III Applicator introduces several new technologies into the applicator including a precision servoelectric motorized feeding system, a built-in data module for storing terminal crimp and set-up information, a precision fit round ram, and a newly designed terminal depressor. It still utilizes the proven quality of the HD-M crimper and anvil tooling.

For more information, request Catalog 1654956-8

LEAD MAKERS

Komax gamma 333 PC Lead-Making Machine

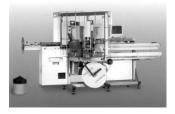

This fully-automatic, PCcontrolled leadmaker can be equipped with up to three processing stations enabling the crimping of both ends of the wire, double-crimp connections with three different contacts, singleended seal applications, tinning or ink-jet marking. Features include ultra-short conversions times, easy-touse graphic-based TopWin interface with multiplelanguage capability, crimp force analyzer with statistical analysis, seal monitoring, and integrated good/bad sorting.

For more information, request Catalog 1307901.

#### **AMPOMATOR System III** Leadmaker

Komax 433-S alpha Lead-Making Machine

The AMPOMATOR System III Leadmaker is designed for the demands of low-volume/ high mix manufacturing and precision quality. This leadmaker combines the best wire processing capabilities with new technologies in terminal feeding and machine set-up found in the System III Applicator to offer significant advantages for higher throughput and efficiencies.

For more information, request Catalog 1654956-5

The 433-S alpha offers maximum flexibility for applying seals to one or both ends of the wire with the corresponding terminal. When equipped with the mci 711 crimp terminator and mci 761 seal applicator, the fullyautomated 433-S alpha forms a highly compact system with optimum accessibility. Dynamic servo-drives provide fine travel settings on all motor axes and the wire straightening unit with guickrelease lock and automatic lead-in feature reduces wire changeover time. The TopWin software provides for fast, simple data input.

For more information, request Catalog 1307801.

#### APPLICATORS

**End-Feed Heavy-Duty Miniature Applicators** (coded HDM)

#### **EDGE Applicator Counter**

Side-Feed Heavy-Duty

**Miniature Applicators** 

(coded HDM)

Interchangeable applicators for crimping products reeled end-to-end (primarily openbarrel terminals). Used in bench and lead-making machines; most designs can be used, or adapted for use with minor tooling changes, dial-in settings for different wire sizes and insulation diameters. Mechanical or air-powered feed systems, depending on the product applied.

For more information, request Catalog 296393-2 and Instruction Sheet 408-8039.

The new EDGE counter tracks wearable tool usage for the most effective maintenance planning. The completely electronic counter, with clear LCD display, indicates cycles since installation. By performing maintenance at measured intervals with pre-set limits, operators avoid breakdowns and rejects caused by tool wear or mis-adjustment. A wireless interface transfers counters to a PC running the optional Edge Counter Software Pack.

The EDGE is standard on all new applicators and can be retrofitted to most existing Tyco Electronics applicators.

For more information, request Catalog 1773385..

Interchangeable applicators for crimping products reeled side-by-side on single or dual carrier strips (primarily closed-barrel terminals and open-barrel contacts). Similar design as the endfeed version. All side-feed applicators include a wire stop to help correctly position the wire end in the crimping target area.

For more information, request Catalog 296393-2 and Instruction Sheet 408-8040.

South America: 55-11-3611-1514

Stripper-Crimper Applicators (coded SCA)

Interchangeable applicators for crimping products in AMP-O-MATIC Stripper-Crimper Machines. Consist of separate ram and lower tooling assemblies. Similar dial-in settings for different wire sizes and insulation diameters as HDM applicators. Available with sensors for use with the Crimp Quality Monitor.

For more information, request Catalog 65004 (AMP-O-MATIC Stripper-Crimper Machines), Catalog 82275 [Crimp Quality Monitor (CQM)]

#### STRIPPER-CRIMPER MACHINES

**AMP-O-MATIC Stripper-Crimper Machines, Part** Nos. 1320895-1, -2

Stripping Module (for the AMP 3K/40 and AMP 5K/40 Terminating Machines and AMP-O-**LECTRIC Model "G"** Terminator on page 77)

Semiautomatic bench crimping machines that also strip the wire, and are therefore used for terminating jacketed cable. Feature manual precision adjustment of crimp height. keyed strip blades for faster, more accurate setups, and an efficient scrap removal system. All adjustments can be made from the front of the machines without special tools. Available with crimp quality monitoring.

For more information, request Catalog 65004, Video 198075, Catalog 82275 [Crimp Quality Monitor (CQM)], Video 198094.

The combination of the Stripping Module with the AMP 3K/40 and AMP 5K/40 Terminating Machines or the AMP-O-LECTRIC Model "G" Terminator provides an economic and proficient method of stripping the wire and crimping terminals on the same machine. The module accepts End- and Side-Feed HDM Applicators (32-14 AWG) and operates in three modes: crimp only, strip only, or strip and crimp. It can be installed on existing machines in the field or purchased as one unit from the factory.

For more information, request Catalog 1309085.

#### **Cosmic 30M Wire Strip**ping Machine, 5-528367-0

**Cosmic 927R Micro-Cable** Stripper

The Cosmic 30M is a high precision, high speed electrical wire stripper that is very easy to operate. It's equipped with a four blade system and an optional gripper for more difficult wires. There is a digital display for the wire diameter that can be set at 0.01 mm increments.

For more information, request Catalog 1773385-2.

The compact, lightweight, benchtop Cosmic 927R was designed and developed to reliably strip various insulation materials and micro-cable. From conductor diameter 36 to 10 AWG, the stripping diameter display can be set to within 0.1 mm increments.

For more information, request Catalog 1773385-4.

### **Technical Documents**

The following is a list of technical documents that provide specifications, application and performance data for M Series connectors, contacts, tooling and hardware.

Product Specifications describe technical performance characteristics and verification tests. They are intended for the Design, Component and Quality Engineer.

108-10001 M Series Connectors 108-10024 CPC Connectors 108-10037 Contacts, Type XII 108-10039 Type II Contacts 108-10040 Metal-Shell CPC Connectors 108-10042 Type III+ Contacts 108-10108 Type I Contacts Subminiature COAXICON Contacts 108-12011 108-12021 Miniature COAXICON Contacts

**Application Specifications** describe requirements for using the product in its intended application and/or crimping information. They are intended for the Packaging and Design Engineer and the Machine Setup Person.

- 114-10000 Contacts, Size 20 DF
- 114-10004 Type III+ Contacts, Application of
- Type XII Contacts, Application of 114-10005
- 114-10026 Type II Contacts
- 114-10038 **CPC** Connectors

**Instruction Sheets** provide instructions for assembling or applying the product. They are intended for the Manufacturing Assembler or Operator.

- 408-1379 Selection Charts for Multimate Pin and Socket Contacts
- 408-7053 Selection Chart for Type I Pin and Socket Contacts
- 408-1770 Selection Chart for Miniature COAXICON Contacts
- 408-7170 6, 14, 20 and 41 Position M Series Connectors
- 408-7177 21 and 26 Position M Series Connectors
- 408-7161 34 and 50 Position and 20 Position (High Voltage) M Series Connectors
- 408-7164 75 and 104 Position M Series Connectors
- 408-7005 104 CF Position M Series Connectors
- 408-7293 160 CF Position M Series Connectors
- 408-7105 14, 20, 26 and 41 Position M Series Connector Kits
- 408-7107 34 and 50 Position M Series Connector Kits
- 408-7730 34, 50, 75 and 104 Position M Series Connector Kits
- 408-7108 75 and 104 Position M Series Connector Kits
- 408-7048 15 Position (Mixed) M Series Connectors
- 408-7455 29 Position (Mixed) M Series Connectors
- 408-6800 Shield Kit 208783-1 for 104 Position M Series Connector
- 408-7485 Press-Fit Jackscrews for M Series Connectors
- 408-7066 Locking Springs for 14, 20, 21, 26 and 41 Position M Series Connectors
- 408-7067 Locking Springs for 34 and 50 Position M Series Connectors
- 408-7055 Corner Guide Pins and Sockets for 34 and 50 Position M Series Connectors
- Corner Guide Pins and Sockets for 75 and 104 Position M Series 408-7056 Connectors
- Guide Pins and Sockets for 104 CF Position M Series Connectors 408-7121
- 408-7013 Pin Hoods for M Series Connectors

Electronics

Dimensions are in millimeters and inches unless otherwise specified. Values in brackets are www.tycoelectronics.com equivalent U.S. Customary Units.

Dimensions are shown for USA: 1-800-522-6752 reference purposes only. Specifications subject to change.

Canada: 1-905-470-4425 Mexico: 01-800-733-8926 C. America: 52-55-5-729-0425 UK: 44-141-810-8967

#### Technical Documents (Continued)

	<b>Sheets</b> provide instructions for assembling or applying the product.
-	tended for the Manufacturing Assembler or Operator. (Continued)
408-7094	Pin Hoods w/Mounting Flange for 34 and 50 Position M Series Connectors
408-7103	Pin Hoods w/Mounting Flange for 41 Position M Series Connectors
408-7095	Pin Hoods w/Mounting Flange for 75 Position M Series Connectors
408-9731	M Series V.35 Cable Connector Kits
408-7089	Pin Hoods, Closed-End, for 104 CF Position M Series Connectors
408-1238	Shields (Long) for 34 and 50 Position M Series Connectors
408-1197	Shields (Short) for 34 and 50 Position M Series Connectors
408-1298	Shields, 180° (Long) for 14, 20, 26, 34 and 50 Position M Series Connectors
408-1312	Shields, 180° (Short) for 14, 20, 26, 34 and 50 Position M Series Connectors
408-1296	Shields, 90° (Long) for 14, 20, 26, 34 and 50 Position M Series Connectors
408-1297	Shields, 90° (Short) for 14, 20, 26, 34 and 50 Position M Series Connectors
408-7026	Shields, 90° (Short) for 21 and 41 Position M Series Connectors
408-1192	Shields, 180° (Long and Short) for 26 and 41 Position M Series Connectors
408-7220	Shields, 180° and 90° (Long and Short) for 75 Position M Series Connectors
408-1321	Shields, 90° (Short) for 104 Position M Series Connectors
408-7148	Shields, 90° and 45° (Long) for 104 CF Position M Series Connectors
408-7088	Shields, 45° (Short) for 104 CF Position M Series Connectors
408-7423	Shields, 45° (Short) for 160 CF Position M Series Connectors
408-7017	Strain Relief Clamps (Long) for 14 and 20 Position M Series Connectors
408-7018	Strain Relief Clamps (Long) for 26 Position M Series Connectors
408-1313	Strain Relief Clamps (Short) for 14, 20 and 26 Position M Series Connectors
408-7012	Strain Relief Clamps (Long and Short) for 21 and 41 Position M Series Connectors
408-7019	Strain Relief Clamps (Long) for 34 Position M Series Connectors
408-1317	Strain Relief Clamps (Short) for 34 and 50 Position M Series Connectors
408-7216	Strain Relief Clamps (Long) for 75 Position M Series Connectors
408-1368	Strain Relief Clamps (Short) for 75 Position M Series Connectors
408-7020	Strain Relief Clamps (Long) for 50 and 104 Position M Series Connectors
408-1322	Strain Relief Clamps (Short) for 104 Position M Series Connectors
408-1340	Keying Plug (Cylindrical) for Multimate Contact Cavities
408-6613	Application and Maintenance of AMP Hand Crimping Tool 90067
408-7414	Application and Maintenance of AMP Hand Crimping Tool 90225-2
408-7942	Application and Maintenance of AMP Hand Crimping Tool 90310-2
408-7773	Application and Maintenance of AMP Hand Crimping Tool 90331-1
408-7126	AMP Assembly Tool 91016 for Turnable Jackscrews
